"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES
OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed,
and the abundance and great variety of fish
contained.

BROOK TROUT abound in the streams, and
the famous AMERICAN GRAYLING is found
only in these waters.

THE TROUT season begins May 1 and ends Sept. 1.
THE GRAYLING season opens June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSK-
ELLER also abound in great numbers in the
many lakes and lakelets of this territory.

The sportsman can readily send trophies of his
skill to his friends or club "at home, as too for
packing fish can be had at many points.

PAKE YOUR FAMILY WITH YOU. The econ-
omy of the North Woods and Lakes is very beau-
tiful; the air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.
The hotel accommodations are good, far sur-
passing the average in this country, new enough to
afford the finest of fishing.

During the season Round Trip Excursion Tick-
ets will be sold at low rates and attractive train
facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
all risks.

It is a dream to make sportsmen feel "at home"
on this route. For Tourists' Guide (an attractive
illustrated book of 30 pages), containing full in-
formation and accurate maps of the Fishing
Grounds and Time Cards, address A. B. LEECH,
Gen'l. Pass. Agent, Grand Rapids, Mich.

Old Dominion Line.

THE STEAMER of this Line reach

GUNPOWDER.

**DUPONT'S
RIFLE, SPORTING AND BLASTING
POWDER.**

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING."
FG and FFG. The FG for long range rifle shooting, the FFG and FFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridges, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

**THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.**

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unequaled in point of strength and cleanliness. Packed in square casks of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. casks and 1/2 lb. kegs. A true grain, quick and clean, for upland and partridge shooting. Well adapted to shot guns.

Hazard's "Black Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. casks and 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFG, FFG, and "Sea Shooting" FG in kegs of 25, 50, and 75 lbs. and cans of 5 lb. FFG is also packed in 1 and 1/2 lb. casks. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard for Powder of the country.

Superior Mining and Blasting Powder.

Volume 14—No. 1.
No. 111 Fulton Street, New York.

"PRISONER'S DREAM" FALLS.

A DIM, half light hung o'er the glittering verge;
A murmur fluttered, faint and soft and low,
The indistinct, fond dreams of long ago
Came floating back, enwreathed in shadowy serge,
Of tangled mist. A solemn, sombre dirge
Rolled upward with a mournful cadence, slow,
Where down the double fall the steady surge
Flung out the jetting spray at every swoe
Of welling water. Draped in silent thought
Low-lying trees swung swaying shadows down
The rapids—down a foam-flecked, sinuous gleam,
Dipping their boughs carelessly, unsought.
Above, the grim rock's breathing sulcs frowned;
Beneath, the fleeing, phosphenescent stream.

August 7th, 1879. JOHN PRINCE TREE.

The East Branch of the Penobscot.

TWO HUNDRED MILES THROUGH MAINE IN A CANVAS CANOE.

FOURTH PAPER.

I OFTEN thought how easily one could stray from camp, and if without a compass, be lost in this wilderness. While hunting on Lake Superior, one autumn some years since, I endured such an experience, and the bitterness of it has always remained fresh in my memory. While passing over the corduroy road of thirteen and a half miles which lies between the town of Ontonagon, Michigan, and the Minnesota Copper Mines, my attention was allured from the road by the melodious whirr-r-r-r, whirr-r-r of a brace of partridges. Stepping aside into the thicket, I followed as fast as possible the retreating sound, and after a tedious tramp through briars and swamp, I finally brought them to bag. In the excitement of the chase I had given little or no heed to the path or to the clouds that were fast gathering overhead. Starting back in the direction I supposed the road, I travelled, it seemed to me, double the distance that would have revealed it, but no familiar path did I find—in fact, I was amazed in discovering that I was back on the same ground on which I had started. There was no reason in the thing, no reasoning against it. The points of the compass had been as clear in my head as if I saw the needle, but the moment I was back all seemed to be wrong. The sun, which occasionally revealed itself, shone out of the wrong part of the heavens. I climbed one of the tall trees, but the very stillness of the landscape on which I gazed seemed to mock me. I was not a novice in woodcraft, and could follow a trail readily. I examined the bark of the trees to see which side was the roughest, and then singling out a number, judged of the point of the compass the majority leaned, and plunging into the thicket, made another and another attempt. I well knew the danger of losing my self-control, and sitting down on a rotten log, I covered my face with my hands, and waited until I felt calm and self-possessed again. I have no idea how long it was, but when I arose the sun was nearly obliterated by the clouds, which soon began to discharge their contents, in sympathy for my ill-luck, and to reach my destination I must make all speed.

I immediately struck a "bee line" in the direction which my reveries had designated as the right path, blazing the trees with my hunting knife as I hastened along. Soon I espied an opening, and dashing onward, what was my joy to find the old corduroy road, which never looked more welcome in its life.

From Grand Lake to the junction of the East with the West Branches of the Penobscot it is sixty to sixty-five miles, the river being shut in on all sides by lofty mountains or heavy belts of grand old forests, through which the swift river tumbles, with only an occasional suggestion of the lumberman's axe. There are eleven conspicuous falls in this interval, varying from twenty to sixty feet in height, while the charming cascades are too numerous to mention. The abrupt descents have the names of Stair, Haskell Rock, Grand, Pond Pitch, Huling Machine, Bowlin, Spring Bivouac, Gravel Bed, Whinstone, Grindstone, Crowfoot and Lodge Falls, their names in many cases suggesting their wild and rugged formation.

The water swept so swiftly through this section that, with the exception of the last twenty miles, it was

hardly necessary to use our paddles, but keeping an eye to the rocks in our path we could silently enjoy the many lovely changes constantly opening in the landscape. But this also was decidedly the hardest part of the entire excursion. At most of these falls our whole camp equipage, provisions and canoes had to be "sacked" around the falls from one to two miles, and in many cases there was hard climbing along the steep, rocky sides of the mountains which followed the river's course, while each one of us carried his portion of the load.

For two and a half miles, after leaving Grand Lake, one is constantly reminded of the day's experience on Webster Stream, by the furious rapids, and we were again obliged to call into action our "setting poles." In a drenching rain, we were compelled to land on the shore, take the canvas boat into our laps and row the cuts in its surface, laughing at the philosophical manner we submitted to the circumstance. Along the river's bank to the west for many miles, are the lovely Traveler Mountains, whose rambling appearance and daily companionship are fully represented by their name.

Stair Falls, the Quartermaster and myself ran in our canvas canoe, but the guides tending their birches as if they were glass, dropped them from step to step by means of ropes. This fall or cascade is a series of steps or stairs, some five in number, each about three feet high and two feet apart, the best passage being through the channel near the left bank. It is a very choice bit of scenery, and one that any artist would greatly desire to transfer to canvas and work into endless variety of composition. A ten mile passage of the swift river, and we reached Grand Falls, which although higher than its namesake on Webster River, being followed immediately by numerous cataracts, did not so impress one. Here we were obliged to make a portage of three-quarters of a mile, through the dense woods to the foot of the falls, and in a heavy shower went into camp on the opposite shore. To the "camper-out," a rainy day in the woods is among the most disagreeable experiences, even under a tight tent, good company and plenty of amusement. But increase the difficulties by being forced to be out in the storm, and to leave your canoe at a portage and obliged to carry on your back through mud and mire all your camp effects. Through the woods you stumble, pressing the wet branches aside, which, in their recoil, push away your rubber clothing from which the buttons are fast disappearing and the rents appearing, and whose special protection is sadly deficient, until repetition of such circumstances as thoroughly drenches you as if you had been without them. The water is dripping from off your hat to your neck and rolling down your back in icy rills. The position of your arms in carrying your "kit," are such as to lead a looker-on to imagine you are straining hard to fill your sleeves with the rain, which you know is a mistake—but there is no help for it. You clutch tightly to your rifle, as your pack begins to slip, striving to keep the looks from the rain, while your boots have been innocently occupied in catching every scanty drop which fell from your clothing and you have every feeling, if not the appearance of the oft quoted "drowned man." You wouldn't have your wife or other friend see you at this moment for anything. How they would laugh and hurl at you many of your pet quotations regarding the "poetry, pleasure and romance of life in the woods," until you had rather endure another storm than their irony.

Then the raising of the wet tent into position, the repeated attempts to start the fire, and the holding of every individual fir branch to dry in the flame, before performing the duty of bed. Two forked sticks, with one across, are placed before the fire, and on them you hang boots, socks, blankets, and other articles of your belongings; and while the guides are cleaning your guns you examine the provision boxes to see if they have escaped the drenching. It is amusing how stoical and indifferent one grows to these circumstances in the woods, and soon makes but little of them, retaining as serene and untroubled a disposition as if they were of no account, while after a warm supper and a social pipe they pass from memory.

I will not weary the reader by a description of the passage of each fall from day to day on our route, some of which we ran and past others we "carried," letting the canoes as before over the difficulties by long poles from the cliffs above. After passing Spring Brook and Gravel Bed Falls we paddled through a mile or two of heavy "rips" and entered some two miles of "dead water."

On turning a beautiful bend in the river, what was our surprise to observe the rugged growth of pines gradually disappear and the landscape immediately softened by the introduction of a dense forest of maple, elm, ash, and noble oak trees, whose garlands thus passed themselves far into the stream, their branches overhanging above our heads forming a canopy that darkened the water.

Exclamations of surprise rang from our lips as all the canoes in "Indian file" drifted through this enchanting bower, and we thought to ourselves if in the quiet dress of summer this is so lovely, what must it be when robed in autumnal foliage. Passing the mouth of big and little Sebosis rivers, we pitched our tent on the left bank of

the river near a place known as Hunt's Farm. The solitary log-house and barn of Hunt's Farm were erected some forty-three years ago, and are located on high ground in a picturesque bend of the Penobscot River.

The house outside is painted red, whitewashed inside, with low ceilings, similar to the others mentioned. In addition to the cultivation of land near the house, an attempt was made some time ago to press into tillage as a melon patch the side of an adjacent mountain. But the fruit, as soon as they grew heavy and ripened, snapped their hold on the vines, rolled down the mountain side and were crushed at its base. As can easily be seen, this elevated farm was not a success; and now only the bright green foliage of a fresh growth of trees is left to tell the melancholy story. Mr. Dunn, who, assisted by three other persons, takes care of the place, showed us many attentions, supplying us with fresh milk and sugar and other delicacies that had been foreign to our fare at camp for many days. The manufacture of birch canoes seemed to be one of the industries of the place, an immense one being then in process of building for a celebrated New York artist, Frederick E. Church, Esq. This canoe was twenty-eight feet long, over four feet wide (midships), and when completed would weigh three hundred pounds.

The artist had recently purchased four hundred acres of land over on Millinocket Lake, fifteen miles distant, a tributary to the West Branch of the Penobscot River, one of the prettiest sheets of water in that vicinity. A fine view of Mount Katahdin can be had from this spot, and men were to leave this farm the following day to erect there substantial log cabins.

The ascension of Mount Katahdin can with little difficulty be made from Hunt's Farm, where a convenient ride on horseback lands you within two miles of its top. I shall not forget the climb of Hunt Mountain, about twelve hundred feet high opposite our camp, nor the magnificent view from its peak.

With Mr. Dunn as guide, in company with the quartermaster, I started to make the ascent on the morning of August 24th. To clamber up the steep side of a mountain in the dense wilderness is an entirely different undertaking from the following of a "birdie path" to the top of Mount Washington. Cutting stout poles, seven feet in length, we set off up the mountain side, catching half glimpses of the landscape below, as we swung from tree to tree, and rock to rock, which latter had been made extra slippery by a recent shower, and after two hours of laborious climbing gained the bare but welcome crags at the top. The first sensation of the prospect from the summit, is simply of immensity. The eye sweeps the vast spaces that are bounded only by the haze of distance—no vast undulating sea of forest trees, which seemed to come rolling in to the mountain's base, with only here and there the glimmer of a lake or stream, and little to break the vision save the farms at your feet, where we could just distinguish the white canvas of our camp. To the left stretch successive ranges of hills and mountains, and at their feet could be had momentary glimpses of the windings of the West Branch of the Penobscot, while to our right was its twin brother the East Branch, over which we had so recently passed, its misty falls and cascades subdued to a level with the surrounding landscape. These two streams sweep away to the south twenty miles, and unite in unbroken union at Medway on their way to the sea. Before me arose the cloud-capped peak of Mount Katahdin, 5,385 feet high; Vassataquoik Mountain, 5,245 feet high; the lofty Traveler and Sourdunk Mountains, which, with the exception of the first, are welded to their summits. Broad scars or slides are visible along the surface of old Katahdin, which with its triple peaked outline seemed to look down into the valleys with a fatherly interest. The thunder clouds had just parted and a beautiful rainbow arched the heavens, shedding its colors on the glistening outlines of valley and mountains. Oh! that we might be left alone for hours to watch the changes of the landscape, and hear the secret voices and dread revelations of these magnificent mountains.

There are thoughts deep and holy which float through one's mind as, gazing down upon such a scene, one contrasts the smallness of man with the magnitude of God's works, and in the weird silence contemplates the perishable of this world with the everlasting hills. After such a prospect of the East Branch of the Penobscot, while on our way to the summit, I bid adieu to this enchanting river, our narrative, but if the future tourist still desire to make its acquaintance I would like to guide him safely over four other remarkable falls to his journey's end at Mattawamkeag, thirty-two miles below.

Two miles from Hunt's Farm we came to what is known as Whetstone Falls, a series of high picturesque cascades. Here we made a short portage on the right, as soon as if we ought to have shot across and down a hard steep pitch of the water close to the left bank and landed a portion of our baggage, which we carried to a point below. Then the guides ran the heavier part of the falls, and after passing the quick boiling water at their foot rounded to the shore and reloaded the camp kit, which we had "sacked" over the ledges at the river's bank. Then we passed without accident Grindstone and

Crowfoot Falls, each from ten to twenty feet high, the name of the former being so suggestive by its geological formation that the Quartermaster declared that he could honestly see the indentation of the axle. Another camp seven miles from Melway, and in the morning we passed Ledge Falls, which although the last of the pitches on the East Branch, was none the less interesting. We passengers, to lighten the canoes, strolled along the shore gathering bright flowers and curious colored stones, while the guides, alone in their canoes, ran the cataraict, meeting us in the dead water below. These falls are composed of slate of a greyish color, which after the first steep pitch form into numerous cascades, produced by the sharp ridges of rock which, extending out into the stream from both shores, decrease in height as they approach the center. A dark red stone attracted my attention and I waded into the water to secure it, and on regaining the canoe soon after I threw it into my camp bag. Little dreaming of the value of my prize. On reaching home it was examined by an old and experienced lapidary, and proved to be one of the finest pieces of jasper ever found in this country. A portion of the stone as an article of jewelry encrusted with the magic words "Ledge Falls," is highly prized and now worn as a souvenir by the writer.

The stream now gradually widens, with a strong but noiseless flow, the mountains retire, and the banks of the river are for the most part bordered by foot-hills and grassy knolls. Glimpses of civilization begin to dawn as we occasionally pass a log-house whose lonesome appearance is only relieved by the happy faces of children at the door. Corn fields where their tall stems, while broad patches of potatoes (for which Maine is justly celebrated) flourish here surprisingly. It is a sudden change from the forest depths, after a month's camp life, and seems to urge us towards home more and more avidly. We are soon at the junction of the East and West Branches at Medway (a small town on the left bank of the Penobscot River, of about four hundred inhabitants), and are speeding still faster and faster through the broad river to Mattawamkeag on the European & North American Railroad. We have followed the river in its devious windings, from a width of fifteen to now an expansion of over five hundred feet. We have felt the mysterious silence of the wilderness at early morn, or as the twilight lessened and the shadows deepened about the camp, only broken by the chirp of the cricket or the weird and plaintive cry of the loons on the lake.

Our tour has been one of daily excitement filled from first to last with grand old forests, noble waterfalls, picturesque lakes and cascades; a region in which an artist might linger many weeks with profit to both eyes and brush, while the recreation to one's health by the out-of-door life in the dry atmosphere cannot be over-estimated. Springing ashore we unjoint our rods, pack up the camera, collapse the canvas canoe, and with hearts full of thanks to the kind Providence which has watched over our two hundred mile voyage, we bade adieu to our guides, as we do now to the reader.

THOMAS SEDGWICK STEELE.

A WINTER IN LOUISIANA.

TO those who dwell in high latitudes, and among hills and mountains, the first sight of "Tuckepaw" Country, is simply a revelation.

Imagine a low, flat meadow-like land, threaded by innumerable streams and dotted with millions of tiny lakelets, all of which stream and lakelets have a common parentage in some huge, monster-like reservoir; all lying in a shining bright in the rays of the winter sun, and all seeming to lead an aimless existence, and all running nowhere, and all likewise ending nowhere.

Such is the Atchapakas County, corrupted into "Tuckepaw," as I saw it one bright winter morning in the year of our Lord 1859.

Three years of my hard work in the school-room, supplemented by the wish to become thoroughly acquainted with Blackstone, Chitty, Greenleaf, and other masterly files of the legal persuasion, had so shaken me physically, that I gladly accepted an invitation from a great-uncle to recuperate myself by shooting and fishing in Louisiana for a whole winter.

"Behold of me then!" as our lively French friends say, on the good steamer *Elephant*, flying on the wings of steam away from the high and rugged regions of the North to the soft skies and Italy-like weather of Southern Louisiana.

Our boat was crowded with the usual motley crowd that could then be found on every steamer running on the Mississippi, from the planter who made five hundred bales, haughty, cool, and contemptuous, down to his humble compeer of five bales, ignorant, excitable, and humble.

I am sorry, alas, to record that there were many rogues, negro dealers, and gamblers, men who, at the South, have ever been regarded as *chevaliers d'industrie*, that is, gentlemen who live by their wits; exploiters, who lived like princes to-day, blazing in diamonds, and to-morrow, so poor as not to have money to buy a single meal.

After the first day or two on a steamer, there are naturally formed little cliques of those who are regarded as taste and sentiment. Among those whose acquaintance I formed was one of the most agreeable, the most economical, the most lovable man that I have ever been my good fortune to meet. Dr. C., of Mississippi—I wonder if he still lives. Should he be alive, and see these lines, he will know how much the "Major" loved him. God bless him I real, true gentleman!

Dr. C. was a little deaf, and was a source of inexhaustible fun to me, and long imaginary conversations which I carried on with him, as if he were a living man. I am sorry to say, wanting in the attic salt of the *Acetes Ambrosiane*, but with enough of malicious personality to cause the Doctor's black eyes to snap, and his long black beard to curl, a sure sign of anger in him.

Then when any of the parties whom I had so wilfully maligned showed any weakness (let us say an amiable weakness) the Doctor would come up to him, and with african iron lying in his eye for his prey, and crunch his bones in a linguistic way, so that the innocent victim felt very much indeed.

The Doctor was very fond of card playing, and he and the mate of the boat, a burly, coarse fellow, would often play euchre by the hour. The mate was a bulky and a

coarse—no unusual combination. It was during one of these nocturnal orgies, prolonged until the "we sma hours ayaat the twa!" that the Doctor had very unceremoniously given the mate the lie. Now, I have not the least doubt that the mate lied. Indeed, I am certain that he lied, but at that time in the South every fellow tried to consider himself the equal of every one, and tried very hard to make himself and others believe that he was a gentleman. In fact, most of the street fights and bloody encounters were with men of this class, who having no education and no refinement, tried to substitute the pistol for good manners, and often succeeded in literally shooting their way into good society. The mate was ambitious, and as it was the first time that he had ever sat down with gentlemen, now was the time to cover himself with glory.

What was my astonishment next morning, after breakfast when Dr. C., after giving me a graphic detail of what had transpired the night before, I asked him to stand as his second in a duel with the mate which had been arranged to come off at Baton Rouge. I agreed readily to act as the Doctor's second, with a mental reservation that he should never meet the mate, bully, coward, and no gentleman, if I could by any means prevent it. At that time I was a crack shot with revolver, rifle, or shot gun. I owned a pair of Colt's heavy revolvers, with which I could practice, and I could shoot out to be first a silver half dollar every time. At the next wedding station, seeing the mate on shore directing the sable crew in their loading the wood, I buckled on my revolvers and strolled carelessly up the bank and entered into conversation with the mate.

About thirty or forty yards from us was a dead oak littered over with wild pigeons. These birds, after they have given themselves up as accursed, are very tame, and often allow several barnyard hounds to be first among them before they will fly. Calling the mate's attention to these birds, I asked him if he could kill one of them with a revolver. "No; and many man on yearth kin do it," was the immediate reply. Asking him to pick out a bird for me, he very sullenly said: "That'n pickin' hisself will do." Hardly had he spoken when the identical bird fell headlong to the earth. Accidental by no means, I must have shot him. I select another, and, as before, the bird fell to an unerring aim. Two more, and the frightened birds sailed in a dark blue column across the river. "Now," said I, "you know well why I have shot those birds." The trembling limbs, the pallid countenance, and the broken, disjointed utterance but too plainly told that he did know. In the most cheerful manner I assured him that if any barn should befall the Doctor who, he well knew, couldn't hit a barn with a revolver, that I should be compelled, in the interests of good society and friendship, to avenge his death. I further assured him in a friendly way that the shooting which he had just seen me do was a mere bagatelle; that at ten paces, at the word, I could drive the head of a tack into a board every time. I entreated him to throw up a half dollar, that I might shoot him some good shooting—good shooting, that he might remember. But he was effectually cowed, and heaving a sigh at my new challenge, and the good Doctor never knew the reason.

But, bless my soul! I started to tell of a winter in Louisiana.

It was on a bright winter morning, then, that pulling aside the blinds of my window, I looked out over the broad waters of a lake that lay glancing and sparkling in the morning sun. Myriads of wild fowl were dispersing themselves in its water, and I could at thirty yards hit the rear of a shot gun. Two pretty little skiffs lay dancing up and down upon the mimic waves, while innumerable *bateaux* and "dug outs" completed the marine force, or army of the lake.

Dressing myself, I hastened—down stairs, and on the landing below found my uncle, aunt and cousins waiting to greet me, and make me feel at home. In ten minutes I felt perfectly at home, and I was soon established as *ami de maison*.

My uncle and married, years before, a lady of French extraction. His career had been, in old Kentucky, a not infrequent one. Born to immense wealth, fine horses, dogs, guns and cards had absorbed it all, and Uncle Gus woke one fine morning to find himself a ruined man. The Cotton States at that time were the refuge of ruined Kentuckians, whose general names, whose general *bona fides* made them favorites in every circle. My uncle had resolved upon a new start in life, and as a preliminary had married a French heiress. So well had he prospered, that when I came to Louisiana to spend my winter, he owned three plantations and about two hundred and fifty negroes. I say "about," for what Southerner ever knew his exact number of "niggers"?

My aunt's father had been a nobleman of the old regime in France, and very stately and proud, yet with within a kind heart let these lines bear witness. Three stalwart sons and two blooming daughters completed the household; the sons, taught in all field sports and French; the daughters, as was usual in the South, taught much more, yet modest and untaught as children.

Surely, thought I, as I sat down to my first breakfast, "my lines are cast in pleasant places."

A saddle of venison, a pile of roast beef's dinner, broiled *leccas* or *laid*, duck, fried perch, corn cakes and *gufs* *a laide*, made up a most appetizing breakfast to which I did full justice. Here for the first time I saw flowers on the table at breakfast.

I had brought my own gun with me, a Westley-Richards, No. 12, a large gauge at that time, a hard hitting, close shooting weapon, superior in all things to the modern breech-loader, except in facility of loading. My cousins had guns of that make, sawed blade guns, though, but also got shaky and unreliable at more than fifty yards. We spent that day upon the lake and I am ashamed to say how many ducks fell to my gun. Suffice it to say that it was slaughter. Thousands upon thousands of ducks, brant and geese were continually circling over our heads, and he had but small skill in shooting who could not have filled his skiff, much less game bag, in a day's shooting.

Nowhere in the world can there be found such fine shooting and fishing as can be found in the lakes and bayous of Southern Louisiana. There is something appallingly grand about some of the lakes. Giant cypresses, wreathed in their towering summits with the funeral-looking gray moss, stand like pyramids rather than trees, while the wind waving the moss gives it a fantastic and

weird resemblance at a distance to floating banners, or the sides of great phantom ships gliding along noiselessly far away over the sea. Then the streams, too, are dark, secret and mysterious, seem to hold within their somber depths of dread secrets, dark, unfathomable, appalling. Then, too, the forms of animal life are as varied as the scenery. Rank upon rank in serried columns stand the roseate spoonbills and the crested crane, melancholy, sedate and silent. Squirrels, black, red and grey, jump from tree to tree and violently scold the intruder upon their domain, long held by prescriptive right; alligators, widely and deceptively smiling, bask in the sun, and upon thousands of decaying logs, or swim along lazily, the tips of their noses just above the water, looking like old stumps or huge limbs of trees. During this same winter I had an adventure with their alligatorships which nearly cured me of all desire to hunt them. One fine evening my cousin Herbert proposed that we should ride over to a lake some miles distant where we had never before visited. Taking our rifles, we were soon on the point of a voyage to the lake. On our way thither my cousin informed me that the alligators in that particular lake, from some cause, were the most ferocious that he had ever seen. There were wild stories afloat among the negroes, he told me, of a cruel planter who made his refractory slaves wade into the lake and fight the alligators, and that the slaves were killed and eaten. "They certainly have had a taste of man," said Herbert, laughing, "and you must watch out, for they are the biggest that I have ever seen, and the most of them." Presently we came in sight of the lake, of which, from its very singular appearance, I often dream to this day; Imagine a deep circular basin lower than the lowland around it, containing perhaps a thousand acres.

Not a tree could be seen in the lake, but its banks were thickly clothed with gigantic, funeral-looking pines, waving their banners of Spanish moss in the still evening air. Dark, deep and sullen, it seemed a fit abode for monsters of all kinds. Dismounting at some distance from the lake, for fear that the alligators might eat our ponies, we walked down to its banks. Never shall I forget the sight that met my gaze. On every log and their thousands of limbs there were alligators—a very numerous of alligators. Cold and shivering, we looked at the waters themselves, the whole scene seemed the realization of a horrid dream. The alligator is a very tenacious animal of life, and nothing less than a half ounce ball planted in the eye or under the foreleg is immediately fatal. That they eat each other I do not aver, but that they will tear wounded ones to pieces, I know. My cousin Herbert seeing some of the maws of the alligators on the opposite side of the lake, left me, and I walked out across the lake upon two huge cypress that had fallen across each other, and from that vantage ground I opened the battle. At first I shot very coolly, and every shot told, but hundreds of others, attracted by the smell of blood, lashed the water into foam, and rising beneath my very feet glared at me with hungry, baleful eyes, as if they would like to tear me to pieces, as they did with their wounded companions.

At last this made me a little nervous, and having made a shot at one very large, vicious-looking fellow, which only enraged him, while loading my rifle I saw a huge one on the log behind me. Inch by inch the dreadful reptile crept toward me. My hands trembled so that my fingers would not hold the percussion cap which I vainly tried to put on the tube. Another moment, and I would have been a meal for the monster, and would have been every inch of the lake to be torn into pieces by the hungry monster, who seethed and boiled at my feet. At this instant the sharp crack of a rifle rang in my ears, and I saw—yes, literally saw the ball strike the monster in the eye, and the next moment he fell dead as a stone from the log. To hurry to the shore, to grasp my cousin's hand, to thank him for my life, released from a death too horrible to contemplate, was the first thing that came into my mind. On our way home he told me that when a boy, shooting alligators in this lake, the party had been compelled to desert, for the alligators pursued them on land. From that eventful evening I lost all desire to hunt alligators; and except an occasional shot at one who was too saucy, I continued my shooting during the rest of my stay to legitimate game.

It was in a corner in which the deer had been almost exterminated, the number and beauty of these interesting animals was ever a wonder and a joy to me. You might ride through the tall and matted grass for hours, and perhaps not see a single deer; yet, at the crack of a rifle, you could see many hundreds of heads peering above the tall grass and weeds, seeking to ascertain your exact location.

Well do I remember my first deer hunt. Though every one in that county practised "still" hunting, or stalking, my cousins, Herbert and Robert, had procured a small pack of deer hounds of the old Virginia breed, short-legged, deer-lapped, large bodied dogs, whose ancestors had doubtless pulled down many a gallant stag in merry old England.

Everything having been arranged the evening before, at an early hour in the early morning you are roused from sweet dreams by a bright light in your eyes, and a gentleman of the African persuasion demands in the tone of a privileged domestic: "Is you gwine deer drivin' dis mawnin'?"

As a dim remembrance of the enthusiasm of the previous night, stimulated doubtless by my uncle's fine claret, dawns upon you, you hurriedly don your shooting jacket and go down. A substantial breakfast, but no minutiae, for your hand must be steady, to-day with the wild blast from a hunting bugle, and a chorus of yells from the dogs intermingled with the shrill cries of all the little niggers on the place; with a wild whoop and a sweeping gallop, we are all off to the hunting grounds.

Faint streaks of the rosy dawn light up the eastern sky as you are posted at your "stand" on the banks of a wide, deep stream, and you are in a constant whisper that somewhere as many as twenty deer dash through that place in order to cross the stream and get away from the deep mottled thunder that so fiercely and relentlessly pursued them behind. Shivering to your very marrow, for the morning air here is cold, you sit down on the gnarled root of a huge magnolia and try to think of all the good you have done and all the evil; unsatisfactory book-keeping, with a little grace on the wrong side; so you stop that and recall all the things you have ever read of deer hunting. "Chevy chase, chevy chase!" the refrain

Mr. S. D. Osborne read a list of birds of the order Raptores, which spend the breeding season on Long Island, in which it was noted that the mottled owl, marsh hawk, sharp-shinned, coopers, red-shouldered, red-tailed, and fish-hawks breed with some regularity; the great horned

long-eared and barred owls, the broad-winged and sparrow hawks, and the white-headed eagle breed rarely, while no positive breeding record was given for the short-eared, or Acadian owls.

Mr. L. S. Foster read a list of birds observed the past season near Cloister, N. J., on the Hackensack River, and at Greenwood Lake. Among these the chewink (*Pipilo erythrophthalmus*) was mentioned as having been captured Feb. 23d, 1879. Mr. C. H. Eagle read a paper reviewing our present knowledge of the pallid sparrow (*Passerculus princeps*), and mentioning the capture of two specimens at Rockaway, L. I., January, 1880. Mr. Eagle, though recognizing the conspicuous characters of the bird, was inclined to favor the view of its being a variety of *P. savanna*. Ten specimens of this sparrow are now recorded from Long Island, the most southern point at which it has been detected.

NOTES ON SOME BIRDS BREEDING IN COLORADO.

The following brief notes are from observations made during the season of 1879 in the vicinity of the Goodnight Ranch on the Arkansas River, five miles above Pueblo.

I have included in the list only such species as were actually seen breeding. The number of species resident during the spring and summer in the locality is comparatively small, but the greater part of those breeding are very common:—

Turdus migratorius—Robin; common; breeds.
Minus polyglottus—Mocking-bird; breeds abundantly; usually nests in a cactus or a cedar.

Stalia arctica—Arctic blue-bird; a few pairs observed breeding in holes and crevices in the rocks; a nest found April 30th in a hole in the side of a stump was built of grass, and contained five young birds just hatched.

Poliophtila cerulea—Blue-gray gnat catcher; found a nest in a cedar, June 22d, containing two young and a cow-bird's egg.

Salpinctes obsoletus—Rock wren; breeds in great numbers in holes in banks and crevices in rocks. A nest found, May 22d, in a hole in a bank, was placed three inches from the entrance, and built of grass lined with horse hair. It contained six eggs.

Dendroica aestiva—Summer yellowbird; breeds commonly in the river bottom.

Icteria virens, var., *longicauda*—Long-tailed chat; breeds abundantly. Nests in the low bushes along the river. First nest with eggs taken June 2d; usual number of eggs three—occasionally four.

Hirundo horreorum—Barn swallow; a few seen breeding about buildings.

Petrochelidon lunifrons—Eave swallow; breeds in large colonies on the rocky sides of the bluffs along the river.

Collurio ludovicianus, var., *occubitoroides*—Whiterumped shrike; breeds commonly among the cedars on the bluffs.

Carpodacus frontalis—Crimson-fronted finch; breeds in great numbers; nests in trees, cacti and old barn swallows' nests.

Chrysomitris psaltria—Arkansas goldfinch; a few pairs observed breeding; a nest found, June 21st, was about five feet from the ground in the forks of a limb of a small elm. The nest was built of fine grass and weeds, mixed with cottonwood down and lined with the down and fine strips of grapevine bark. It measured two and one-half inches in diameter outside; and one and three-fourths inches; depth outside, two and one-half inches; inside, one inch; eggs five, similar to those of *C. tristis*. Sept. 18th I found a nest which the young birds were just leaving.

Pooecetes gramineus, var., *confinis*—Western grass finch; breeds in great numbers. I found one nest in a cactus a foot from the ground, and another in a cedar six feet from the ground, built on top of an old mocking-bird's nest. One set of five eggs taken.

Goniapha melanocephala—Black-headed grosbeak; a few seen breeding.

Cyanospiza amoena—Lazuli finch; breeds abundantly. *Pipilo fuscus*—Brown towhee; common resident throughout the year; usually nests in a cactus. One found, April 29th, was placed in a cavity in the top of a dead cedar eight feet from the ground. Nests built of weeds and grass and lined with hair. Eggs, three; one laid each day until the set is complete.

Agelaius phoeniceus—Red-winged blackbird; breeds in great numbers along the river.

Icterus bullockii—Bullock's oriole; breeds abundantly.

Pica hudsonica—American magpie; breeds commonly; usual number of eggs, seven.

Tyrannus carolinensis—Kingbird; common; breeds.

Tyrannus verticalis—Arkansas flycatcher; great numbers breed.

Chordeiles virginianus, var., *henryi*—Western night-hawk; very common; breeds.

Coccyzus americanus—Yellow-billed cuckoo; one nest with two eggs taken.

Melanerpes erythrocephalus—Red-headed woodpecker; rare; only one pair seen breeding.

Colaptes auratus—Red-shafted woodpecker; breeds commonly. Took five eggs from a hole April 27th, and May 4th took seven more from the same hole.

Falco sparverius—Sparrow hawk; common; breeds in holes in trees and crevices in rocks.

Zenaidura macroura—Carolina dove; very common; breeds.

Agelaius vociferus—Killdeer plover; breeds abundantly in the river bottom.

Thalassidroma n. l., Jan. 7th, 1880. HERMAN W. NASH.

THE BIRDS OF CHESTER COUNTY, PA.

BY R. HARRY WARREN.

(Continued.)

76. *Dendroica virens*, Baird—Black-throated green warbler; common migrant; arrives May 2d to 10th.

77. *D. townsendi*, Baird—Townsend's warbler. Of this species in Chester County little is known. Mr. C. D. Wood, of Philadelphia, May 12th, 1883, killed near Coatesville, Pa., a male of this species. The specimen was sold to Mr. Turnbull, of Philadelphia, and after his death was purchased by Barney Hoopes, Philadelphia. The bird, I have been informed, is now in possession of John Krider, Philadelphia.

78. *D. canadensis*, Baird—Black-throated blue warbler; common migrant; arrives May 8th to 12th.

79. *D. coronata*, Gray—Yellow-crowned warbler; common migrant; arrives April 7th to 15th.

80. *D. blackburni*, Baird—Blackburnian warbler; somewhat rare; arrives May 6th to 25th. Mr. William E. Hughes, of Phoenixville, Pa., has a nest and three eggs taken in this county. A letter sent me by Mr. Hughes contains the appended mention relative to the find: "The old birds were not shot, but were seen at a very little distance, and there can be no possible mistake."

81. *D. castanea*, Baird—Bay-breasted warbler; irregularly rare; arrives April 27th to May 14th.

82. *D. pensilvanica*, Baird—Chestnut-sided warbler; arrives May 4th to 15th; numerous migrant. I saw two of these birds the 23th of June, 1879; another was observed July 1st. The plumage of the first-mentioned appeared worn. From this fact, as well as the late occurrence, I am inclined to think they occasionally breed here.

83. *D. cerulea*, Baird—Cerulean warbler; rare migrant, arriving May 1d to 12th.

84. *D. striata*, Baird—Black-poll warbler; abundant migrant; arrives May 18th to 25th.

85. *Dendroica aestiva*, Baird—Yellow warbler; common; arrives May 1st to 10th.

86. *D. maculosa*, Baird—Black and yellow warbler; migrant; irregularly abundant; arrives May 10th to 18th.

87. *D. tigrina*, Baird—Cape May warbler; rare migrant; arrives May 6th to 20th.

88. *D. palmarum*, Baird—Yellow-red poll; abundant migrant; arrives May 10th to 24th.

89. *D. superciliosa*, Baird—Yellow-throated warbler; very rare migrant.

90. *D. discolor*, Baird—Prairie warbler; rare migrant, arriving April 25th to May 7th.

91. *Myiobites tristis*, Aud.—Hooded warbler; rare; May 5th to 10th.

92. *M. pusillus*, Bonap.—Green black-cap flycatcher; frequent; arrives May 24 to 12th.

93. *M. canadensis*, Aud.—Canada flycatcher; common migrant, arriving May 3d to 14th.

94. *Setophaga ruticilla*, Sw.—Redstart; common migrant; April 21st to May 10th. If I remember correctly, a nest of this bird was found and reported in the FOREST AND STREAM (date not known) by a gentleman residing in Kenneth Township, Pa.

95. *Pyrrhula rubra*, Vieill.—Scarlet tanager; abundant; arrives April 25th to May 9th; remains as late as Oct. 5th.

96. *P. aestiva*, Vieill.—Summer red warbler; accidental visitant.

97. *Hirundo horreorum*, Barton—Barn swallow; abundant; reaches us April 15th to 20th.

98. *Hirundo lunifrons*, Fay—Cliff swallow; abundant; arrives April 28th to May 3d.

99. *H. bicolor*, Vieill.—White-bellied swallow; abundant during migration, but not common during the breeding season; arrives April 9th to 15th.

100. *Cotyle riparia*, Boie—Sand swallow; abundant, arriving April 21st to May 4th.

101. *Cotyle scriptum*—Rough-winged swallow; occasional, arriving from April 25th to May 1st. Mr. J. Hoopes Matlack thinks he has found the nest of *scriptum* in Chester County.

102. *Progne subis*, Baird—Purple martin; abundant; March 21st to April 1st.

103. *Ampelis cedrorum*, Baird—Cedar bird; winter resident; no doubt breeds; gregarious.

104. *Collyria borealis*, Baird—Butcher bird; winter resident, frequent; arrives in October, departs by April 25th, mostly earlier.

105. *Vireo olivaceus*, Vieill.—Red-eyed vireo; abundant; arrives April 19th to May 1st.

106. *V. gilvus*, Bonap.—Warbling flycatcher; common in spring and fall; arrives April 25th to 30th.

107. *V. noveboracensis*, Bonap.—White-eyed vireo; frequent; occurs May 1st to 5th.

108. *V. solitarius*, Vieill.—Blue-headed vireo; somewhat scarce; arrives April 20th to May 4th.

109. *V. flavifrons*, Vieill.—Yellow-throated vireo; common migrant, arriving May 1st to 15th.

110. *Minus polyglottus*, Boie—Mocking-bird. This species formerly bred in this county, although I have no reason to believe that it does so now. To Mr. Benjamin M. Liverhart, a gentleman who has devoted some forty years to the study of the natural history of this section, the writer is indebted for the subjoined mention of this bird. About 1859 several birds of this species built nests and reared young, for two or three consecutive years. In those hedges, on the property of the Misses Bennett. Having seen the statement that the mocking bird will not breed in confinement, I would say that Mr. Liverhart has had them breed repeatedly in captivity.

Mr. polyglottus in this county may be considered as occurring only in the past; even as a wandering visitor it has not been seen for years. Nov. 24th, 1879, a specimen (?) was taken on the "Barrens" north of West Chester, but judging from the somewhat worn tail and late occurrence I am forced to think the same an escaped captive.

111. *Minus carolinensis*, Gray—Catbird; abundant; breeds; arrives April 28th to May 8th.

112. *Harpophynchus rufus*, Cab.—Brown thrush; abundant, breeds; arrives April 24th to 30th.

113. *Tyrannus ludovicianus*, Bonap.—Great Carolina mocking wren. Winter resident; not common.

114. *T. bewickii*, Bonap.—Bewick's wren; "very rare."

115. *Citellus palustris*, Cab.—Long-billed marsh wren. "Summer resident; frequent about marshes; insectivorous. Feeds on aquatic insects and others which frequent wet places." (Michener). This species we have never seen; Vincent Barnard, who lived not very far from Dr. Michener, did not encounter this bird, at least until after 1861, as his catalogue published in that year did not contain it.

116. *C. strigatus*, Cab.—Short-billed marsh wren. It has never been our good fortune to meet with this bird, yet Michener speaks of it as a "summer resident; frequent." Barnard, however,

states that it is "very rare."

117. *Troglodytes*, Adon.—House wren; abundant; arrives April 25th to 30th.

118. *T. hyemalis*, Vieill.—Winter wren; common in winter; arrives Nov. 15th to 30th.

119. *Certhia americana*, Bonap.—Brown creeper; frequent; winter resident.

120. *Sitta carolinensis*, Gmelin.—White-bellied nut-hatch; common resident.

121. *S. canadensis*, Linn.—Red-bellied nut-hatch; rare; winter resident. I know of but one specimen taken within the confines of Chester County.

122. *Poliophtila cerulea*, Solat.—Blue-gray gnat catcher; April 15th to 25th.

123. *Lophophanes bicolor*, Bonap.—Tufted titmouse; frequent; resident.

124. *Parus atricapillus*, Linn.—Black-capped titmouse; somewhat common; resident.

125. *Parus carolinensis*, Aud.—Carolina titmouse. I have been informed that Livingston Hartman, M. D., formerly of this borough, took eggs and specimens of this species near Darlington's Corner, Pa.

126. *Eremophila cornuta*, Boie.—Shore lark; winter resident; somewhat common; gregarious.

127. *Pinticola canadensis*, Cab.—Pine grosbeak; rare; winter visitant.

128. *Carpodacus purpureus*, Gray—Purple linch; common; spring migrant; arrives April 15th to May 1st; sometimes winter resident.

129. *Chrysomitris tristis*, Bonap.—Goldfinch; abundant; resident.

130. *C. pinus*, Bonap.—Pine finch; rare; winter visitant.

131. *Curvirostra americana*, Wilson—Red crossbill. During severe winters is sometimes seen.

132. *C. leucoptera*, Wilson—White-wing crossbill; winter visitant; rare.

133. *Agelaius phoeniceus*, Cab.—Lesser red poll. This species rarely visits, but when it does is found in large flocks. The writer and a friend, during the winter of '73 and '74, obtained about 150 specimens. For fifteen years prior to this time they had not been seen, at least in any numbers, in this section of the county. Depart in April.

134. *Spizella monticola*, Baird—Tree sparrow; abundant winter resident.

135. *S. pusilla*, Bonap.—Field sparrow; common; arrives March 28th to April 10th.

136. *S. socialis*, Bonap.—Chipping sparrow; abundant; arrives April 9th to 25th.

137. *Melospiza melodia*, Baird—Song sparrow; common resident.

138. *M. lincolni*, Baird—Lincoln's sparrow; "migratory; extremely rare."

139. *M. palustris*, Baird—Swamp sparrow; common migrant; not gregarious or resident; arrives April 25th to 30th.

140. *Passerella iliaca*, Swainson—Fox-colored sparrow; arrives March 25th to April 5th; abundant during migration.

141. *Euponia americana*, Hutton.—Black-throated bunting; rare; arrives April 27th to May 1th. I have never known it to breed. Michener gives it as a "summer resident; common."

142. *M. E. townsendi*, Bonap.—Townsend's bunting; but one specimen known.

(To be continued.)

Fish Culture.

FISH CULTURE IN CALIFORNIA.

THE fifth biennial report of the Commissioners of Fisheries for the years 1878 and 1879 shows an encouraging progress of the work in California, and an increased public interest in the labors of the Commission. The fishing industries of California are of great magnitude; the wealth of the State is not all locked up in her gold mines. The pages of the report now before us contain some instructive statistics of her other sources of revenue; and we have made liberal extracts from this instructive document:—

Since the inception of fish culture in the State one-half of the annual appropriation has been devoted to the propagation of the salmon (*Oncorhynchus quinnat*); the number of young fish hatched and turned out into the Sacramento River during that period being 13,150,000. The yearly supply is now 2,500,000, which appears to keep the yield of the river equal to that of former years, notwithstanding the increase in the number of se-d-jons protected by law, the increase in the nets and fishmen, and the erection of additional canning establishments.

The following table will show the relative catch for the years during which we have caused statistics to be obtained of salmon caught in the Sacramento and San Joaquin and transported to San Francisco, Sacramento and Stockton:—

Open season Nov. 1st, 1874, to Aug. 1st, 1875	5,628,744 lbs.
Open season Nov. 1st, 1875, to Aug. 1st, 1876	6,121,322 lbs.
Open season Nov. 1st, 1876, to Aug. 1st, 1877	6,462,162 lbs.
Open season Sept. 15th, 1877, to Aug. 1st, 1878	6,529,768 lbs.
Open season Sept. 15th, 1878, to Aug. 1st, 1879	4,432,250 lbs.

The apparent falling off in the season of 1878-9 was not because the fish were not so numerous in the river as in former years, but in consequence of a dispute between the proprietors of the canning establishments and the fishermen as to the price to be paid by the former for the fish as they were caught.

The close season, say the Commissioners, is now too short. Salmon in large numbers, with eggs fully mature, were on sale in the San Francisco and other markets from September 15th to the 1st of October, and yet we learn efforts will be made at the coming session of the Legislature to still further reduce it, or to change it to a time when there are no fish coming in from the ocean, or perhaps to completely abolish it. Experience in all the other States has demonstrated that fishermen as a class look only to their present profit, and are not willing to yield anything that the supply of fish in the river may be maintained.

The statistics of the canning establishments in California are as follows: Total value of fixtures, including rig, canneries, 220 boats, 220 nets, and 120 scow houses, \$874,500. Six hundred men are employed in fishing and 800 more in canning, with a large number of Chinese workmen.

NAMES WANTED.—We should be pleased to have the writers who use the following signatures send us their proper names: "W. B." Sept. 11th, 1879; "Issaquima," Sept. 18th, 1879; "G. G. H. Jr.," Aug. 23, 1877; "R. P. C.," Jan. 29th, 1874; "J. F.," Sept. 14th, 1878; "R. S. B.," April 9th, 1874; "C. S. W.," Dec. 10th, 1876.

The total number of salmon canned in 1878 were about 220,000, value \$263,487; in 1879, 67,323, value \$50,576. In Oregon the salmon fisheries employ 800 boats and 800 nets to 35 canneries, with a working force of about 2,000 men, of whom two-thirds are Chinese, the total capital invested being \$1,375,000. In Oregon, British Columbia, and Alaska, the 47 canneries put up in 1878 a total of 604,570 cases, of which the value was \$9,294,578, and in the year 1879 a total of 408,800 cases, valued at \$3,013,600.

The catch of the season of 1877-8, says the report, was the largest of any since we commenced obtaining statistics, and is in fact the practical result of artificial hatching. Fish hatched in a given year do not begin to show in the returns until three or four years after the young fish are placed in the water. After nine years of study and experience, combined with considerable practical experience, we are prepared to answer the question as to the practicability of keeping up the supply of salmon in the Sacramento, notwithstanding the increase of population, extended facilities for transportation, and the multiplication of canning establishments, nets, and fishermen.

First—There must be an honest close season, faithfully observed by the fishermen, to allow a portion of the ripe fish to reach the spawning grounds. This must be kept as a normal supply of the river, which normal supply would depend upon the area of clean gravel beds at the sources of the streams over which pure water was passing of a proper temperature. It would also give a supply of fish at the only places where their eggs could be taken for artificial hatching.

Second—The thousands of sea lions and seals at the Golden Gate and in the bay—strictly protected by legislation and management—must not doubt catch more fish annually than all the pets of the fishermen. These rapacious animals observe neither close season nor Sunday, live wholly on fish, and are unceasing in their work of destruction. They should be reduced in numbers or driven to some other part of the coast.

Third—A portion of the fish being allowed to reach their spawning grounds, and their destruction by sea lions and seals at Golden Gate and in the bay—strictly protected by legislation in this river would depend simply on the amount of money which the Legislature should deem proper to appropriate for the purpose.

After the female salmon escapes all her enemies in the ocean, the sea lions at the Golden Gate, the seals in the bay, and miles of nets in the river, and swims blindly against a stream of more than one hundred miles of salmon, the female salmon, the female salmon, the female salmon reaches the clean gravel beds of the ice-cold sources of the river to perform the duties of maternity, she is still beset by numerous enemies. In the most favorable streams the areas are not large—having proper beds of gravel, appropriate depth, and the right temperature of water—on which the eggs can be deposited. When the eggs are deposited, observation and experiment have shown that only an average of eight per cent. of them come in contact with the fertilizing sperm of the male, ninety-two per cent., of course, die. This eight per cent. is liable to be destroyed by trout and other fish, or to be smothered by a deposit of sediment caused by heavy rains on the summit of the mountains.

A mature female salmon of the Sacramento will yield 800 eggs to each pound in weight of the fish; thus, a fish of 20 pounds will yield 16,000 eggs. Sediment, and all that come in contact with the fertilizing sperm of the male, ninety-two per cent., of course, die. This eight per cent. is liable to be destroyed by trout and other fish, or to be smothered by a deposit of sediment caused by heavy rains on the summit of the mountains. A mature female salmon of the Sacramento will yield 800 eggs to each pound in weight of the fish; thus, a fish of 20 pounds will yield 16,000 eggs. Sediment, and all that come in contact with the fertilizing sperm of the male, ninety-two per cent., of course, die. This eight per cent. is liable to be destroyed by trout and other fish, or to be smothered by a deposit of sediment caused by heavy rains on the summit of the mountains. A mature female salmon of the Sacramento will yield 800 eggs to each pound in weight of the fish; thus, a fish of 20 pounds will yield 16,000 eggs. Sediment, and all that come in contact with the fertilizing sperm of the male, ninety-two per cent., of course, die. This eight per cent. is liable to be destroyed by trout and other fish, or to be smothered by a deposit of sediment caused by heavy rains on the summit of the mountains.

Among the other fishes to which attention has been given, are the white fish (*Corygonus albus*), of which Professor Baird gave nearly one million eggs from Lake Michigan. A discovery of some importance in the care of the young of the white fish was made by Mr. J. G. Woodbury, in charge of the State hatching-house. This fish lives on the crustacea found on the rocks at the bottom of deep lakes, and as it was not known on what the young fish could be fed, it has heretofore been necessary, within a few days after the young fish have emerged from the eggs, to place them in the lakes to find their own food. Mr. Woodbury found that by pounding to a jelly the flesh of the common salt-water crab, the young white fish would eat and thrive upon it. He kept 50,000 on this food for more than two months. This discovery is of much interest, as it enables the young fish to be kept for some time, and thus distributed to stock mountain lakes that are inaccessible during the winter.

Professor Baird also sent, in 1878, 115,000 young shad from Havre de Grace, Maryland, and these were placed in the Sacramento River at Tehama, where the previous importations, 285,000 in all, had been placed. There can be no doubt they find congenial homes in Pacific coast waters, and are thriving and producing their kind. Several thousand mature fish have been taken and sold in the San Francisco markets during the spring of 1879. A few are found in market almost every month of the year. After leaving the Sacramento River the great body of these fish follow the coast south to the Bay of Monterey, where they must remain, finding an abundance of food; for a few are caught in the nets of the fishermen in this bay during every week throughout the year.

The 74 Schuykill catfish (*Ameiurus albidus*), imported from the River Schuykill in 1874, and placed in lakes near Sacramento, have increased to millions, and now furnish an immense supply of food. They appear to be equally at home in the rivers, lakes, brackish sloughs of the tide

lands, artificial reservoirs and mill-ponds.

The value of all the fish of this species, now caught annually and consumed as food, would more than equal the annual appropriation made by the State and placed at the disposal of the Fish Commissioners. This variety of catfish has valuable characteristics, which admirably fit it for wide distribution and for self-preservation in the struggle for existence. The female makes a round nest in the bottom of a pond in which she deposits usually from 3,000 to 5,000 eggs. These are fecundated by the male, who then leaves them to the care of the female. The mother remains over them fanning them with her fins, probably to keep them oxygenated with fresh currents of water, as well as to prevent them being smothered by sediment. She remains in constant attendance, driving away every fish that approaches her nest. In from six to ten days the young hatch, and their appearance. Her care does not cease with the birth of the young fish. She now swims about them in a circle, keeping them together until all are hatched. When all the young fish are fitted to swim she leads them off to find food, still keeping them in a body by circling about them and driving back wanderers, as a trained shepherd dog drives in a wandering sheep; she will at the same time fight any other fish that comes near her charge. In another week or ten days they are prepared to search for their own food, when they gradually disperse. The popular demand for these fish increase as the people learn its adaptability. During the time covered by the report some 39,000 of them have been distributed to public waters.

In January, 1878, we received from the hatching-house, Grand Lake Stream, Maine, 50,000 eggs of the land-locked salmon. As was stated in our last report, the California salmon (*Oncorhynchus tshawytscha*) has been placed there itself to a life in fresh water. The reservoir of the Spring Valley Water Company, supplying San Francisco with water, and known as San Andreas and Pilarcitos, are well stocked with salmon, the product of those prevented from returning to the ocean by the constructions of the dams. Lake Chabot, the reservoir from which the City of Oakland is supplied with water, is also well stocked by the same means, and from young salmon placed there.

In the winter of 1875-6 a large number of young salmon were placed in the Truckee River. This river has its rise in Lake Tahoe and flows into Pyramid Lake in Nevada, and has no outlet to the ocean. Some of these salmon are reported to have been taken with the hook in the Truckee River this season, weighing from three and a half to five pounds. The size to which the Sacramento salmon will grow, and the amount of food they depend upon the quantity of food to be found in the lake or stream. A few years after the dam was erected at the San Andreas reservoir salmon were taken in it weighing from six to twelve pounds. In ten years they have multiplied until hardly any other fish are taken, but now do not average to exceed three-fourths of a pound. They now mature their eggs and molt when less than a pound in weight. The land-locked salmon of Maine do not average over six pounds in weight, but they are numerous in the lakes, furnish a large amount of food and yield much sport to the angler, as they readily take both fly and bait. As they are natives of the cold lakes in Maine we have thought the most appropriate places for the distribution of the young fish would be in our mountain lakes; but for purposes of testing their fitness to thrive in warmer waters, a portion were also distributed to lakes in the valley and on the coast.

The Eastern trout does not appear to thrive in the streams of the Coast Range of mountains. These mountains are composed of sand stone, which is readily worn by the winter rains, and at certain seasons all the streams from them carry a large amount of sediment and become more or less discolored. There is also a great difference in the temperature of the water in winter and summer. The native home of the Eastern trout, as its name implies, is in the clear cold sources of mountain streams. Wherever planted in the clear cold streams of the Sierra Nevada, in water flowing over granite and slate, they find congenial homes, and thrive and propagate equally with the native trout.

Probable there is no trout more valuable for wide distribution than the Pacific coast brook trout (*Salvelinus*). It grows rapidly, occasionally attaining a weight of 10 pounds; it can feed in salt water at the mouths of coast streams, and often weighing five pounds when confined entirely to fresh water containing an abundance of food, as in the McCloud River. Some specimens of McCloud trout, kept in the hatching-trough in the fishery at San Leandro, grew to average seven inches in length in one year from the time the eggs were placed in the hatching trays. It does not seem to be injuriously affected by a long continuance in water containing a large amount of muddy sediment. We are not aware of experiments having been made to test, with exactness, the highest temperature of water in which it will exist and thrive, but without doubt it will live in water so warm as to be fatal to Eastern trout. We believe it could be successfully introduced into streams on the Atlantic coast where Eastern trout would not thrive.

This foregoing resume of the report of Messrs. Redding, Throckmorton and Farwell, the competent commissioners, are sufficient to show that California is fully alive to the importance of the preservation of the fishery supply. The work is in capable hands, and is progressing in a most satisfactory manner.

THE AGE TO LIBERATE FISH.—*Manchester, N. H., Jan. 26th.*—Our experience goes to show that the best time to plant out the young fry is as soon as possible after the yolk-sac is fully absorbed. The young fish are then very lively and are moving about in all directions in search of food, and have not got accustomed to being artificially provided for. The young California salmon put into the Penikese at that stage of their existence, in December, 1878, in water almost freezing, seemed to stand the transplantation very well and were plenty and healthy in the river up to August, 1879, since which time none have been seen, which makes it probable that they returned to salt water the first year instead of remaining in the river two years, as is the case with the Atlantic salmon. We have at different times taken some of the young parr and smelts of the Atlantic salmon which have been in the water almost two years, and stand the transplantation very well and were plenty and healthy in the river up to August, 1879, since which time none have been seen, which makes it probable that they returned to salt water the first year instead of remaining in the river two years, as is the case with the Atlantic salmon. We have at different times taken some of the young parr and smelts of the Atlantic salmon which have been in the water almost two years, and stand the transplantation very well and were plenty and healthy in the river up to August, 1879, since which time none have been seen, which makes it probable that they returned to salt water the first year instead of remaining in the river two years, as is the case with the Atlantic salmon.

tions this season, having taken over 100,000 salmon eggs at Plymouth, from fish which were originally planted in the Penikese, and had returned to spawn, and have also taken over 150,000 trout eggs, half of which are the property of Massachusetts, and the other half will be distributed in various parts of New Hampshire, where the people will protect them till they have grown to a reasonable size. We have also received from Maine 45,000 Penobscot salmon eggs and 50,000 land-locked salmon eggs, with more of the latter to come. The land-locked eggs will be distributed about the State, and the salmon proper placed in the Penikese.

SAMUEL WEBBER.

As a difference of opinion obtains respecting the age at which to liberate fry, we ask our readers to supplement the experience of the New Hampshire Commissioner with their own.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*. Grouper, *Epinichthys nigricans*.
Drum (two species). Flumly Trout (black bass), *Centropomus*.
Striped Bass, or Rockfish, *Roccus tinectus*.
Sea Bass, *Sciaenops ocellatus*.
Sheepshead, *Archamia probatocephalus*.
Black Bass, *Micropterus salmoides*.
Red Snapper, *Lutjanus blackfordii*.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address; after the following model:—

MAINE—Tim Pond, Eustis, Franklin County.—Forty-eight miles north of Farmington. Maine Central Railroad to Farmington; stage to Kingfield and private conveyance twenty-five miles to the farm-house of Kennedy Smith; or, better, private conveyance from Farmington to Smith's. At Tim Pond are four good camps and five boats. Board and use of boat, \$1 per day. Five miles to walk from farm to pond; train ready to haul baggage to camp at reasonable rates. Fish—Trout from May 1st to Oct. 1st are very plenty. Game—Partridges Sept. 1st to Dec. 1st. Address Kennedy Smith, Eustis, Maine.

ARKANSAS—Newport, Jackson County.—Station on St. L., M. & S. Railway, and boat landing on White River. Game—Snipe, plover, quail, ducks, geese, turkeys, swan, deer, bear; twenty-five miles to Swan Lake. Fishing—in river, lakes, and village creek; bass, pickerel, jack salmon, perch—all sorts—in fact all Southern species to be found in the White River. Fish—Trout from May 1st to Oct. 1st are very plenty. Game—Partridges Sept. 1st to Dec. 1st. Address W. H. Bogart, as above.

WHEN TO STRIKE IN FLY-FISHING.

MUCH of the *finesse* of sportsmanship cannot be taught the novice by written instruction. There are certain indispensable points in the successful practice of the art of fly-fishing which must come to the expert only after long experience and discipline. We may talk of "the twist of the wrist," but to make that twist so neatly and effectively that each repetition of it means a fish hooked is something which must be learned quite independently of the books. There, for instance, is the subject of striking in fly-fishing for trout or grayling. Veteran anglers who have fished in many of the best trout streams of the land and who have deftly struck the grayling in Michigan and the salmon in the Canadian streams, hold and maintain very different theories on this point. One will tell you that he strikes as soon as he sees the fish move and before he feels the touch. Another claims that the only proper method is to wait until you feel the touch of the fish, and then, by a movement as quick as lightning, fasten him. Our own practice is to strike at sight; we admit that thereby fish may be missed and scared away, which perhaps would be captured if given a little more time; but the number so lost are, we believe, less than the scores of misses made by the contrary practice. As a rule, the fly-fisherman cannot strike too quick. We should be happy to have the experience of some of our readers upon this topic. There will be many weeks to intervene yet before we may actually put theory into practice; and meanwhile it is fitting to compare notes, and by discussion enlighten both ourselves and the novices who are just learning the rudimentary lessons in the school of angling.

THE SALMON SICKNESS.—*Fort Omaha, Neb., Jan. 1880.*—Your Oregon correspondent writing on the above subject has left little more to be said. I can vouch for the accuracy of his observations and add a striking incident which came under my observation, which would seem to prove that man is also liable to sickness from the same cause.

I was camping on the head of Bear River, Shoshwater Basin, Washington Terr., with two companions in the month of November. I had heard of the "salmon sickness," as it is called, but did not pay much attention to it. The stream was full of hook-nosed or dog-salmon, an inferior species which is seldom eaten when fresh, unless during the first run. After remaining in the small tide-water streams several months they become bruised and scarred in the battle of life; and although I did not think of it at the time, I have no doubt that a microscopic examination would have disclosed the fish fungus which has been so lately discussed in the FOREST AND STREAM, and which may prove to be the real cause of

thoroughly changing of colors, both of animals and birds, we can refer to no better authority than Mr. Darwin, who, in his work of "Animals under Domestication," treats this subject with his usual mastery skill and careful research.

PRECEDENCE AFTER SPAYING.—*New York, Jan. 16th.*—In **FOREST AND STREAM** of last week I corroborated the case of one of your correspondents who spayed a bitch, which afterward gave birth to pups; and you suggested that the case might have descended previous to the operation. This was impossible in my case, as the bitch was only five months old at the time she was spayed. I have since presented the case to Professors T. G. Thomas, J. C. Dalton and J. G. Curtis, and they have all decided that there must have been at least one supplementary ovary. Professor Dalton has notes of two similar cases; one a out and the other a bitch; this latter having already given birth to two litters of pups, and more expected.

MARK WEST.
The supplementary ovary is of course quite possible, but should be demonstrated before accepted as fact. The authorities quoted are of course good only so far as a good opinion is good. The *experimentum crucis* is the only reliable evidence.

MR. WM. B. SHATTUCK'S KENNEL.—This excellent and admirably managed kennel is in the vicinity of Madisonville, Ohio, fifteen miles to the eastward of Cincinnati. The kennel was designed by the owner, Mr. Shattuck, and is modeled in its way on account of its practicability. There are eight rooms in all, each 6x6 feet; these are raised a sufficient distance from the ground to prevent all dampness from penetrating through the flooring; they are kept moderately warm, yet perfectly cleanly and well aired. Each room is provided with its own separate yard, 6x10 feet, and what is well worthy of imitation everywhere is, that the kennel yards are covered with gravel and not material of limestone. This rough surface effectually prevents the softening of the feet which dogs are liable to during the cold season. All of these yards open into a large, well turfed exercising ground enclosed with a paling ten feet high. Of the principal inmates of this kennel, Thorstone is perhaps the best known; a magnificent red Irish setter, who is as good as he looks, and shows that he has been handled by a master in the art of dog breaking. Caesar, a ditz colored pointer, a rare one for ruffed grouse, and two couple and a half of splendidly bred little beagles, of which Lee and Lill were prize winners at St. Louis. All of the stock is in the finest condition, which proves that Mr. Shattuck has adopted an admirable system which he sees is carefully carried out. The dogs are fed twice a day on a stiff, well-cooked mush of Indian meal with the addition of 10 or 15 per cent. of meat—which addition gives the mush a gelatinous consistency; different garden vegetables are mixed at times with the mush. When the dogs are worked in the field the proportion of meat is increased to 50 per cent.; and complete control seems to be attained over the condition and health of the dogs by varying the proportions and kinds of vegetables cooked with the mush.

IMPORTED BULL-DOG PUPPY.—Mr. John P. Barnard Jr., Boston, Mass., has imported a full brother to his bull-bitch Judy. The dog is all white, and a fine one.

BULL DOGS STOLEN.—The wood-shed of Mr. Edward McVey, at Tompkinsville, Staten Island, was entered on the night of Jan. 31st, and a very fine litter of bull-dogs stolen, which were of considerable value to their owners. A liberal reward is offered for the return of the puppies.

—The Westminster Kennel Club will hold their annual bench show in New York about the end of April; as yet the dates have not been decided upon. We will furnish full particulars when they are to be announced officially.

NAMES CLAIMED.—*Johnnie*—Mr. James H. Goodsell, of New York City, claims the name of Johnnie for his white and black-faced English setter dog, by Royal Ben (Carlowitz-Lucy), out of Lady Beaconsfield (Leicester-Orphina); whelped Jan. 10th, 1879; bred by Mr. Edward H. Gillman, Detroit, Mich.

Madcap and Flirt—Mr. Geo. D. Macdonnell, of Montreal, Canada, claims the name of Madcap for his pure black cocker bitch, nine months old, by Mr. E. F. Beardslee's (Gouverneur, N. Y.) Dan-Bess; also the name of Flirt for his liver-colored bitch, nine-months old, Rolls-Brownie.

Sabro—Mr. Fisher Howe, Jr., of New York City, claims the name of Sabro for black and white ticked, with black points, pointer puppy, by owner's Rex, out of the late champion bitch Fan (Gillespie's); whelped July 15th, 1879.

Nem—Mr. Fisher Howe, Jr., of New York City, claims the name of Nem for black and white ticked, with black points, by Strong's Pete, out of Mr. Barker's Princess; whelped Dec. 6th, 1879.

BRED.—*Floss-Rattler*—Mr. Reuben Reinsmith's (Allentown, Pa.) bitch Floss (Bismarck-Fanny) to Mr. L. F. Whitman's Llewellyn setter dog Rattler, of Forest and Stream Kennel, Detroit, Mich.

Lilly-Sensation—Dr. F. H. Rehwinkel's (Chillicothe, Ohio) beagle bitch beauty, to Mr. J. H. Storell's (Philadelphia, Pa.) imported dog Chanter, Jan. 26th.

Lilly-Sensation—Baltimore Kennel Club's Lilly (Guido's) to champion Sensation. Lilly is the dam of Mr. Orgill's Rush, Rose, Belle, etc., by Fluke; also of Setton and the St. Louis Kennel Club's Clytie.

Flounce II—Baltimore Kennel Club's Flounce II, to same Club's Flounce. Flounce has never been seen on the bench, and Mr. Kelly, the club's breaker, proclaims her a ratter in the field. Derg won first at New York, 1879; Philadelphia, 1879, and Boston, 1879, winning every time exhibited.

IMPORTED MASTIFF TERRIER.—Mr. Chas. E. Wallack, of this city, has just received from the kennel of Mr. Rich and Alston, Leigh Lodge, Sale, England, a magnificent mastiff puppy bitch seven months old, by Champion (Belmont) out of Luffa. This is probably the most celebrated and well known show dog in Europe; he died during the early autumn of last year.

—We were recently favored with a call from Mr. B. W. Kilburn, of Littleton, N. H., who has traveled very extensively, with his camera, over America and many foreign countries. He has been in every portion of America, Bermuda, Mexico, France, Switzerland, Germany, Italy, Palestine and Egypt, in order to obtain stereoscopic views from nature. These pictures in artistic merit cannot be surpassed, and the subjects are of rare interest. Being also a veteran sportsman, his views of "The Hunter's Return," "The Monarch of the Pool," "Caught at Last," and "Walton's Dream, or the Fisherman's Vision," add greatly to the collection.

Answers to Correspondents.

Correspondents who may send us their proper name and address will always receive prompt attention in these columns. We require a man's name for two reasons: (1) sometimes as a guarantee of good faith, and (2) always as a matter of common courtesy. As a rule we do not reply to inquiries by mail, except in cases demanding immediate advice.

W. W. P., Kentland, Ind.—Address of paper is New York City.

J. R. Jr., Washington, Pa.—See answer to your question in last number.

J. T. Alton, Pa.—For live quail address Mr. E. H. Malloy, High Point, N. C.

L. G. C., Philadelphia, Pa.—For ferrets send to Chas. Reiche & Bro., Chatham street, New York.

T. C. H., Elizabethtown, Pa.—You may send your terrapins to Eugene G. Blackford, Fulton Market, New York.

G. L. B., Princess Anne, Md.—We have no scores of the walking matches, nor do we know where you could find them.

ASAPINK, Trenton, N. J.—The name is that of a Philadelphia maker whose work had a good reputation. He is dead now, we believe.

IGORAMUS, Topham, Mass.—To remove the caps from your U. M. C. Co.'s shells, get a cap extractor; an implement made for just this purpose.

W. S. W., Haverhill, Mass.—Eugene Bogardus shoots glass balls with rifle at 15 ft. They are thrown up straight from a trap made specially for the purpose.

H. W., Indiana.—See article headed "The Handling of Gun-Sly Dogs" in the Kennel Column of this week's paper. It covers the ground, and is eminently practicable.

W. W. L., Eau Claire, Wis.—1. Dr. Carver is in England. 2. Address the paper at New York. 3. Send your game to Knapp & Van Nostrand, Washington Market, New York.

M. M., Reading, Mich.—The metal ball which rings when struck by shots no longer manufactured; was not a success. You may possibly and one by writing to dealers in sportsmen's goods.

L. G., New York.—Quail should be put out in March or April, if your preserve is in the same climate as New York. It depends somewhat upon the season. They will brood the same year.

B. Pa.—What is meant by the word "blinking," used in connection with a dog? Ans. A "blinker" is a dog that backs off his point and comes "to heel," or ranges away to find other birds.

C. G. S., Emerson, Manitoba.—1. The two kinds of shot are both good, the choice between them a matter of individual fancy. 2. We should advise you to stick to the old powder for best satisfaction.

READER, New York City.—We would advise you to feed your dog, although your puppies may have worms. Give it some area nut, which you can obtain with directions for use from Conroy, Bisset & Malleson, 65 Fulton street, city.

J. H. A., Marion, Ind.—For English hares we advise you to write to Dr. Chas. Schmidt, East Brunswick, N. J. He is about to import some. We do not know where to refer you for greyhounds. Possibly some of our readers may tell us.

W. A. B., Montpelier, Vt.—L. O. Chess Column was given up because we could not make room for it. Our field is broad enough without it. 2. We have seen athletes turn triple somersaults, and over the backs of eleven elephants at that.

SUNSHINE, Chicago, Ill.—You may use buckshot in a choke-bore with safety, provided you chamber the shot at the choke just within the muzzle. See also the methods of loading buckshot described by correspondents in recent issues.

J. H. M., Mamaronock, N. Y.—For quail shooting near New York go down to Ocean County, New Jersey. You will find plenty of sport at the Imperial Lodge, six miles from Tom's River, which is registered in our Directory. Write to N. C. Glover, proprietor.

F. T. B., Brownsville, Pa.—1. You may subscribe for the paper through the International News Company, Beekman street, New York. 2. Send to any of our advertisers of fishing tackle for the hooks. You can make them yourself with a file, if you exercise a little ingenuity.

G. H. C.—Use No. 8 canvas for your canoe. Need not allow for shrinkage, as the canvas will be oiled or painted before putting afloat. No need to that case of water proofing. Try following:—Flour of sulphur, one pound; lard oil, one gallon; boil until thoroughly combined.

S. N. S., Elizabeth, N. J.—1. For Spratt's dog biscuit send to any gun store. 2. The pair of gun barrels will cost about half the price of the gun. A pair of 12-gauge fitted to a 10-gauge gun will make the gun lighter. The cost would be more than it is worth; you might better buy another gun.

H. C. B., Wausau, Wis.—We do not advise you to lay poison for foxes, unless you are very sure that no dog will find the bait intended for Heynard. For trapping use the spring steel trap, or a dead-fall, bait with meat and cheese, and take special pains to leave no human scent. You should handle the trap with gloves.

S. S. C., Trenton, Tenn.—I have a gun which has been changed from a pin fire to a central fire. I want to change so that it will do the shell. Please give me the address of a firm that can do the work for me. Ans. Send your gun to W. R. Schaefer, Boston, Mass., or to Clark & Snodder, Baltimore, Md. Both firms are thorough, by reliable, and will do your work well.

W. W., West Newton, Mass.—1. The gun made in Paris was fair—not of superior material. We should not change it from pin fire to central fire, but should prefer to buy another gun. 2. The

"Chicheston repeating rifle" is nothing but a .22 calibre pistol or dart barrel with a long stock. The arm is simply good for nothing except to be used as a toy. Keep clear of it.

SKIP JACK.—Nail on immediately after steaming. Nelson's boat building; can send it to you upon receipt of price, \$125. Plank on sides of skip-jack to be worked as wide as possible, and on the floor as wide as the "sny" or twist edgeways will allow. The narrower the plank the easier to work, but more labor. About eight-inch wide naidships and taper as necessary.

W. C., Muskegon, Mich.—Vornas in a dog will cause a harsh, staring coat, also denoted by the animal's frequently licking the part and dragging himself along in a sitting posture, hence the wearing off of hair about the hindquarters. We would suggest that you give your dog urota nut, two one-half drachm doses, evening and morning, after dog has fasted; followed four hours after by castor oil.

T. H. D., Troy, N. Y.—The extreme accurate range of .32 calibre Ballist rifle with the ordinary factory ammunition is considered to be about one hundred yards. The charge of powder is so small in the .32 calibre, and the bullet so light, that its accuracy at the longer ranges is very much impaired by the wind and other causes, as compared with the .45 calibre, 70 grains powder, 490 grains bullet, which is the Government cartridge.

WOONCOCK, Duxbury, Mass.—Wild rice will grow in Massachusetts if properly planted. It may be put in either in the fall or in the spring. In natural growing the rice ripens and drops down in the fall. The winds and waves then pull up the old stalks, which float away. The seed should be put into five or six feet of water. A soft, muddy bottom is indispensable. Next fall you may get seed of Mr. Chas. Gilchrist, Port Hope, Ont.

POSS SURROG.—1. We have made inquiries about the company, and so far as we can learn, they are now unable to supply orders. Their mistake was in advertising before they were prepared. Have met with several subsequent disappointments in securing manufactures, etc. 2. The metal ball for trap-shooting is no longer manufactured. We believe Squires, of this city, has some on hand. He can also supply you with a pair of snow-shoes; price, \$6.

W. P. B., Lynn.—We should judge you need a sneak-bow. Write to Richard B. Lane, Bayville, Ocean County, N. J., Cost \$35. If you want anything cheaper, build a light punt 10 ft. long, 3 ft. 6 in. beam, and about 12 in. deep anywhere, with lumber or curved shingles to ends, later about 4 in. deep, the bottom rising. Deck over with stout sheeting, varnish thickly and have cockpit with apron in centre. Use white pins; or tin, thick. Row or paddle. Plover in your neighborhood about May 20th. Use No. 8 shot if wild, No. 9 if gentle.

F. B. C., Carleton, N. H.—A. and C agree to shoot a match of five glass balls each for a wager, terms to be first miss and out; that is, of course, the first one missing his ball to be out of the contest. A shoots and misses; B breaks his ball, and C does likewise. The next two shots are counts also, but on the third round B misses, when C claims the money, according to terms agreed upon. But B objects, saying that C is not entitled to it unless he shoot and breaks his ball, as they must have an equal number of shots. Which is right? Ans. It is right.

JACK, Greenfield, Mass.—1. Your dog is evidently troubled with cack; wash out his ears with syringe, using castile soap and tepid water, and pour in the ears two or three times a day a small quantity of the following solution: Sugar of lead, one scruple, mixed with one ounce of water. To prevent the animal from flapping his ears a cap should be placed over the animal's head and tied underneath the throat. Give an aperient, say half an ounce of Epsom salts, in water, once a week, and mix vegetables with dog's diet. 2. We will endeavor to look up the pedigree you wish.

COMPOUND, New York.—Fair performance is 2 lbs. coal per H. p. per hour. Above that is poor under it is excellent. Experience and theory show that the highest boiler pressures are the most economical. It is to high pressure in boiler mainly that the compound engine owes its supposed superiority. Long stroke single cylinder engines have been built to work nearly as economically with equal boiler pressure. The one object of compounding is to prevent condensation due to excessive expansion and lowering of temperature of the steam in long stroke engines. The Perkins boiler carries four hundred or five hundred pounds steam with perfect safety. It is composed of a series of pipes—an improvement on the Horizontal coil.

HOWELL, Lowell, Mich.—Would a participant for the Bogardus Glass Ball Medal be regarded as a professional? If so, would he be regarded as a professional at any other than glass ball shooting? Ans. No. "There are only a few professional shooters in the country, and they are recognized as men who make a livelihood with the gun. In some branches of sport a man who contends for a money prize or with a professional is thereby adjudged to become a professional. But this is obviously not the case with glass ball and pigeon shooting. We believe in, so far as practicable, abolishing money prizes in trap shooting competitions. The substitution of other prizes instead elevates the sport and takes from it its mercenary features.

B., Concord, Mass.—1. If a full-blooded Irish setter bitch is lined by a bulldog and has pups, will she not be liable at any future time, when lined by an Irish setter, to have one or more puppies resembling in some way the bulldog? 2. If they did not resemble the bulldog in any way could they be called strictly pure blooded Irish setter puppies? 3. Can you give me the names of several good books on the subject of breeding? 4. Over how small a pond does the State of Massachusetts have control? Ans. 1. See answer to "X. V. Z." in last week's issue. 2. No. 3. "Stonehenge on the Dog" contains a chapter on the principles of breeding dogs. Darwin's "Animals under Domestication" is also well worth reading by those who wish to try experimental breeding. 4. We have referred this to the Massachusetts Commissioners.

CHARLES HATLOCK, having closed his connection with the Forest and Stream Publishing Company, may now be found at his office at 61 Broadway, room 23, where all personal letters and communications should be addressed.

FOR SALE.—Two thousand high grade sheep; young, good condition, two thirds ewe. A. W. Gilbert, Colorado Springs, Colorado.

BUY NONE BUT THE BEST.—The "Red Rubber Recoil Pad" sent, postpaid, on receipt of \$2. Recommended by the FOREST AND STREAM. J. B. Fitzmaurice, Importer of fine guns, 90 Broadway, New York City. Send stamp for list of second-hand guns and rifles.—Adv.

Correspondents will please address all letters to the Forest and Stream Publishing Company.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUR POOR MIGRATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2382.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 5, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

•We cannot be responsible for dereliction of mail service if money remitted to us is lost.

•Trade supplied by American News Company.

DR. T. M. BREWER.—Our readers will learn with unfeigned sorrow of the death of this well known naturalist at his home in Boston, on the 23d inst. Thomas Mayo Brewer was born in Boston, Nov. 21st, 1814, of a family which had already become noted through the distinguished deeds of his grandfather, Col. James Brewer, who was a prominent revolutionary patriot, and took an active part in the "Boston tea party" of 1778. Graduated at Harvard College in 1835, and in the Medical School in 1838, Dr. Brewer began the practice of a young physician, devoting his leisure to the two seemingly discordant subjects of general politics and ornithology. Having displayed marked ability as a writer, he was induced to enter the newspaper profession, and for many years was known as an influential leader of opinion; and he was subsequently equally active and prominent in the cause of education. To those who may read this brief notice, however, Dr. Brewer is best known as an ornithologist. He was one of the young naturalists who were the companions of Audubon, with whom his relations were of the most pleasant nature. The great naturalist honored his Boston friend by naming some new species of birds after him. Shortly before Dr. Brewer's death he had prepared a pleasant paper for one of the monthly magazines, containing copies of several letters which he had received from Audubon. Few of the men who knew Audubon are left.

Dr. Brewer's standing as an ornithologist was very high, and while abroad he everywhere met with a most gratifying reception among the savants of Europe. As a writer upon scientific subjects he has contributed works of much value to American natural history. In 1880 he edited a new edition of Wilson's Ornithology, preparing for it a synopsis of all the North American birds then known. He was the first authority in the country on bird's eggs; the work entitled *Oology of North America*, written by him in 1856, was a most elaborate publication, undertaken by the Smithsonian Institute, but suspended because of its great cost. He wrote much of the biographical portion of the History of North American Birds, prepared in connection with Messrs. Baird and Ridgway; and frequently contributed to the monthly magazines, to the *Natural Bulletin*, and to the *FOREST AND STREAM*. His pen had the happy gift of popularizing the subjects treated, and putting them in intelligent form before the general reader. The birds were his friends; when he wrote or talked of their ways, old and young unconsciously became interested, too.

A SHOCKING REVELATION.

LITTLE by little we are gaining an insight into the mode of life and habits of thought of the English sparrow, and, painful as it is to be obliged to acknowledge the fact, it must be confessed that, judged by the morals of the present age, this bird does not appear to be all that he should be. His quarreling and fighting with his comrades, his driving off our native birds from the parks and open places of our city, and the incessant clatter and racket which the sparrow keeps up, might easily enough have been excused or passed over; for the first two eccentricities we could have attributed to a mere effervescence of animal spirits and love for excitement, and the last may be only the sparrow's way of doing what the ornithologists of a past generation used to call "hymning his Creator's praise." Yes, these are trifles; but what well-regulated American mind can refrain from shuddering at the information which we print in another column from Dr. Coues, the well-known friend of the birds, that the sparrow is polygamous. Shocking, indeed, is this news, and scarcely to be believed had it come from any other source. The name by which it is signed, however, compels our unwilling credence. Anything but this could have been pardoned or overlooked, but this is going a little too far. In no well-regulated community can such a state of affairs be tolerated, and we feel sure that Dr. Coues' announcement will cause the anger of each moralist who reads it to burn hot against the daring bird which has brought to the land of the American Eagle, and practices under the Stars and Stripes, such atrocious customs.

The friends of the sparrow, if any still remain to him, may feebly suggest in mitigation of his crimes that we have native birds whose habits in this respect are no better than those of the *Passer domesticus*. It is indeed true that there are some of our game birds which are very reprehensible in this regard, but they have, at least, sufficient consideration for public feeling to practice their wickedness in secret, withdrawing themselves to the woods and fields, and thus avoiding so far as possible human observation. The sparrow, on the other hand, with insufferable impudence flaunts his immorality before our faces in the most fashionable streets of our crowded cities. Besides, do not most of the readers of *FOREST AND STREAM* devote, during three months of the year, every day that they can possibly spare to the punishment of these native criminals. The sportsman pursues them with dog and gun, and, we regret to say it, the farmer's boy snares them without mercy. Their carcasses during fall and winter are hung up about our streets—a dreadful warning to evil doers.

But the villainy of the sparrow has not yet been wholly revealed. Not satisfied with practicing his devilish arts in this free land, and perchance corrupting the morals of some of our weak-minded native birds, the sparrow is sly. Here he has been in the country some ten or twelve years, and all the time an inhabitant of our cities and exposed to constant observation, yet such is his infernal cunning that up to the present time he had never been detected in his nefarious practices. This is clearly an insult to the intelligence and observation of our ornithologists, and we shall be very much mistaken if they permit it to pass without attempting at least a revenge.

But if the state of things which has just been brought to light affronts and shocks the moral sense of America at large, with what feelings will the news be received in Puritan New England? New England, where offenses of this nature have ever been visited with such terrible penalties; New England, where the man who so far forgot himself as to kiss his wife on Sunday was punished by law; New England of the Scarlet Letter. Shall Plymouth Rock, hallowed by so many sacred associations, be polluted by customs imported from the barbaric Orient? Shades of the mighty dead, forbid it!

The blood of the descendants of the Pilgrim Fathers will indeed boil with righteous indignation when this last offense of the sparrows becomes known. Surely from Maine to Connecticut no apologist will henceforth be found for the sparrow, and we may expect that the just wrath of an outraged public sentiment will now at last expel the wicked bird from the land of the forefathers.

In calling this matter to the attention of our readers we are but fulfilling a plain duty, and we feel that we can safely leave the matter to the public to deal with in its own way. We are sure that the alarm and horror with which Dr. Coues' intelligence has been received by us will be shared by all right-minded people, and that the favor with which the sparrow has hitherto been regarded by a portion of the community must now give place to feelings of condemnation and disgust.

—Col. J. J. Toffey, the Sheriff of Hudson County, N. J., and recently elected President of the New Jersey State Sportsman's Association is well fitted to fill the latter position. The Colonel (no fancy title by the way) is an enthusiastic sportsman, an excellent shot and very popular among the boys; Col. Toffey subscribed for the first number of the *FOREST AND STREAM*.

HOUNDING DEER.

THERE is no good reason to warrant or excuse the continued existence upon our statute books of laws which are ostensibly designed to regulate the killing of deer, but which in reality give to self-styled "sportsman" and market hunter full license to slaughter and exterminate. Possibly the most effective agency in producing such laws is the ignorance of legislators who frame them. All that the law-makers know—or think they know—about deer, is what others, who profess to be informed, tell them; and if this information be of an inadequate or purposely false character, improper legislation is the result.

The question of hounding vs. still hunting is one of periodical and spasmodic recurrence at our State capitals. If the merits of the case were set forth by the advocates of each method, and so thoroughly and fully that dispassionate and disinterested men could draw therefrom their own conclusions, we should thereby have advanced a step toward the proper solution of this vexed subject. We have undertaken to secure such a comprehensive presentation of the question. Without at present taking issue on either side we have requested those interested to present their own case in the shape of replies to the following questions. As our circulars may not have reached some whose knowledge and long experience enable them to give testimony worthy of consideration, we invite them now to respond. The subject is one of sufficient importance to merit careful consideration.

So soon as it may be practicable we shall publish a full summary of the correspondence. Game societies and all others interested in securing sound game legislation will find of most efficient service the *FOREST AND STREAM* material thus collected. The points upon which we have asked our correspondents to give their personal knowledge and opinion are these:—

- 1st. What is the character of the country referred to?
- 2d. What is the prevailing method of hunting deer?
- 3d. Describe, from your own knowledge, hounding deer and its effects. Does it drive deer out of the country?
- 4th. Describe in like manner the practice of still-hunting.
- 5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
- 6th. Would you approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
- 7th. Would you approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
- 8th. What is the open season for deer? Do you approve of it? If not, why? How would you alter it?
- 9th. What are the winter habits of deer, so far as you have personally observed them?
- 10th. Add anything else you may think pertinent to the discussion.

THE VALUE OF NAVAL DESIGN.

IN a recent issue, a correspondent, "Corinthian," to whom we are obliged for more than one interesting and tersely put article from the standpoint of the orthodox believers in beam and "practical" talent, takes exception altogether to the application of naval science to the designing of vessels, and yachts more in particular. As we know similar views to be in vogue among a large fraction of the public, these few lines will possibly serve to cause them to reconsider what is generally a too hasty assumption and a too radical conclusion on their part.

The argument advanced by "Corinthian" is exactly what all others of his way of thinking invariably fall back upon when trying to support their side of the question. But we are not prepared to admit that his argument will stand the application of fact or logic. In the first place we are unwilling to acknowledge that all the yachts turned out by famous builders of "natural intuition" are either fast or a success. On the contrary, most of the popular builders have launched monstrosities and failures about as often as they have been fortunate in hitting blindly upon the right thing. We have no desire to be invidious in these remarks, and must ask "Corinthian" and others to recall the list of yachts built or modeled by the gifted who work by inspiration and not by reason—as our correspondent claims—and they cannot fail to acknowledge the truth of these words. For ourselves, we are not disposed to grant anything in the way of inspiration, but think that even the most popular and successful builders are engaged in solving by experiment and logic the complicated problems of design after their own fashion. Moreover, enjoying a pretty intimate acquaintance with many builders, we may add that in so far as they have reached definite and unassailable conclusions, they will always be found to closely coincide in the results of their reasoning or experimenting with the prescribed laws of modern naval science. On the contrary, on those points where their logic is open to criticism, we find that builders disagree so radically among themselves, that the only inference to be drawn is that their success cannot be assigned to any assumed or supposed knowledge or familiarity with the true laws of naval science, but their fast vessels are to be attributed rather to a faithful and comprehensive eye and a mind well developed for the dissection and retention of "sweet"

looking forms. These they incorporate in their models in practice with more or less success, and in proportion as they surpass others in this capacity of mind and eye, they produce results better than those of individuals less fortunately endowed by nature. This is all there is to their success, and in no way vitiates or modifies either the correctness or the utility of naval design.

To put the value of the latter in a clear and impregnable light is an easy matter. "Corinthian" claims that builders of fast yachts are "born," that study of the problems involved are superfluous. But great artists are also "born." The great masters, the queens of song and the skillful fashioners of clay, are not the product of much despised "book-learning," but the favorites richly endowed by nature; yet "Corinthian" would hardly, on that account, think less of studying the laws of perspective, give up practice with his brush, or refuse the benefits of the methodical pursuit of music to his children. If by such means they cannot be molded into artists of the highest rank, they can at least be made to comprehend, to value, to copy or to approach the great works held up to them as models, and be thereby lifted far above the level of the "common herd."

If great naval architects are "born"—for argument let it be so—it is perfectly idle to decry the investigation of the elements of their success, and it is these which the naval architect examines into and lays bare before the world, if possible, so that all may benefit by positive knowledge, and no longer travel in leading strings or be subservient subjects to the black arts of mystification with which yacht builders are so prone to enshroud their work—something which in the end they may be less able to explain than members of the lay public incapable of producing a model equally as fast or able.

Besides, half a dozen successful yacht builders, stretched out over half a century, is not a very heavy crop of "inborn talent" for the public to depend upon. The yachts of really admirable performances hardly exceed one in fifty, and it is beyond doubt that the proportion would be much more favorable were the principles of naval architecture better understood and not so hastily thrown overboard at the occasional lucky strikes of jackknife art. It is comparatively an easy matter, after long experience with a certain type of vessel, to design or whittle out satisfactory craft of very similar dimensions and form, and for such work the necessity of theoretical knowledge may not be very pressing, for the effects of slight variations can be guessed at beforehand with some approach to truth. But let the builders who depend upon "instinct" once sheer off the well-marked course, and they are only too glad to grasp at any formula, any figures, anything "from authority," as the drowning man grasps after a straw. To suppose that structures differing so radically from the normal as a *Popoffka* ironclad, a *Devastation* monitor, a Czar's elliptic yacht, a *Seabelle*, or *Julianar*, could have been made such complete successes upon the mere guesswork of a "smart" individual, is sheer nonsense. In such works the methodical knowledge of a naval architect becomes invaluable, and in a lesser degree the same holds good in the modeling of craft of a moderate tonnage, be they yachts, smacks, or launches.

On the whole, if there are cases where the world is happier without knowledge, it cannot be denied that the more we know the better. We fail to see that the opponents of scientific design have scored a point in favor of intuitive talent, precarious enough at all times, but think that if naval science has not yet reached perfection from a theoretical point of view the more all hands pull together the sooner will the science be reduced to a shape suitable for every-day application.

SOLDIER, SPORTSMAN AND NATURALIST.—We had a most pleasant call last week from Capt. Chas. A. Bendire, whose name is familiar to old and new readers of this paper. Capt. Bendire's command is at Fort Walla Walla, Washington Territory, whence he has come East to undergo a surgical operation; meantime he is visiting the museums of natural history and noting the advance in the several collections with which he is familiar. Much of a sportsman and more of a naturalist. Capt. Bendire has, during his twenty-five years of service on the frontier, enjoyed most favorable opportunities for indulging his tastes. The sections of country in which he has been stationed from time to time have been rich in scientific material, and more than one museum of natural history has been enriched with specimens sent from his post. Special attention has been given by him to ornithology and oölogy. His collection of American birds' eggs is very complete, and is probably unequalled by any other private collection in the country. On his present trip Capt. Bendire brings to the National Museum of Washington five specimens of fishes, of which one is the "red-fish," and three others are entirely new. Concerning the "red-fish," a memorandum from those who have had the task of classifying it places it as the *Salmu kinmerlyi* (Gill and Jordan), or red trout, first discovered by Dr. Kinmerly, in Chilhowick Lake, near the Frazer River, in August, 1859, and first described by Dr. Geo. Luckley in the "Annals of the Lyceum of Natural History," New York, VII, 1861, p. 367; full description

1873-3. The specimen, however, sent by Capt. Bendire was quite a revelation as to the size of the species, being three times as large as the others. Both were caught in the same month of the year, October, and while distinctly disclaiming any disposition to dispute the classification, the Captain thinks that his fish is a different one from the specimen examined in the Smithsonian.

VOLUME FOURTEEN.—We begin to-day a new volume, and as it has been for thousands of years the pleasant custom of men to mark the completion of one stage of life's journey and the entrance upon another by some token of good cheer, we have thought it fitting to express our good feeling at this time by some substantial evidence of satisfaction. Putting this into shape we appear with several of our departments in smaller type than heretofore. That means more matter in the same space. It is a change which will enable us to treat more satisfactorily the several departments of our field, and we shall take great pains in the future as in the past to put into the space accorded each department the very best material available.

As the years are advancing, and one volume succeeds another, we are reminded to impress upon the reader the value of the books thus formed. The file of the *FOREST AND STREAM* since its beginning is a vast library of entertainment and instruction. The numbers which make up a volume are well worth preserving and binding. The novice will find in the pages of such a journal full and explicit instruction upon every branch of the sportsman's craft. Several treatises upon game, gun-fishes and fishing might be compiled from its columns; and most admirable books of travel might be made up from the sketches of its contributors.

NOTES.—In striking contrast to the dashing and foaming rapids of Maine, St. Clair pictures the weird and funeral scene of a sluggish Louisiana swamp, where cypress trees, hung with Southern moss, are reflected from the dark waters of the alligator's home. "A Winter in Louisiana" has much romance and much strange adventure about it. Many of our readers will turn from its perusal back to the days of their own personal experience before the war. This is one of those sketches which reveal to us—or rather suggest—the wealth of entertaining sporting reminiscences stored up by our friends at the South. We could wish that St. Clair's pen might stimulate others to recall for our readers their tales of Southern sport a quarter of a century ago.

The Arcadians of Southern Louisiana have not changed since the day St. Clair kissed the *Rose de Teche*. The stranger finds them still the same simple, quaint people, preserving their odd prejudices and primitive customs. They are aside from the current—off in an eddy of the stream, where the flow does not disturb them.

We can put over so many of the countries of Europe into the single State of Texas, and have room for one or two Eastern States beside. Our correspondent, N. A. T., has the happy faculty of seeing scores of interesting things in the great State which he has made his own, and this faculty he supplements with another equally felicitous—that of describing what he sees. The fish problem he propounds at the close of his letter is one that will puzzle ichthyologists.

Among those who called at the *FOREST AND STREAM* office this week was Mr. Charles Gilchrist, of Port Hope, Ontario, who, many of our readers will be pleased to learn, has made arrangements with the Indians of Rice Lake to secure next fall a full supply of wild rice. The gathering of this cereal in Canada is reserved to the Indians, white men being forbidden to collect it. Mr. Gilchrist has already been very successful in securing from his Indian agents large supplies of rice, which he has shipped to all parts of this country, as well as to England and Scotland. The Indians go out in canoes through the rice patches, the man at the bow and the squaw at the stern, with two sticks or poles about three feet in length, with one of which the rice is drawn alternately from one side and then from the other over the canoe, while the other stick is used as a flail to beat the seed out into the boat.

If the responses are any indication, our colored pictorial posters must be accomplishing their mission in a highly satisfactory manner. We still have a full supply on hand, and shall be pleased to send them to all who may be inclined to post them where they may be seen and read. Attention is called to the prospectus of our commissions and prizes, as given elsewhere.

In response to several inquiries we may explain that we do not propose to publish a game and fish directory in book form. Such an undertaking would be futile, because of the constant change in game localities. Our plan, which we are now carrying into effect, is to secure all information of a useful character relating to fish and game resorts, to register such notes in a book here, and in turn give it to such of our readers as may wish to avail themselves of it. Comprehensively stating the case, we

propose to act as a medium for the interchange of information. We have been led to this by having long known the needs of gentlemen sportsmen, and have, after mature deliberation, adopted this as the most feasible and satisfactory method of supplying this want. That the directory to sportsmen's resorts may be of the most complete and valuable scope we cordially invite the active coöperation of every man who may be able to help us by his contribution.

The Bay County Sportsman's Association gave a banquet in honor of the State Sportsman's Association, at the Fraser House, Bay City, Mich., last evening. We were there in spirit, and only wish we could have materialized ourselves into tangible form to participate in the festivities.

"Is fish culture a success?" This question is not asked now as it was a few years ago. We are finding answers to it on all sides. To-day we publish a most emphatic and favorable reply in the report of the California Commissioners.

Anything coming from the pen of Mr. A. Cary Smith will be read with much interest and attention by all. The long experience of Mr. Smith in practical building and in the designing of numerous yachts of all tonnages, as well as the mass of statistics it has been his good fortune to accumulate during his long service as Measurer of the N. Y. Y. C. and S. Y. C., entitle him to speak as an authority upon all matters connected with yachting. We welcome his name to our columns, and know that the public at large share our pleasure in seeing his ideas in print. The very instructive lectures delivered by Mr. Smith before the Seawanhaka Y. C. form, as we know, a standard which governs the modeling of most of the yacht builders in America to a larger extent than any other source of information. As the question of measurement has more bearing upon the future models of both America and England than is generally supposed, we propose to give it all the consideration its importance deserves.

We have long since been satisfied that the importance of the protection of game from its natural exterminators in the animal world has not been sufficiently recognized. Some sportsmen's associations have offered prizes for the greatest numbers of vermin killed; among such clubs, that of Luzerne County, Pa., is conspicuous. Foxes, weasels, skunks, owls, hawks and all the pestiferous class of preying animals and birds destroy more game each season than the poachers and lawless gunners and trappers. Foxes are reported very abundant this year in certain sections of New England and the Middle States. Sportsmen in those same sections may, as the result, look for a scarcity of game birds.

CRICKET CLUB MEETINGS.—The annual meeting of the Staten Island Cricket Club was held at Delmonico's, Broad street, on the 2d inst. The following Board of Directors was elected to serve for the ensuing year: Mr. William Krebs, President; Mr. E. Wiman, Vice-President; Mr. E. H. Outerbridge, Secretary, 23 South street; Mr. M. M. Betts, Treasurer, 87 Leonard street; Messrs. William M. Donald, R. B. Whittemore, E. W. Stevens, W. H. Davidge and Ashton Harvey. The late Secretary, Mr. W. H. Davidge, read his annual report, the pith of which, including the club's averages, have already been published in the *FOREST AND STREAM*'s cricket columns. The Treasurer's report showed the club's income for last year to have been \$2,701.52. This does not include the gate money received from the Irish and English matches. After paying all expenses there is left a handsome balance in bank. The vote on the amendment to prohibit members who are also members of other organizations from playing against the club in matches was carried by a two-thirds vote. The clause does not apply to college, school or commercial elevens. This reform was much needed, not only to stamp the club's individuality, but also to protect one or two kindred organizations in this vicinity. The chair was instructed to appoint a committee of five to revise the present constitution and by-laws, and it was wisely suggested that the captains of both elevens are to be elected by the elevens, and not selected by the committee, as heretofore. The new mode will commit, as it were, each player to his choice, and will give less opportunity to "kick." A large number of new members were elected, and the propriety of building a new club house is in serious contemplation.

The St. George's Club had their meeting at Delmonico's, Twenty-sixth street, on the 2d inst. The following officers were elected for the current year: President, Mr. J. T. Soutter; Vice-President, Mr. G. T. Green; Treasurer, Mr. B. Mostyn; Secretary, Mr. G. Hyde-Clarke; Committee, Messrs. E. H. Moeran, C. W. Bance, David B. Gilbert, T. C. Richardson and J. P. Conover. The suggestion to divide the club's ground at Hchohen with the Columbia College Club has been referred to a special committee. The Secretary's and Treasurer's reports were both read and adopted; and the club trust this year to play several out-of-town matches.

GAME PROTECTION.

MIGRATORY QUAIL IN GEORGIA.—An Atlanta correspondent sends us the following note from the *Thomasville (Ga.) Times*, the first recognition he has seen of the presence of the birds in that section:—

Mr. J. M. Blackshear caught and sent to town the other day of ten of the sportsmen of New Jersey are in favor of a law prohibiting summer shooting. Are the wishes of one sportsman to be set aside for the unit? By reference to the records of the Senate, I find that the bill for the amendment of the game laws was introduced by Senator Lawrence of Sussex County. If there is a man in the State of New Jersey who is more competent to say whether summer shooting is exterminating the woodcock than Senator Lawrence I have yet to hear of him. Mr. Lawrence was born and brought up near what were formerly the greatest woodcock grounds in the Middle States, the Drowned Lands of Sussex and Orange Counties. No one will deny that where there were a hundred birds on these grounds thirty years ago there are but two or three now. Therefore, I say, if the woodcock are constantly decreasing under the present law, let us try to better their condition by the enactment of a more stringent one. Now, upon what grounds do the opponents of the reform base their objection? I hear them say, "We will not have any shooting if the proposed new law is passed?" Let me ask a question. How many woodcock will the sportsman get if such an alteration is not made? That is not, my brother sportsman, a question of how many woodcock you will get, but how many there will be. The clamor of the country is for the farmers to rally and defeat the bill.

What possible benefit the farmer derives from summer shooting is unknown to the yeomanry of New Jersey. As the woodcock of this State is an inoffensive little fellow, and never dares the summer crop to any appreciable extent, he cannot be called a pest, and the majority of our farmers do not revel in woodcock shooting. I fail to see the occasion for this hue and cry. Trusting that the present session of our Legislature will give us a law which will improve the shooting in this State, I am, yours in the interest of true sport, JERSEY.

There is nothing astonishing in the fact that the New Jersey summer woodcock bill should have its antagonists, for its opponents are mostly found on examination to be either selfish persons calling themselves sportsmen, or else villainously bad shots. The former, as a class, are the most difficult to deal with; they would blindly kill the goose that lays the golden egg, reasoning that as life is uncertain they might not be spared to be in at the catching. The other class are easily sorted out and readily disposed of. It would be well to have a special act passed in their behalf, allowing them the privilege of blazing away whenever the spirit moves them. For Heaven knows it would only keep our friend, the woodcock, in good dying trim, for woodcock are hard to "ground."

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl. "Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf-bird, phalarope, avocets, etc., coming under the general *Littorale* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value; State, Town, County; means of access; Hotel; Bait, Guides, etc.; Name of person to address;—after the following model:—

ARKANSAS.—Clinton, Van Buren County.—Little Rock and Fort Smith, Railway to Chimmors, from thence by wagon. Turkey, deer, bear in greater abundance than elsewhere in the State. No canabacks. From here it is easy to go to Sugar Loaf, Peter Creek, Owl's Cove, "Big Bottom," Greasy Valley, the "Meadows," the "Gould," Devil's Fork, "Possum Walk, the "Gulf," and several other desirable places. Country wild and mountainous; people friendly and obliging. Hotel—Hartwell Green, proprietor; \$1 per day. Address Richard Poe, Esq., as above.

—Mr. E. M. Messenger, of the Bromfield House, Boston, Mass., with a party of four others, has gone to North Carolina, where he will spend some weeks quail shooting.

—The caribou, *Cervus tarandus*, is seldom seen in New York City, in fact, not over twenty have ever been shipped to this market. It was our good fortune, however, to inspect, yesterday, at the restaurant of Mr. John Sutherland in Liberty street, two magnificent specimens, a bull and a cow. They were shot by an Indian in the neighborhood of the Rivière Dupont, Canada, and described by him as "nice fat," each deer having weighed in life over 350 pounds.

THE RIVINGTON GUN AND RIFLE CLUB.—The annual meeting of the club, formerly known as the Social Gun and Rifle Club of Philadelphia convened Jan. 17th, at the Union League Club, when the name was changed to the Rivington Gun and Rifle Club of Philadelphia. No doubt under the new title the members will acquire themselves individually as creditably as they did under the old name.

The reports at the annual meeting were of the most satisfactory nature; the membership numbers sixty-eight, and the club has no debt, with a balance in the treasury. That the meetings meant something last year will be learned from the following summary taken from the shooting record for 1879, and sent to us by a correspondent:—

The club gives an annual prize for the best score made at 40 birds from 5 traps, handicap rise. This was won by the score of 57 killed, the winner standing at 30 yards. The next best were 4 of 55 killed, 1 of 54, 3 of 53, etc.

Number of members who took part in these contests, 31; largest number in any one match, 21; total number of birds shot at in matches for above prize, was 1,231; killed, 871; missed, 350; percentage killed, 71; highest percentage in any match, 81; lowest percentage in any match, 63; number of clean scores of ten "straight," 7; highest individual score in four monthly matches, 37 out of 40, or 92 1/2 per cent.

Besides the above we have had a great many matches for other prizes, all of which were well attended, as you may judge from the following record:—

Total number of birds shot at on the club's grounds during the year 1879, was 7,481; killed, 5,337; missed, 2,141. Per cent. killed, 71, or, omitting double bird shooting, 73 per cent.

We also gave a prize for glass ball shooting from three Bogardus traps, 18 yards rise, won by the score of 76 broken out of 80. Excluding rifle shooting, we find there were about 16,000 shots fired upon the grounds during the year.

CRUMMEL.

NEW YORK STATE SPORTSMEN'S ASSOCIATION.—The Seneca Falls *Reveille* gives the following encouraging report of the preparations for the next convention of the Association, which will be held here:—

It having been decided to hold the annual shoot of the State Sportsmen's Association under the auspices of the Seneca Gun Club of this village, preparations are being made for the largest and most successful gathering of the kind ever witnessed in the State. Neither time nor expense will be spared in promoting the objects of the Association. The generous hospitality of our citizens will be extended to all members of the Association who may gather here during their annual tourney, and all our sportsmen will vie with each other in the magnanimity of their efforts to make this a most enjoyable and successful one. We hope for the attendance of an unusually large number of the sportsmen of the State. They may be assured that the occasion will be one of profit and of pleasure. Our home sportsmen to whom were entrusted the cares and responsibilities of the convention of 1872, and who managed it so successfully and satisfactorily, will have the coming convention in charge. The Seneca Gun Club, which has done so much for its country, will welcome, as Sibley, Hoag, Lawrence, Stacey, Parrish, Tubbs, Ten Eyck, Niver, Selleck, as well as many others, will omit nothing in its efforts to make the coming convention worthy of the highest commendation. The prizes which it will offer for competing shots will surpass those of any other meeting. They will be numerous, valuable and worthy of the sharpest contests. Already arrangements have been perfected for obtaining big birds in great numbers and there will be no delay because of any neglect in this respect. The convention will be held at an opportune time, and all our citizens will feel it incumbent upon them to contribute in every way possible toward making it a credit to our village and an honor to the Association.

VERMONT FOX HUNTING.—Pittsford, Rutland Co., Vt., Jan. 27th.—In issue of Jan. 15th I notice an account of a New Hampshire fox hunt, in which the parties bagged two foxes in one day. It is not unusual for fox hunters in our town to bag two foxes in a day's hunt. A few weeks since, Mr. Burdett and Mr. Morgan, of the place, went out with the company on a grand fox hunt. On Dec. 4th, Mr. Elliott and myself were out, and at 1 A. M. the first fox was started; at 3 P. M. the third fox was bagged, among them an old veteran who was toothless and tipped the beam at 13½ pounds. Two of them fell to my 10-bore. In this hunt only one dog was used.

E. S.

MASSACHUSETTS AND NORTH CAROLINA.—Marlboro, Mass.—The Marlboro Sportsmen's Club have held one glass ball shoot since the new year came in (Jan. 10th), and had a nice pleasant afternoon for outdoor sport. We had out about a dozen shooters, and shot sweepstakes. The President was the club, Dr. Chamberlain, making the remark, when he took the first prizes in succession, that his little gun had not forgotten its cunning, but after that, Eager, Fay, Lughton, Bodrey, Brush and some of the boys had a chance to shake hands with some of the money. We shall shoot once in two weeks the rest of the winter. One thing we copied from the Worcester Club, to which many of our members belong, that is to have hot fowl on the stove in the club-house all the time, so that the shoot is going to be a few weeks a man warm and in good humor, or at least it helps to.

D. S. Mooney, one of our most popular members, has just returned from Curruck, N. C., where he has been for the last eight weeks and has had some splendid duck shooting. One day he killed with his Schuyler gun one hundred and twenty ducks of different kinds, but a majority of them were red-heads. He also had splendid snipe shooting, and shot a few woodcock. He took his splendid setter dog "Boss" with him, and he was the admiration of the natives there, as they have nothing but duck dogs. They make very little account of anything but duck and sea-fowl shooting. The weather was very warm most of the time, which made canvas-backs very scarce.

NEW JERSEY.—Imperial Lodge, Tom's River, Jan. 31st. The weather still remains warm, with no ice whatever in the bay. The duck shooting remains good, with a prospect of continuing; and some good bags of red-heads and broad-bills, with occasionally a canvas-back, are made every shooting day. Monday, Wednesday, and Friday are the days in Musquito Cove, where the duck now are. Shooting on the main bay is allowed on all days.

S. K., Jr.

PENNSYLVANIA.—Allentown, Jan. 30th.—The one hundred and eighty-first quail, which were imported last spring, were released on farms in Lehigh County and are doing well. A lot, to my knowledge, not one covy was hatched. One or two pair were seen last fall, but where they are now no one knows. The land is full of "Bob Whites," and if the winter will not get worse we shall have plenty by next fall.

NOTES FROM KENTUCKY.—Mill Springs, Ky., Jan. 20th.—Our crop of quails is not up to anticipations based upon the multitudes of pairs seen during early summer. The very few wing shots of this county have hunted but little, and the annual influx of visitors has yet to report. Earlier a great many have invariably manifested so great a degree of pot-hunterian in neither sharing game with farmers over whose lands they shot, nor having game served where they sojourned, that numerous conspicuous posters would have surprised, and divers "Git out of thar's" amazed them had they come around as usual.

My first day's sport of the season, in company with an enthusiastic young visitor during the holidays, resulted in twenty-eight of the fastest quail that I ever saw in the same bag, and eight hares that were singled out because of their extraordinary size. Many wild turkeys have been killed in my immediate neighborhood; a deer was chased within carshot of my house recently; the music of a neighbor's pack in full chase is enjoyed semi-weekly—often if the weather be unusually propitious. The last report from three of the boys a mile away in twenty-eight of the fastest quail that I ever saw in the same bag, and eight hares that were singled out because of their extraordinary size. Many wild turkeys have been killed in my immediate neighborhood; a deer was chased within carshot of my house recently; the music of a neighbor's pack in full chase is enjoyed semi-weekly—often if the weather be unusually propitious. The last report from three of the boys a mile away

where Miss Ella T. Thibault presented the company with a handsome guidon.

Mr. W. C. Flower, First Sergeant of the company, accepted the gift with appropriate remarks, and in return of the compliment on behalf of the company, presented the fair donor of the guidon with one of the company's badges.

Archery.

WITH BOW AND ARROW AMONG THE WILD
PIGEONS.

AMONG THE numerous articles written for *FOREST AND STREAM* on the subject of archery is a communication from Will H. Thompson, whose views agree very well with my own opinions and early experience. But I beg leave to correct Mr. Thompson in the belief that he and his brother were at any time the only archers in the United States. During my boyhood days I lived in the mountains of the West, and I remember with my first impressions in the use of the bow, and subsequently became much attached to that kind of sport. Partridges, wild pigeons, squirrels and numerous small fowl fry victims to my aim. I continued the practice of shooting with the bow and arrow until long after I became familiar with the use of the rifle. It is a healthy exercise for young people; it is a means of training the chest and toughening the muscles; the exercise has never wholly lost its charm with me, and although out of practice for many years, I think that I could pull a pretty strong bow yet.

The bows which the Indians used in early days (say fifty or sixty years ago) were made of white ash or hickory, worked out of seasoned timber and washed over at different times with hot water. They became impervious to water and still retained the natural strength and suppleness. However plenty hickory and ash trees may be, there are comparatively very few which are of the quality which is required to make a good bow. The strings were made of a single strand of rawhide evenly cut and slightly twisted and made perfectly round by rolling, being about the size of common fence wire and apparently about as hard. Blunt-headed arrows were used for killing birds and small game, and were invariably used among the wild pigeon roosts and nesting grounds.

Among the earliest recollections of these latter days are those that carry me back to boyhood sport among the wild pigeons. Reader, have you ever visited the nesting grounds of wild pigeons? If not, I believe you have missed seeing one of the wonders in natural history. The first and most extensive nesting grounds in this State were discovered by the late General Harrison in 1823, and as early as 1823. The nesting began in Cattaraugus County, near the Allegheny River, reaching north to the town of Collins, Erie County, covering a section of country about thirty miles in length and supposed to average six miles in width, including a part or all of the following towns: South Valley, Cold Spring, Napoli, New Albion, Dayton and Towanda, most of which have been organized into townships. The nesting grounds cover an area of about an area estimated at 180 square miles, covered with a thick growth of timber, every tree bearing from one to fifty nests, according to size of top. Here I enjoyed the satisfaction of rambling through this enormous hatchery. Although I was a youngster at that time, the remembrance brings many fond recollections. I have visited some considerable number of hatcheries since then, but small in comparison with this. The nesting is in the tops of the trees, in the extensive forests, with an overabundance of food, and a nest, could support such a vast body of pigeons during the time of building, hatching and feeding, which lasts six or seven weeks, more or less. The building begins about the 1st of April, or before if the spring is favorable; of course the supply of food is the product of the year preceding, which has remained under the snow during the winter. The nest consists of a bunch of dry sticks, or twigs, and is so ingeniously constructed that they grow together, and they are so strongly and ingeniously connected with the branches that winds or storms cannot dislodge them.

leader, have you ever visited the nesting grounds of wild pigeons? If not, I believe you have missed seeing one of the wonders in natural history. The first and most extensive nesting grounds that I visited was in the western part of the State of New York as early as 1823. The nesting began in Cattaraugus County, near the Allegheny River, reaching north to the town of Collins, Erie County, covering a section of country about thirty miles in length.

[illegible]

One of the woodpeckers is where all the sticks and fangs were gathered, which were used in the construction of those nests. If there were only one or two thousand the material could easily be found, but when the number is increased to the thousands, we are unable to find it, where all the nesting material could be collected. It was seldom that more than one young pigeon was raised on a single nest, but occasionally two were found. During the time of building and hatching, the mast on the hatching grounds would be mostly consumed, consequently the old birds were compelled to forage for long distances to collect food while the young were being hatched. I have not the least water knowledge by which each pair is enabled to return direct to their own nest, which is a counterpart of the thousands of others in close proximity.

Perhaps there is nothing that will draw out a whole tribe of Indians, old and young, like a pigeon hatchery. The flesh of young wild pigeons is fat and juicy and fine flavored, and doubtless a great many of the boys and young men would have been here if the Indian's palate. Here were gathered at different points most of the natives, old and young, from three or four tribes of Indians. Here the best archers from the Buffalo, Cattaraugus and Alleghany reservations had met for a trial of skill. I am no well posted in the scores of modern times, but it was then and there that I saw greater feats in archery than I ever witnessed before or since.

At the close of the Seneca nation of Indians have wholly or nearly abandoned the use of the bow, save among the small boys.

Piney Falls, Jan. 13th. ASTLEY.

SCORING IN ARCHERY.

SAN FRANCISCO, CAL., Jun. -16, 1880

Editor Forest and Stream :—
In your issue of Dec. 25th I notice Mr. "Massasoit Bowman" comes to the front in favor of the present system of counting wanting more particularly to have the gold stand well in figures

One of his propositions is that the additional rings are a concession from good shots to poorer ones. A natural inference is that Mr. "Bowman" is one of the few who so badly use up the gold when ever they appear before the target meaning business. Another

natural inference (from this distance, decidedly more probable) is that he is among the army of archers, who, by an occasional scratch-gold, make up the average lowered by more whites and blacks, while his opponents keep steadily accumulating blues and reds. Granted, that the gold is the mark for all archers; I have yet to hear of one who can catch it every time, or who despises the red or blue when credited to his or her score. That the rifleman

have found the reedmoor target about right, is evident enough, and they don't worry over a "four" as much as they would if it made a difference of two instead of one against them. Why should an archer have a greater penalty than a rifleman for corresponding shooting? The two are more nearly alike than any other.

have found the reedmoor target about right, is evident enough, and they don't worry over a "four" as much as they would if it made a difference of two instead of one against them. Why should an archer have a greater penalty than a rifleman for corresponding shooting? The two are more nearly alike than any other.

sports I can recall, just now. I claim that a score of 200 made up of blues and reds, is better than a like score made up all the way from white to gold. I claim further, that the blue-and-red man is a better archer than the other, and should be entitled to as much consideration in the matter of system of counting. As far as the question of having gold for the mark goes, a target made up after the standard that I have very little claim for the majority of archers, and detract very much from the pleasure of shooting, as few archers would find much pleasure or satisfaction in spending most of their time chasing after arrows which missed the mark. If Mr. "Massasoit" will put up a clout of that sort some day, and try, say ninety arrows (American Round allowance), I fancy his respect for the additional rings would increase in proportion to the contracted appearance of his score, and fatigue of legs wearied with much arrow hunting. I remember my first impression of the present system of counting was to wonder what gentleman took the time to study up such an odd system to impose on the coming archer, when the natural first idea would be of general successions, 1, 2, 3, 4, 5; and the next impression was to wonder how long it would take the archery fraternity to avasten to the fact that the system should be changed and (in my humble opinion) improved. It would make it more intelligible to the general public, be more easily counted and understood, and save mental wear and tear of scorers and shooters. I would suggest to my New England fellow-archer, that, after he had tried the new system, 4, 5 out in a big full-faced fellow, Mr. Conyposit would perhaps look as big to him as a (smallest you have, Mr. Conyposit) does now. At all events, I hope the discussion now going on in your columns will eventually lead to the change, and that it will be made soon. I want all the whites I usually get to stand a better chance; and perhaps Mr. "Massasoit Bowman" won't object to that sort of thing himself, after he gets a little accustomed to it. We can't all be champions. The California archers are talking up a League for the Pacific coast, and, if accomplished, the Eastern archers may reassured this change will be strongly advocated, and, as far as I can judge, adopted. When will the National Association do as much? PACIFIC POOR SHOT.

GALESBURG, Ill., Jan. 10th, 1890.

Editor Forest and Stream:—

Permit me to express my sympathy with Mr. Brownell in his desire that the present system of archery scoring be reformed—at least thoroughly discussed.

The advantage that larger arrows have over smaller, is comparatively a small matter, and the difficulty of determining upon which side of the line the extreme point of the arrow strikes, is obvious. A much better plan would be to give to every striking two colors half the sum of both. Thus, large arrows would have the advantage just outside the dividing line, and small ones just inside.

The element of luck at long ranges can be made more unimportant in a better way than by changing the relative values of the colors of the target. Leave these values as they are, and add something to the score for each hit as such, say, at eighty yards, one, at one hundred yards, two. I give an example at each distance:—

Present Method.		Proposed Method.	
80 Yards:	24 Hits: Score, 102.	24 Hits: Score, 102.25—130	
	23 " " 103	23 " " 103.25—123	
	22 " " 104	22 " " 104.25—116	
100 Yards:	18 " " 81	18 " " 81.50—110	
	17 " " 82	17 " " 82.50—103	

Of course, the amount of allowance for hits should be determined by the judgment of our most experienced archers; but it seems to me that there should be some allowance at the long ranges.

My \$25 bow is knotty and crooked. I know no better than to select such a one; but, after all, I selected better than I knew. The record shows that, though "a run up" to look at, it is a good un" to shoot. This record begins August 21, 1879. Since then I have recorded 131 Yards, 4,464 arrows; 438 American Rounds, 8,930 arrows—total, 5,294 arrows.

Many series I did not record at all; neither is account made of flight-shooting, in which I have indulged considerably; and, especially it will be observed that there is no record from June 1st to August 21st, during which time I shot quite as assiduously as later, though at shorter ranges. I think I must have shot at least 15,000 arrows with my bow, I have broken several strings upon it; and three times inadvertently pulled an arrow through it; still, the "crooked old stick," as one manufacturer called it, is there—the only bow I use. A few days since it threw an ordinary forty-six target-arrow two hundred and thirty yards. I need not say, while I am pleased with my bow, I am ashamed of myself; but such a verdant anchor needed just such a tenacious bow.

Permit me to say in conclusion, that the purpose of a bow, as it seems to me, is not to last, but to shoot. I have a Japanese bow that I never use, though I am sure I could never break it.

T. H. W.

HAWTHORN'S VS. PEQUOSETTS.—Boston, Jan. 24th.—Match between Hawthorn Archers, of Boston Highlands, and Pequot Archers, of Watertown. Two rounds of 30 arrows each, ladies, shooting at 30 yards, and gentlemen at 40 yards:—

HAWTHORN ARCHERS.

	1st Round.	2d Round.	Total.
F. H. Brackett	148	152	300
Dr. J. Dwight	131	139	270
H. Worthington, Jr.	173	131	304
Chas. A. Smith	150	150	300
Miss B. Wilson	141	115	256
Miss F. W.	130	118	248
Miss J. Wilson	120	117	237
Miss L. Brackett	120	119	239

PEQUOSETT ARCHERS.

	1st Round.	2d Round.	Total.
A. S. Brownell	124	152	276
S. L. Abbott	135	123	258
Miss Walker	117	107	224
Miss Sibley	85	119	204
Mrs. Shackford	110	79	189
Ladies' Average	105	103	208
Gents' Average	123	127	250

Several of the archers have not shot for some time, and this circumstance, together with the very trying light on the targets, affected the scores considerably. Several of the gentlemen have frequently passed 200 score, and the ladies have shot as high as 175, at 30 yards, and 141 at 40 yards.

NEW YORK ARCHERY CLUB.—The New York Archery Club has persevered in its search for winter quarters, and is now admirably located at the Ninth Regiment Armory, Twenty-sixth street, between Seventh and Eighth avenues. The drill-room of the armory, the use of which was obtained through the courtesy of Col. Stephen O. Ryder, is 90x200 feet, and 54 feet high, affording full room for 40-yard, 50-yard and 60-yard shooting. The regular meetings of the club will be held here every Saturday evening,

and as the club has so cordially opened its doors to the interested public we look for an increased interest in this noble game. The membership is rapidly increasing. At the last monthly meeting 150 new names were added to the roll and three others were proposed.

Last Saturday evening was the first practice in the armory. The ladies shot for the monthly prize, which was Thompson's "Victory of Archery." Mrs. Dr. De Luna won it with a score of 335. The gentlemen shot for the weekly badge, and it was captured by Mr. Breese with a total of 530—90 arrows at thirty yards. The return match with the Ascham Archers of Brooklyn, E. D., we understand, will now soon be shot; while the club has another challenge on its hands from the Orinai Club of Hackensack, N. J. The gentleman who sent the two line-thread bow-strings a few weeks ago will confer a favor by sending his address to Dr. A. J. De Luna. West Thirty-second street.

NEW YORK VS. BOSTON.—New York, Jan. 30th.—Archers in New York and vicinity are respectfully invited to attend the official scores of the Am. Archen Round to W. Holberton, care of Conroy, Bissett & Malleson, Fulton st., or to W. C. Boecher, 237 Broadway, so that a team of six may be selected to shoot a match with the Boston archers next Decoration Day (May 29th), the first match to be shot at Mount Morris Park, and the return match in Boston on some later date. Scores to be sent in by May 1st. Matches for positions on the tea will be shot during that month.

W. HOLBERTON, President Orinai Archers.

—The veteran Major A. G. Constable, President of the Brooklyn Archery Club, has been unanimously elected Second Vice-President of the Grand Mutual Archery Association for the ensuing year.

—In reference to Mr. Gray's bow, which a correspondent stated last week was returned to the manufacturers because it was misshapen, Messrs. Conroy, Bissett & Malleson explain that the bow was sent back to them simply because Mr. Gray wished to exchange it for a heavier one—Mr. Gray's letter and the bow itself, both now to be seen at their office, showing this.

Yachting and Boating.

KEELS AND CUTTERS.—The new yacht now building by Alonzo Smith at Islip for Mr. J. G. Cassatt will be rigged as a cutter. The *Comet*, originally built for Dr. Vondy, J. C. Y. C., has been sold to Mr. Chas. Warren Lippitt, of Providence, R. I., and will be turned into a keel. Very, signs of the times.

YACHTING IN LAY JOURNALS.—It is unfortunately true that the lay journals have as a rule very poor accounts of yacht racing in their vicinity. Sometimes the nautical flights of the Bohemian tar are insupportable and wondrous in more ways than one. The Philadelphia *Sunday Mercury* is an exception to the rule, and a most agreeable one at that, for in its yachting column the hand of the adept can be traced in every line, and we are glad to know that our contemporary intends continuing in its good ways.

"SAPPHO."—This schooner has been laying up for two months past in the old harbor of Marseille, but has now been taken into dock to have her copper looked after and prepare for the great Nice races. It is also said that her spars will be lengthened to the old racing proportions. If *Sappho* will only be put in the hands of an American skipper she is safe for the big prize.

MEASUREMENT.—Classification according to length only is generally condemned, and this judgment has in our eyes all the more importance, since it is not only the expression of the majority but it emanates from the most competent yachtsmen best acquainted with the management of races.—*Le Yacht*.

NEW YACHT.—The generally accepted preferences among naval architects are: Wooden vessel equal 100, then iron vessel equal 60, and composite vessel 50. In small vessels the difference is not so great, especially when special construction or mischief playing is necessary to secure rigidity in iron sloops. Mischievous weights about as much as a wooden sloop, but has her weights disposed to better advantage for strength and stability.

THE MORE THE MERRIER.—Our esteemed contemporary, the *Spirit of the Times*, sees danger to American yachting in the fleet of steamers now building. But, really there is none; we have sea-room for all, and if a limited portion of the community were the greater certainty and greater speed of finewest steam yachts, by all means let us have them—the more the merrier. There will always be enough among the other half of the public to choose the romance, roominess, cheapness and adventure peculiar to the sailing craft. A glance at the fleet of big steam yachts in England shows that we are a long ways off from driving out the sailing yacht, for in America the preponderance of the latter is much greater than in England, yet one day the dire consequences to the property of the noble craft of cutters, yawls and schooners abroad from any inordinate or abnormal weakening in favor of steam. Anything that sets the American adrift and carries him out to sea away from the dyspeptic diet and business worries will be sure to make a man of him, whether he hoists his flag aboard a first-class steamer or at the masthead of a flying schooner. If the iron frames of deep draft, seaworthy steamers are going up in many yards, neither will the builder of wooden sailing yachts complain, for he is busy swinging his knee from morning till night. Prosperity in one branch goes hand in hand with activity in the other, for both are indications of the growing wealth of the nation.

LYMAN'S ROWING GEAR.—With the spring the demand for Lyman's bow-fencing rowing gear is likely to spurt up afresh. For family and sportsmen's use we know of nothing better, and Mr. Lyman has many testimonials indorsing the advantages claimed for his invention. Prices have been reduced. Mr. Lyman also builds excellent boats of all kinds. Send for his circular.

YACHTING.—Sturgeon Bay, Wis., has got an ice yacht, and undertakers are smiling at the business outlook. This is the opinion of the Sturgeon Bay *Advertiser*: "To travel a mile a minute is something to be proud of, and to tell to your grandchildren when you take them upon your knees to delight their innocent souls with the usual after-supper batch of lies about the wonderful experiences of your gladdy youth. But suppose that you stop at the rate of a mile a minute! Ay, there's the rub. Why, you wouldn't have any grandchildren to lie to. What's the use of traveling a mile a minute at the risk of a black walnut ulcer and a season ticket to the cemetery?"

PROTECTING SHIPS' BOTTOMS.—Says Iron: "It appears that during a surveying expedition in Natal, which was being carried out for the Colonial Government, the discovery was made that a strongly glutinous juice or gum, which issued from certain plants belonging to the natural order Euphorbiaceae, when cut with the

clearing knives, adhered so firmly to the blades that it was very difficult to remove. It was further found that the iron so coated did not rust, and that when immersed in the sea no barnacles nor marine life would touch it. In its pure state the gum is an extremely bitter and irritating poison. To render its application practical it requires to be combined with some other substance. To effect this it is necessary to dissolve the gum in a preparation of spirits, and in that condition it will readily combine with other pigments, the combination forming a material which when spread upon a surface gives a glossy coating to it, and one, moreover, which is impervious to air and moisture, while its own peculiar protective property remains unimpaired. A series of experiments were carried out on an extended scale, and were so successful that they led to works being established for the production of this composition on a large scale by the Protector Fluid Company, of No. 8 Leadenhall street, London. The reason of this success is explained by the circumstance that the juice of the Euphorbia, which forms the base of the fluid, being of such an intensely bitter nature, paralyzes the efforts of all insects to attach themselves to a surface or bore into any substance coated with it. With regard to its practical application to ships' bottoms, the testimony of ship-owners and others who have used it goes to show that the results are very satisfactory."

ADJUSTING COMPASSES.—In England some trouble seems to have been had about irregular deviations of the compass in new iron steam yachts. It is well known that the observed deviations obtained from "swinging ship" are apt to undergo considerable modification with small changes in climate, and the compasses are consequently by the new iron yachts now building, too much care in obtaining the deviation (variation and local attraction) cannot be taken. Above all, have the tables prepared by an expert, and do not trust to the crude operations of a hero of the "belaying-pin" variety, who views with superciliousness anything that he has not been taught in the narrow range of his own experience.

COLLAUSIBLE BOATS.—We are certainly far ahead in the matter of collapsible yachts of "dingleys." The "Borbon" boat of England is too awkward as a "Coughtry," more complicated, folds in less space, more costly, and no better in model. We have recently inspected a "Coughtry," at Moore's, in Broadway, and for the small sum of \$35 the owner of the small sloop can get a handsome, buoyant and exceedingly well finished 9 ft. tender. With such boats in the market, there is simply no excuse for anyone going off on a cruise without a boat stowed on top of the "house," in the weather gangway, or below. A "Borbon" of similar size weighs 10 lbs., and exposes canvas only to beaching. In time an export trade in the "Coughtry" boats should be looked for.

THE CZAR'S YACHT.—Readers may remember the sudden discovery of a Russian vessel concealed through the last genuineness of Adm. Bal Popoff, of the Russian navy, under whose directions several "Popofkies" were built at the Kronstadt arsenals some years ago. A further experiment in this direction is to be made with the new yacht now building for the Czar. The contract has been awarded to John Elder & Co., of Glasgow. The model will be elliptic, with flat bottom, of the following dimensions: Length, 23ft. 6in.; beam, 13ft. 6in.; draught, 6ft.; draft aft, 10ft.; mean draft, 6ft. 3in. Three engines of 10,500 horse-power collectively, and 10,000 of the coal capacity. The cost, exclusive of furniture and decorations, will be \$1,000,000. The exterior will be watched with much interest, but we have not much faith in her racing qualities.

"CEYLON."—As this famous English schooner will be one of those most likely to be matched against *Idler* during the proposed visit of the latter to Europe, it will be interesting to note that she has had four tons of lead put in her keel, and lead substituted for the iron inside. She is bound for the Nice races.

"FORMOSA."—The Prince of Wales has bought this beautiful 100-ton cutter, and English papers expect him to do some more extensive yachting this year.

STEAM YACHTS IN ENGLAND.—They build them over there about as fast as they can be launched. In the language of the imaginative reporter, "there is now a perfect saturnalia of steam yacht building in England." Here is a sample, from Messrs. Cunliffe & Danlop, of Port Glasgow, are building a new yacht for Mr. N. B. Stewart. Length over all, 132ft.; between perpendiculars, 170 ft.; beam, 27ft. 8in.; draught of water aft, 13ft. 6in.; tonnage, over measurement, 600. Compound, surface condensing engines; cylinders, 28 and 46in., with 21in. stroke; indicated horse-power, 500. The new vessel will be built of iron, to class 100, under special survey of Lloyd's. Feathering screw of the Bevis patent, 10ft. 6in. diameter, of gun-metal. Rigged as a three-masted, pole-masted schooner, a masted, White Cap, Treen, Etc. Treened with a sharp knuckle to the bilge aft, with the advantage of light draft and cheap construction.

MINOT SMITH'S SHARPIES.—We learn that the sharpie built by Minot Smith at Port Jefferson, and now in the Southern fruit and vegetable trade, has given much satisfaction. His sharpie is, however, rather a departure from the orthodox, and in principle actually approaches the sloops. Forward she has a narrow floor dead-rise to her floors, which starts from the horizontal as the stepping line of the floors rises, thus securing a long, easy entrance, as well as a long run with moderate beam. Such a boat with a sharpie hull can be easy in rough water, but she is hardly to be considered a sharpie any longer, but rather a sloop model with a sharp knuckle to the bilge aft, with the advantage of light draft and cheap construction.

QUESTION OF TYPE.

Editor Forest and Stream:—

I have read with much interest the several articles in your valuable paper on the type question, especially those by Mr. Kirby and the one in your last issue signed "Corinthian."

Although far more ready with the tiller and the ribbons than when I take up the latter, *un peu malin* moi, to refute several assertions in those communications that are hardly consistent with the facts, I regret that in doing I shall have to refer so much to my own person and doings.

"Corinthian," to prove the superiority of American models, claims great speed for all of Fish's, Kirby's, and many of Ellsworth's and Steers' models, etc. According to the records Mr. Kirby has two only that have distinguished themselves in a signal manner, *Manning* and *Arrow*. His sail-boats are many of them fast. Mr. Ellsworth's *Comet* and *Elephant*, in the weather they were designed for, are wonders. Mr. Fish has produced some very racing craft, namely, *White Cap*, *Treen*, *Etc.* Treened and some others that, in my humble opinion, cannot be so classed, for instance, *Lola*, that upset on a summer's day in a whole sail breeze; *Enechantes*, that *Egeria* (half her tonnage) defeated in England in a thrash to windward, and—well I had better stop or I shall have some "touchy" owners about my ears.

Mr. Steers' *America*, allow me to inform "Corinthian," is not a "rule of thumb" vessel. She is a beautifully designed craft,

J. Day.	10	8	10	7	1.5	1.5
C. Livingston.	10	8	10	7	1.5	1.5

The bowling averages are omitted, as they were but imperfectly entered in the score books. George Giles, Jr., and J. Alworth, however, did excellently.

CRICKET IN AUSTRALIA.—The twenty-third contest between the rival colonies of Victoria and New South Wales had just been concluded when the last mail left for England. These annual, or rather six-monthly matches, are looked forward to with immense interest by the two cricket-loving colonies. A match is played at the commencement of each season in either Melbourne or Sydney, and the return is played later on. This year the first match was played in Sydney, and the Victorians took up from Melbourne a very strong team. The details will be perused with some interest by American cricketers from the fact that nearly the whole of the members of the Australian team which visited America in 1878 were engaged on either one side or the other. It will be remembered that that team was a combined one from the whole of Australia, but in the match under notice they were playing for their respective colonies, viz., Horan, Doyle, Blackham and Allan for Victoria; and Spofforth, Gregory, the two Bannermans, Murdoch and Garrett for New South Wales. As an instance of the immense interest taken in cricket by all classes of the community in Australia, we may instance the fact that thousands of people assembled outside the Australian office during the afternoon on which the match is being played in Sydney (300 miles off), the reason being that the proprietors of that paper make special arrangements to get the fall of each wicket and score telegraphed to their

office direct from the ground, and these particulars are posted up outside the office as soon as received. As stated before, this was the twenty-third contest, the most astounding ten victories for New South Wales and twelve for Victoria, the Sydney men having won the last six matches consecutively, but they still are two in arrears. D. Gregory captained the New South Wales men and Doyle the Victorians. The following is the score:—

UNITED STATES VS. CANADA.—The Hamilton Evening Times of Jan. 23d says, in referring to our suggestion: "We perfectly agree with the remarks in the FOREST AND STREAM; and as, according to all the sporting papers on the other side, the Hamilton Club is the champion club of the continent, and works perhaps more harmoniously than any, we would suggest that a meeting be held in Hamilton at as early a date as possible to form the association."

ROYAL CITY CRICKET CLUB.—At the annual meeting of this organization, held at New Westminster, British Columbia, Jan. 2d, the following Board of Directors was chosen for the ensuing year:—W. Moresby, President; C. N. Treer, Vice-President; W. H. Keary, Secretary-Treasurer; Committee of Management, W. N. Bole, J. W. Harvey, J. S. Clute. About thirty members were present. The club financially is in a flourishing condition. There are no honorary members, all being contributing and active. There are seventy-two members belonging to the club. The club intends to challenge the San Francisco Club some time in May.

DESTROY THE VERMIN.—The following extracts from an address recently delivered by Mr. Everett Smith before the Sagadahoc Association for the Protection of Fish and Game, at Brunswick, Me., contain some very sensible suggestions relating to game protection. Mr. Smith's extended experience as a sportsman and worker in the cause of protection give him special authority on such topics:—

In Great Britain the creatures that prey upon the game are termed "vermin," and the extermination of vermin forms one of the most important duties of the gamekeeper. Upon a certain tree near the kennels, the gamekeeper hangs all the vermin of kind, that his master may behold practice exercises of his skill, that he may perform. I have derived much pleasure from the examination of such collections, not only by the variety of specimens, but by the proof of many more valuable lives saved by the sacrifice of these creatures. In the north of Europe and Great Britain the ravens and hooded crows are among the most deadly enemies to field game. These birds not only kill many young grouse, but also destroy their eggs. To game-keepers therefore makes special efforts to destroy the ravens and crows, as well as the hawks and owls, by the destruction of their nests and young, by gun, traps, etc. Weasels are diligently trapped; but the foxes, although the most deadly of vermin, are not killed as such, but preserved to afford sport with the hounds. In New England, however, where the natives of the country forbids fox hunting as practices in the olden times, or the Southern States, the fox should be treated as the inveterate poacher and outlaw that he is, and especial means taken to exterminate him. Those familiar with his habits know that the favorite resorts of the fox here are among the alders and birches, where he finds woodcock and young grouse in summer, and hares in winter. I do not know that foxes eat the eggs of birds, as do the skunks and some other small animals, but, if after an unsuccessful hunt for field mice in an old pasture, the fox seeks the adjoining coverts frequented by grouse and woodcock, he is only too sure of capturing a substantial and dainty morsel. The gentle and unsuspecting nature of the woodcock renders it an easy prey to the fox, and it is especially subjected to his attacks, from the fact of residing in just the places most frequented by the fox at all seasons; and it loses so early in the season, that one of the first birds to afford reward a change of diet and gratification to an appetite that has become ravenous from the short rations of a long winter. Of the "vermin" in this State, the foxes and weasels are foremost, and I would urge all persons interested in the protection and increase of ruffed grouse and woodcock to take active measures to exterminate them. I would suggest for the furtherance of this object, that sportsmen's associations of the kind, to the value of the skin, but an inducement for the trappers to take them. The practice of putting out poisoned bait is highly dangerous, not only to the lives of all the dogs for miles around, but persons have been seriously poisoned by skinning animals thus killed. Trapping is a most effective method, and often a whole family of foxes, black and young, may be taken by traps. The following method is often very successful: Let the trapper select a knoll in the vicinity most frequented by the foxes, and plow two furrows, the longer the better, over this knoll, crossing at right angles on its summit. At the point where the furrows cross each other, set the trap; and if this is well done many foxes will be taken during the season,

Woman's Column.

A MICHIGAN SPORTSWOMAN.

IT behoves us women to improve every opportunity that is presented for us to come to the front and show that we are competent to write, speak or vote, just as the case demands. We as a class are not thought to be quite so inferior to the opposite sex as we were in days gone by, yet there is still existing a feeling of superiority over us. To prove this a fact, take a remark heard gentlemanly concerning the first article that appeared in the Woman's Column in FOREST AND STREAM. It was this: "No one need try to make me believe that a woman wrote that, for its too well written." Now I believe a woman wrote it, and that said gentleman will see twenty years have elapsed that a woman can not only write a spicy article for a sportsman's journal, but is capable of doing any work that requires brain power equally as well as a man.

I do not know whether the editor of FOREST AND STREAM be a woman's-right's man, so I will not write a suffrage article, but I do think he would not have been so kind as to give us a column in his paper if he had expected it to be filled with lines utterly devoid of sense. I thank him for paving the way, so that editors of other papers may follow after. He has given us ladies an opportunity of sending a few pleasant murmurs among our friends in writing, and in the words of Sol Smith Russell, I say: "Girls, improve your opportunities."

My object in writing this article is to have one more added to the list of women who do not think it vulgar to use firearms. I never awoke to the fact that I could use them until one year ago last spring. My husband and I were in Petoskey, Mich., at that time. He went to kill pigeons, for they were there in great numbers, 1 to 50 in the country. He had from the first of our acquaintance been anxious for me to learn to use firearms, and so on this particular trip he took a gun with him for me to use. Well, the second morning after our arrival I decided to go with him to shoot at pigeons, never thinking I could hit one, but, strange to relate, I came in at noon with two dead birds, shot by me. This was the first of many happy hunting days to me.

Since then I have been more successful; I can kill more than two birds in a forenoon, now. As I look back to those first two pigeons, I know it was nothing but an accident my killing them, for I was too excited to take aim. It was at one time a mystery to me to know how my husband could arise at 2 o'clock in the morning, eat a cold breakfast off the mantelpiece, and hurry out into the poisonous early morning air, some hunting ground that must be reached before sunrise, and call it fun. I marvel no longer. The mystery is solved, for I can do the same thing myself, now. I am on hand to go every time he is.

It's not so much the killing of birds I enjoy, as it is the pleasure I give my husband by going with him and taking an interest in his sports. He will punt a boat for me a whole day, just for the sake of seeing me shoot ducks; and in the field he never—well, "hardly ever"—shoots at the same bird I am aiming at. He has never served me but one mean trick since we have hunted together, and that was last summer. I decided one afternoon that I would like to try my hand at shooting meadow larks; so we drove from our home about five miles, and came to a field where there were quite a number of them; but they were a long ways over in the field away from the road, so my husband, pointing to a stump near by, said to me, "You take your gun and sit behind this stump, so the birds can't see you, and I will go across the field and scare them up so they will fly your way." Well, I, as a dutiful wife, minded, and stationed myself, gun in hand, behind the stump, and he went across the field to send the birds to me. I sat there for some time; at last I heard him bang! In the wake of seeing the birds did not raise my head, but thought, "he has frightened some birds, and they will be coming right this way." But no; they did not come. Another bang! and yet another. Then I ventured to raise my head above the stump to see what my husband was doing, but he waved his hand for me to keep quiet; I sank down again; but I was in such a cramped position that I could endure it no longer. I rose up, just in time to see a hawk take a hawk for a hawk upon me that I had been a subject of foot play. Mr. M. had been having fun at my expense, but I paid him back by killing more birds before the afternoon was over than he did. I forgave him, and we had a delightful ride home at sunset.

I have killed quite a variety of game, pigeons, ducks, meadow larks, prairie chickens and partridges, and the best of it all, I have never had an accident in consequence of my shooting. Some say I will yet, and when I ask them why, they say, "Oh, because you are a woman." I call to mind one in particular who was very much alarmed for fear I would shoot my guide, whom I had with me in a boat when I was on the Jordan River trout fishing. This gentleman, who was afraid I would kill some one, was one of those "nice little men" with more money than brains, and I think I have killed him had seen me sitting in the boat, killing quail, that would come out so daintily on the trunks of old trees that overhung the water. He thought this very reckless, so he took my guide confidentially to one side and told him that his life was greatly endangered by being in that boat with me. The guide told him he did not need any of his advice; he was not afraid Mrs. M. would shoot him. This was quite a triumph for me, and I think the Chicago man will be less officious in the future.

There is one great drawback to this out-of-doors recreation, and that is the difficulty in procuring suitable clothing, especially foot wear, head covering and jacket that would protect us as well as the men are protected from the cold, warm and damp weather, and last but not least, bugs. When we West shooting prairie chickens I thought I had just time to wear, but it proved a failure. My dress was short, but it was of ladies' cloth, and oh! how those Nebraska burrs did cling to it. I wore men's boots because they were high, but the burrs got in the tops of them and I was far from happy. Why would it not pay some dealer in sportsman's goods to make a specialty of ladies' outfits, so that we can hunt and fish without suffering more inconvenience than a man does? J. M.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinac, Grand Rapids and Cincinnati Short Line

FOR THE
TROUT, GRAYLING, AND THE FAMOUS SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed for the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The THOUGHT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as too for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are good, far surpassing the average of the country now known to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Quids and Fishing Tackle Carried Free of Charge.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEBET, Gen'l. Pass. Agent, Grand Rapids, Mich.

Old Dominion Line.
THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Gloucester, Cobb's Island, and points on the Peninsula. City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Saturday, Sunday, Monday and Tuesday, at 2 P.M. Full information given on office, 197 Greenwich Street, New York.

THE SANDPiper.

THE little sandpiper that has a great stride
Like a king of the faïces, and toys with the tide,
Is a jolly good fellow of infinite pride.

He signals your presence, assuming much fear,
And pipes of the danger that's coming too near,
Or whistles alarm that others may hear.

He eyes you obliquely, a comical way,
And flutters a distance as much as to say,
This far and no farther, and there you may stay.

But if you should trespass he'll nod in disdain,
Then tell his displeasure with might and with main,
And skin o'er the water to safety again.

When danger has passed him he settles his plumes,
The mien of importance he quickly assumes,
Subsuequently searching he gravely resumes.

Ah, little sandpiper of fairy-like stride,
With beautiful nature so closely allied,
I've noted thee often with love and with pride.

A river is flowing through life to the sea.
A river that fancy oft pictures to me.
Where the soul is a rambler and thought is like thee.

—JEROME BUNNETT.

Spring Time by the Blue Ridge Trout Streams.

IN a former paper I casually alluded to an intention I then had of taking down from the nail on which for years it had hung, my long neglected fly-rod, and setting out in search of trouting localities more congenial to the lovers of fly-fishing. At the end of the long, cold, dry weather that persecuted us through May, after waiting and watching the heavens for days and days, the limit of my opportunities for absence was reached, and as the sun rose over the mountains on a harsh and dewless morning, I found myself with C., jogging away from home with distended saddle-bags and fifty miles of road between us and our destination. The rugged chain of the Blue Ridge Mountains loomed upon our left, and our horses' heads pointed to the north. With further particulars I will not bore my readers, since strangers coming to this part of the world to fish would be foolish to choose the eastern side of the range, with the wealth of trout streams that sparkle down the mountain sides of the western counties open to them. The case though is different with residents whose lot happens to be east upon the sunny side, for there is a vast difference to men with occupations, between a trip that entails two days upon the road and one that demands four. Neither will I tax the patience of my reader with a detailed account of a wearisome ride of fifty miles. The trout streams, or I should rather say the brooks that held trout higher up, trickled feebly over our horses' feet at the innumerable fords through which we crossed. The usual motley array of anglers for white chub and suckers that every stream-washed Virginia hamlet exhibits were there, seated on fence rails—a melancholy band. At one village, or a spot that had been a village about the time of the Revolutionary War, beneath whose crumbling walls dances a clear purling stream, the store keeper had erected over the water a rude pier from the summit of which his lordly legs are to be seen dangling from a court day to court day, and where doubtless, with one longing eye upon his store door and the other upon his float, he chews in silence and sadly ruminates upon the days that are no more. The populace are also there, in rows along the bank, or perched upon the rocks in mid-stream—black and white—sad and dejected.

"Caught anything?"
"Nothing."

And the refrain is echoed dismally from mouth to mouth along the shore. The thought occurs to one that if such a show of anglers can be turned out in such an unpromising state of water and weather, what a happy time the chub and suckers, the homy-heads and catfish must have of it on showery days.

Ask me not to recall the wicked—the cruel fabrications as to mileage that were poured into ears ears along that red and winding track. As an old horseback traveler I am prepared to find men and women who will without malicious intentions double or halve a distance that they

may traverse twice a week. I am prepared to come across individuals who look you straight in the face and calmly deny the existence of considerable towns six miles from where they are standing. I am not at all surprised when a blacksmith of good character, or a very high-toned store keeper tells me my destination is five miles off and I find it fifteen—but the dwellers upon this Virginia highway fairly and squarely outlied any roadside population upon whose tender mercies I have yet been thrown. Their diversity of opinion not only on several occasions deprived us momentarily of our breath, which was a small matter, but finally robbed us of half our much required night's rest. The small hours must have been tolling ere the early moon at length rose just in time to throw her rays upon the chimneys and gables of the hospitable mansion that was to be our shelter, and it is needless to add that that night the terms bed and sleep were synonymous. I don't know that there is anything, to my idea, more heart-breaking than the act of traveling in the darkness of the night on an unknown road in strange and thickly wooded country. People who are accustomed only to the superb highways of the Northern States, and whose idea of road traveling is to sit behind trotting horses and watch the milestones dash by every few minutes, would find it hard to realize the tedium of accomplishing long journeys through countries where a more primitive civilization exists. In winter time let us forbear description; we are supposed to be writing about trout fishing, and gladly do we confine our utterances to matters pertaining to the leafy months when, if it has not rained for a few days, and you are riding, not driving, and it is daylight, your wife and family may see you start without particular cause for alarm. But supposing your route to be through the Piedmont section of the State, and any of the other conditions are present, if you have not already insured your life I should recommend you to do so for a considerable sum. But, jesting apart, when a strange road enters a river, on a moonless night, that you take it for granted only is shallow and apparently never emerges again, the most equable tempers are apt to be tried. Such is frequently the case where a mountain torrent for several hundred yards does duty for a road—evident, though uncomfortable by day, but by night, bewildering.

I am, I'm afraid, a little hardened by constant familiarity to the sublimity of nature, but as I looked out of my bedroom window in the morning the panorama that the raising of the blind revealed was beautiful in the extreme. The sun, I am ashamed to say, had risen, but had not yet dried up the dew drops that glittered over the surface of the mountain lawn, on fragrant hedges of esage orange, and on the fresh green leaves of myrtle and of ash. Beyond stretched a long and level valley, rich in fields of wheat and clover, through the centre of which lines of willows and alders marked the course of a stream whose murmuring was plainly audible in the stillness of the morning air. In the background, dwarfing everything else into insignificance, rose the mountains of the Blue Ridge, clothed in the leaves of myrtle and the glory of spring. Not a cloud hung round the clear cut pinnacles with which each summit was crowned. Cold and distinct their razor edges, bristling with winds, swept and ragged forests, cut the sky and the ear could almost fancy the sound of the waterfall that leaps down those fairy glens on which the black shadows of early morning were still resting; but in the words of Byron, if I do not misquote them:—

Tired of up-gazing still, the wearied eye
Repos'd gladly on the sun-bright vale
As ever spring yield in grassy dale
Where a bold river breaks the long expanse,
And woods alone the green leaves of myrtle and of ash,
Whose shadows in the glassy waters dance,
Or with the moonbeams sleep in midnight's solemn trance.

Alas, in our valley there was no sign of rain. The buzzards soared till they became as specks in the sky. The swallows wheeled far from earth. The wind blew gently and unmeaningly from the South and anglers' hopes were at zero. So disappointed, with no fishing anywhere but enthusiastic, we started with our host, and laden with supplies for two days to our fishing grounds. After a seven mile ride along the banks of a most charming river we arrived at its forks in the angle of which, at the base of the mountains, exactly where the realms of trout and creek fish met, we drew rein in front of a picturesque house with surroundings very different from those usually found in the rude homesteads of the mountaineers. Here dwelt Zach whose rod tree has ever been a rendezvous to the few anglers that come from a distance, and who, always a keen trout fisherman, has of late years been enrolled among that best order of piscators—a fly-fisher.

What might be called the "rise of fly-fishing" on the trout streams that unite their waters at this point is not without interest, and we devoutly hope it is or will be already taken place and what will in some future day take place on many another mountain river.

Some half dozen, or less, years ago an artificial fly or a jointed rod was a thing unknown, and all the angling that was previous to that time done was confined, or almost entirely so, to the mountaineers, who own or rent

land from the population for six or seven miles up each fork.

About 1874 two gentlemen from the nearest city created some astonishment and raised to a considerable extent the derisive mirth of the local fishermen by wading up the middle of the stream, rigged out with tackle, etc., from London or New York, and armed with ten foot fly rods, landing nets, and creels. The scorn of the old "boss" fisher of the mountains knew no bounds. I can well picture to myself old Jessie roaring with laughter from beneath his vast forest of beard and whiskers as he laid the small hook of a black gnat upon his rugged palm, "What! catch trout with that air hook and bit of feather?"

However, catch trout they did, and as old Jessie in these days now says, "They pinely raked 'em."

Since that day the superiority of the fly has been unquestioned, and even greatly exaggerated; too much stress being laid by the mountaineers on the lure itself and too little on the manipulation thereof.

Other gentlemen from a distance have since sought the sport—a new angling era opened—and now the talk along banks is not of poles and smoods and stick baits and such like barbarous jargon, but of cooh-y-bondus and red spinners of reels, fly rods, and casting lines, while for a half worn out fly a lad will willingly carry your basket and net all day. Old Jessie confesses that his reign is o'er, and that " 'em' ar fellas from the low country can beat us all with their darned flies and fixin's." Jessie occasionally fishes with a fly under protest, but he likes somehow or other to be alone at the time. Whether he designs to play his fish has not been fairly ascertained, but it is supposed from the rapidity with which the few flies he can get hold of vanish, and from the amount of "whalers" that he "hangs" but "break away," that his treatment of his fish is not of a yielding order.

Twelve o'clock on a bright May day, with low water, is not a obsequy time to commence fishing, and in this case the result justified the outlook, for not till 4:30 did any one of us, I believe I am correct in saying, even rise a trout. The simmering hours of noon sweltered by, the mocking rays of old Sol pierced even the leafy canopy above our heads, and that bright and hopeless aspect of things piscatorial reigned everywhere that causes the most enthusiastic angler to wind up his line, lay down his rod, and seek some shady spot, where, if the insects allow him, he may stretch his limbs and wait for better times with all the patience that, as a member of the Brotherhood, he is credited with.

There is a certain indescribable point, however, even on the warmest afternoon, when a decided change becomes evident to the keen instincts of the trout fisherman; a change that marks, however faintly, the approach of evening. When the sun has fallen low enough to lose his full force, and his light rather plays round you broken by mountain tops and woodland trees, than glazes as before on the back of your neck, long shadows creep over the pools and quiver in the gentle breeze that so often heralds the close of day. In the deep gloom a dark feeling arises that almost makes you shiver, and a gray light steals over the water that tells the angler his time has come.

A bit of moss comes sailing down the current between the covered rocks and down into the long still pool we have so long been sleepily watching, till plash, plash, its long unrolled surface once more breaks into life, and as the circles widen and disappear, our energy and ardor return, and slipping off a woodcock for a coachman we turn our faces down stream, and try with probable success the pools and riffles that had appeared so tenantless in the morning. Thus it was on the day in question; the evening feed, and a very short one at that, was our only chance of scoring. At every turn during this short interval one met a brother of the angle who had hurried down from his corn patch high above our heads, dragged his ponderous sapling from its hidden corner in some ivy thicket, and was thrashing unmercifully the surface of a well remembered pet pool with the discarded remnants of a "coachman" or a "miller." No unwieldy stream was this—a "no-sophisticated trout were these!—but highly educated specimens of the finny race, and carefully instructed day by day. An open water near a Scottish border town is not more thickly lined upon a fast day than is this laughing, brawling river at certain times of the day and season, but it is none the worse for that; the fact, since the "bed-ticking" business was stamped out it is said the trout have actually increased. We only caught twenty-five between the three of us that evening, but on the other hand it must be fairly admitted that they were twenty-five trout, not five trout and twenty troutlets, as is often the case in such streams, and weighed exactly eight pounds. On arriving at dark at our quarters we found Zach away at a hole where a week previously he had landed a trout of the astonishing size (for the parts) of two and a half pounds. Since then he had hung and lost, according to his own account, several "thumpers" in the same pool by whose banks he had resumed his post night after night, where the glancing

(6) A method the mountaineers had of sinking a bed-ticking in a pool and scooping the fish out previous to the State fish law.

of his white hickory pole might be seen by travelers along the wagon road long after darkness had fallen and the stars peeped forth. Long-tongued fame has it that many of Zach's highly prized and hard gotten flies sail backwards and forwards through the clear depths of their pool firmly imbedded in the grim jaws of monster trout. Another report affirms that Zach was one night seen prone on his face at the brink of the pool gorging with what was supposed to be, in the darkness, a gigantic fish, when suddenly there came a splash, followed by a dead silence, and then the surrounding forest was addressed with an oration that, according to my informant, was evidently more suitable for the place than the place, than these pages. But Zach is as good a sportsman as ever breathed. Reared among pot-hunters that had never heard of a fly, and one of the most successful bait fishers of his district, as soon as ever the nobler art was introduced among his people, his sporting instincts were superior to all native prejudices, and flinging aside his bait box and his hooks, he began with the disadvantage of rough tackle his sporting life over again, and has gone as far as hooking trout go at any rate, a very fly-fisher—he is a boisterous advocate of his new craft and amusingly contemptuous of any other.

The next morning showed signs of rain, and I started off alone, commencing about a mile above the house, where the fall was particularly steep, and forming thereby a succession of as perfect pools as the eye of angler ever gazes on. The first half-hour promised to be a repetition of the preceding day, not even a rise came to him. On a sudden, however, a slight spattering of rain began to fall, and at the same moment a heavy bit of flies came sailing down the water. Flop went a trout in a tempting spot beneath a rock where I had in vain made many casts. In an instant I felt a new man, and drying my flies with a sweep in the air, dropped the leader about a foot above his nose. In less time than it takes to relate, the fish was in my net, and I was off to which in due course was safely basketed. The pool was not twelve feet wide, but fishing up-stream and landing my fish at the tail I managed to take two more half-pounders out of it—an unusual contribution for so small a space. In the course of the next hour several more fish were basketed and many lost from want of a landing net, after which they all but stopped feeding. Wishing to become acquainted with the fishing rapidly in a desultory manner thro' a drizzling, misty rain, and when its size became such as was eminently more suited to a worm than a fly. Eating a leisurely lunch and strolling back again to the head of the best water I commenced fishing down, and at the same time the rain began to fall in earnest. The discomfort of a stream of water pouring through the crown of a straw hat and racing down my back was, however, soon more than compensated for by the way the fish began to rise. What would I not have given for a landing net!

"The greatest drawback of fishing down stream, to my thinking, when fish run a fair size, is the amount of good water spoiled in landing them. And when you have a half-pounder in prime condition in a rapid mountain stream, upon the finest tackle, surrounded with rocky cliffs, and impenetrable woods, you know what a deal he will sometimes stand up before he is safe in the creel. Such was the writer's case for the rest of that evening. No trout could have risen better. I fastened a fish in every likely place on which my flies fell, and the river here was one long succession of likely places, and free from brush withal. About four o'clock the water thickened and put a stop to all fly-fishing for the rest of the day. I counted out for my share in Zach's kitchen thirty trout, the result of the day so abundantly put an end to a plump, even lot of fish. None were under a quarter, none over half a pound. Their aggregate weight was ten pounds. Zach returned from his pool triumphant with a three-quarter pounder about the same time. That night rain fell heavily, and all thought of fishing was over; so in the morning we bid adieu to Zach, not, however, till he had made him my fast friend for life by presenting him with some of the best trout of his earnest solicitation with some feathers, dubbing, etc., that had lain undisturbed in my book since the days when I was infatuated enough to scorn using bought flies, and to consume a good many precious hours that might have been better spent, in manufacturing my own.

I have before alluded to the semi-superstition with which ignorance has invested in these mountains the artificial fly. Of it I was fairly sick, and the opinion upon which happens to be a professional man, and I presume an educated one, or by way of being so. Two miles of the best water this enlightened being preserves specially against the use of fly. For bait fishing he gives permission freely. O, ye gods! When was there anything to approach this. The relapse of the civilized savage to barbarism is nothing to it. A preference I have heard expressed in these parts for the largest good ones because the latter is conducive to overdraw is a patch upon it. The rejection of a railroad offered to the inhabitants of the Upper James is, perhaps, the only instance of ignorance and conservatism combined that can in any way be mentioned in the same breath. However, to see trout in out of the way places preserved at all is something, though the above mentioned is certainly a remarkable commencement for a proprietor to make.

I rode home regret was the most prominent of my feelings that I had let so many years slip by in ignorance of these waters, and never before did I so heartily endorse the well worn line that old Virgil, I think, let us:—

"O mihi prestatos referat sic Jupiter annos."

RINGWOOD.

A MISSOURI BEAR HUNT.

"I MUST go over to that fellow, or he will blow all his brains through that horn. It must be Anthony, or Wills, for no other one of our party would make such a fuss over the killing of a deer." Suiting action to thought, I rode over to visit the man was tooting his horn so vigorously. On rounding a corner, a large thickset I came in full view of him. "I've got him," were the first words that greeted me as I came in sight. "Got what?" I asked. "A bear." "A bear, where?" "Here he is," pointing to the huge carcass of a black bear that lay motionless in the edge of the thicket. "How did you kill him?" "Well, you see that little hickory tree, I was standing by it, expecting every minute to see a deer come sneaking out of that thicket, when all at once I

heard a crackling of the brush, and looking around saw that fellow come galloping along, right towards me. I stood still, and when he got to that old log I let him have it. I was a little scared, and you see I nearly overshot him, but he braked back and down again, and I loaded up as soon as I could, pouring down the powder without measuring, and then pushed down the ball without any patch. I thought it took me longer to load than ever before, and then I let him have it in the burr of the ear." The slayer of the bear was none of our party, but a tall, sun-burned son of the sunny South, who was camping and hunting in that neighborhood, and was at that moment a happy man. That evening and the next day we feasted upon the bear-hunter's favorite dish, bear's liver, well seasoned, and partly broiled on a stick held over the coals of the camp fire, then covered with what hunters call the "cau fat" from the bear, and again held over the fire until well cooked.

We were a party of five on our annual hunt. For twenty years has "Mestier" roughed it in the camp for from three to six weeks out of every year, always being greatly benefited thereby. Hunting to me is a pleasure, although I work hard from peep of day until after some night has claimed the forests for its prowlers. In rain, in mud, in sunshine and cold, every day when in camp, except the Sabbath, is put in in hunting or fishing.

For the last eight years we have hunted in Southeast Missouri, sometimes in "Nigger Wool Swamp," and sometimes on Little River. The principal reason why our faces have been turned in that direction is from the fact that we found a railroad on whose magnificent coaches we were welcomed, and whose officers seemed to take pleasure in giving us accommodations. No railroad in this country offers better hunting facilities for the sportsman than the St. Louis, Iron Mountain and Southern Railway. When you have your game the agents, conductors and baggage men take every pains to help you get in and out of camp, and all kinds of assistance is given to get you to our families a deer fresh, clean and life-like, just as dressed on the clean leaves where it fell. Mr. O. W. Ruggles, General Passenger Agent, is efficient, gentlemanly, and ever on the alert in the interest of his passengers.

But to the hunt! We had made unusual preparations for this year's sport. While hunting last winter at a friend's house in the State of Missouri, I was told that the best way of killing a rifle, and on my return home wrote Mr. Van Dyke in the premises. We had settled upon a Winchester, between their '73 and '76 models, 30-inch barrel, 60 grains powder, and 300 grains lead, and had induced them to make me a gun to that order, and, in my opinion no gun was ever manufactured that provided a truer or more deadly weapon. It is absolutely accurate, shooting as close as any distance as over 100 yards. It is a killing rifle, and when you get over 100, and up to 200 yards, it requires no elevated sight or allowance for distance, but will put its ball where you hold it; and from the well proportioned load it does not jar you. It is a killing gun and will be largely used in the South. Their '73 model is an exceedingly satisfactory gun, and for close shooting is a paragon of perfection. Mr. Wills, one of our party, and an old hand at rifle work, had in his pocket a squirrel's head in a tree. I saw him sit in the tent and squint a squirrel out of a tree full ninety yards distant, hitting its head. He killed five out of the first six deer shot at with it, and a turkey less than 150 yards from him, if still, was in a dangerous proximity to him.

We were indebted to Col. L. A. Lindsay, a true, generous, whole-souled gentleman of the South, for terrific hunting horses. If open-handed welcome constitutes hospitality, then are the people of the Southern States entitled to that meed of merit from the sportsman of the North. They take us by the hand and give us abundantly of their stores. Isaac was cook, and Jo, boy of all work. We were each provided with a riding horse, had two wagons, an eight ounce, fifteen foot square Baker & Murray six foot wide tent, and a deer squirrel, and a turkey less than 150 yards from him, if still, was in a dangerous proximity to him.

On Nov. 19th we broke camp where we had been deer hunting and started for the bear regions. We found the parties with whom we had arranged for bear dogs in readiness for us, and soon we were in camp on a river in the swamps of Arkansas. The land was densely set with a heavy growth of timber, briar, and canebrakes. The most numerous game counted for dogs and found that the most numerous were ten and twenty-three dogs. Messrs. Eli Bradsher and Major Godby seemed to be the bear hunters, *par excellence*, and to them was given the control of the hunt. When about six miles above Camp "Guess" the reliable old start dog, showed evident indications that Bruin had been there. Very soon he gave tongue as he nosed on a log where the bear had walked the night before, and a wild yelp that was very true. The night before, and a wild yelp that was very true. The trail led into a canebrake, and when the dogs got half way in they jumped the bear and strung out with nine men following them at break-neck speed. The bear kept the heavy cane for several miles and then struck green and blackberry briars so dense that it seemed impossible for man and horse to follow. The horns of the black bear is in the region, and most inaccessible places the reputation of being a bold rider. We jumped logs, made roads through canebrakes, green and blackberry briars, vines and other impediments, all the time going as a speed that indicated insanity on our parts. On we went until, as we thought, we had left all the party far behind; now and then overtaking and passing some of the slower dogs. We had run some five or six miles when just ahead of us I heard a man urging on the dogs. Look-

ing, I discovered from the speed at which he was going that to be in at the killing I would have to abandon my leader and overtake the man that was outrunning us. The first opening in the woods that offered a reasonable hope I slackened my pull on Selim and away we went followed him, then from the excited number of the dogs I judged that they were about up with the bear. Again pulling Selim from behind and touching him with my spur we were soon up with the leading dogs, who had overtaken and were fighting the bear. Ah! grand indeed is the wild music of the dogs, rolling in the car in a wild tumultuous babel, when you know that they have overtaken and are baying a bear, the noblest of all game that is hunted by wild dogs. Running up to where they were, I saw the bear take to and climb a large black gum tree. I jumped from my horse—drew my revolver (an army size Smith & Wesson) and was in the act of shooting when I felt a hand laid on my shoulder and heard a voice exclaim—"Don't shoot!" Turning, I recognized my last companion in the chase who had ridden a "John Gilpin" race as well as myself. It was of no use, however, to urge and not to shoot. I had killed a small animal, but I had killed a bear, and in fact my nerves were tingling with excitement. I shot once—twice, and down rolled Bruin. The dogs covered him, and it was then apparent why my friend had requested me not to shoot. It looked as though the bear would kill the entire pack of dogs, as he was making frantic efforts to get them within his grasp. I ran up and putting my pistol close to his head, pulled the trigger, and by the time my two friends in the chase were down, and running up, poured broadsides into the struggling bear that settled him. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. By the time the two friends in the chase were down, and running up, poured broadsides into the struggling bear that settled him. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. By the time the two friends in the chase were down, and running up, poured broadsides into the struggling bear that settled him. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. By the time the two friends in the chase were down, and running up, poured broadsides into the struggling bear that settled him. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. By the time the two friends in the chase were down, and running up, poured broadsides into the struggling bear that settled him. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. By the time the two friends in the chase were down, and running up, poured broadsides into the struggling bear that settled him. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. I was then informed, and had it demonstrated that a wounded bear was a dangerous animal when hunted by a pack of dogs. My two shots had taken effect; one just behind the shoulder and the other in the neck. The one in the body would have proved fatal before the bear could have got away. By the time the two friends in the chase were down, and running up, poured broadsides into

dogs were then trailing when they jumped the Winingham bear escaped by the dogs all taking after him. And now, to sum up, we killed three bears before we left and thirty-two deer; a gray eagle that measured seven feet from tip to tip; turkeys, ducks, coons, swamp rabbits, squirrels, woodcocks, quails, etc., etc., and are now at home enjoying with our families the trophies of the hunt.

MESTIER.

Natural History.

THE BIRDS OF CHESTER COUNTY, PA.

BY B. HARRY WARREN.

(Continued.)

113. *Plectrophenax nivalis*, Meyer—Snow bunting; occasional resident; gregarious.
114. + *P. lapponicus*, Selby—Lapland longspur; winter resident; very rare.
115. *Pascuercus savanna*, Bonap.—Savanna sparrow; common; arrives April 18th to May 1st.
116. *Procellos gramineus*, Baird—Day-winged bunting; common; arrives March 20th to April 10th; during mild winters is sometimes found.
117. *Catherpes mexicanus*, Bonap.—Yellow-winged sparrow; frequent; April 20th to May 1st.
118. + *C. heslanti*, Bonap.—Henslow's bunting. I have never seen this species. Mr. P. G. Wickersham, of West Chester, informs me that he now has three eggs of this bird, taken near West Chester, Pa.
119. *Zonotrichia leucophrys*, Swainson—White-crowned sparrow; rare.
120. *Z. albicollis*, Bonap.—White-throated sparrow; abundant in spring and fall, but not abundant in winter.
121. *Passer domesticus*, D. and G.—English sparrow; abundant resident. By all practical, unbiassed observers in this locality this species is pronounced a pest, and its speedy eradication is generally hoped for.
122. *Junco hyemalis*, Selat.—Snow-bird; abundant winter resident; arrives in October, departs by May 1st.
123. *Guiraca ludovicianae*, Swainson—Rose-breasted grosbeak. I am advised by M. B. Eberhart that this species about eighteen years ago bred somewhat commonly. Mr. E. on several occasions found their nests with eggs and young; several of the latter were taken. One was kept as a pet four or five years. The last instance of its nidification in Chester County of which I have knowledge was near Deborah's Rock, East Bradford Township, on the property of Edge Cope. There a nest and three eggs were found by Titus Bennett, of West Chester. I think this find was in 1875. I have observed this bird as a migrant, not rare, arriving from May 10th to 27th.
124. + *G. carolinensis*, Swainson—Blue grosbeak; summer resident; very rare (Michener). I have never met with this bird in the county.
125. *Cyanospiza cyanea*, Baird—Indigo bird; abundant; arrives May 4th to 13th.
126. *Cardinalis virginianus*, Bonap.—Redbird; abundant resident.
127. *Pipilo erythrophthalmus*, Vieill.—Chewink; abundant; arrives April 18th to 30th. This bird occasionally feeds on the Colorado beetle. Last summer I dissected a male bird, which revealed two or three of these beetles.
128. *Dolichopus cornutus*, Swainson—Bobolink; red bird; common; migrant; arrives May 8 to 15.
129. *Molothrus pectoris*, Swainson—Cow bird; abundant; arrives March 5th to April 12. Mr. H. Garrett, of Willistown, has noted this bird as an occasional winter resident.
130. *Agelaius phoeniceus*, Vieill.—Red-winged blackbird; abundant; arrives March 2 to 30.
131. *Sturnella magna*, Swainson—Meadow lark; abundant; resident.
132. *Icterus spurius*, Bonap.—Orchard oriole; common; arrives April 30 to May 5.
133. *I. baltimore*, Daudin—Baltimore oriole; abundant; April 28 to May 4.
134. *Sceloporus ferrugineus*, Swainson—Rusty blackbird; common; migrant; arrives March 8 to April 7.
135. *Quiscalus versicolor*, Vieill.—Crow blackbird; very abundant; sometimes winter resident.
136. + *Corvus canescens*, Bartram—American raven; "very rare."
137. *C. americanus*, Aud.—Crow; abundant; resident.
138. + *C. ossifragus*, Wilson—Fish crow. I have understood that a nest was two or three years since found by a collector of this place along the Brandywine Creek. Michener says it is a "resident, rare."
139. *Cyanura cristata*, Swainson—Blue jay; resident; much more numerous in summer than winter.
140. *Ectopistes migratorius*, Swainson—Wild pigeon; small parties appear in the spring and fall.
141. *Zenaidura macroura*, Bonap.—Carolina dove; abundant resident; two broods.
142. + *Meleagris gallopavo*, Linn.—Wild turkey; resident in years gone by; now extinct.
143. + *Cathartes aura*, Bonap.—Pinnated grouse; "resident; now becoming extinct in this country." (Michener). This decidedly Western species we have never met. Our oldest sportsmen and several ornithologists say they never knew or heard of its being occurring in Chester County. Barnard does not give it in his catalogue.
144. *Bonasa umbellus*, Steph.—Ruffed grouse; common in certain sections; resident.
145. *Ortyx virginianus*, Bonap.—Quail; resident; common; frequently collect in large flocks and migrate southward.
146. *Coturnix coturnix*, Linn.—Migratory quail. In the early part of June, 1879, ninety-five of these birds were liberated in the several townships about West Chester, but as yet we have no positive proof of their breeding.
147. + *Grus americana*, Ord.—Whooping crane; "not common." This species I have never seen.
148. *Gallinula candidissima*, Snowy heron; rare migrant.
149. + *Herodias egretta*, Gray—White heron; "seldom found." This species I have never seen in Chester County, but have a specimen taken in Lancaster County, Pa.
150. *Ardea herodias*, Linn.—Great blue heron; frequent migrant; arrives April 2 to 15.
151. *Bidens lentissima*, Steph.—Bittern; frequent migrant; April 7 to 22. A male of this species, taken Dec. 5, 1879, along the Brandywine Creek, is now in my cabinet.
152. *Dulicoris virescens*, Bonap.—Green heron; abundant; arrives March 27 to April 12.

153. *Nyctalea glandulosa*, Baird—Night heron; common; arrives April 4 to 18.
154. *Charadrius virginianus*, Borkh.—Golden plover; rare migrant.
155. *Aegialitis vociferus*, Cassin—Killdeer; common; sometimes resident.
156. *Squatarola hutchinsii*, Calo.—Black-bellied plover; rare migrant. Michener records it as "summer resident; rare." We have no knowledge of its occurrence in summer.
157. *Philohela minor*, Gray—Woodcock; common; seldom occurs in winter.
158. *Gallinago Wilsoni*, Bonap.—Gray snipe; abundant spring migrant; arrives March 19 to April 1. Michener gives this species as a "summer resident." I have yet to see my first snipe in the summer, although during spring migrations I have taken numbers.
159. *Tringa vellosii*—Least sandpiper; migrant; somewhat common.
160. + *Gambetta melanotos*, Bonap.—Tell-tale. This Michener gives as a "summer resident; not frequent." Barnard, however, records it as "scarce." I have never seen it.
161. *G. flavipes*, Bonap.—Yellow legs; rare migrant. This is also mentioned by Michener as a "summer resident; frequent."
162. *Rhyacophilus solitarius*, Bonap.—Solitary sandpiper; common migrant, arriving April 25 to May 7. This bird Michener says is a "summer resident."
163. *Tringoides macularia*, Gray—Spotted sandpiper; abundant; arrives April 15 to 23.
164. *Actitis tringoides*, Bonap.—Field plover; common; arrives April 23 to 30.
165. *Rallus virginianus*, Linn.—Virginia rail. A gunner informed me that he killed a bird of this species along the Chester Creek, Nov. 7, 1879.
166. *Porzana carolina*, Vieill.—Sora; migrant; somewhat common.
167. *Fulica americana*, Gmelin—Coot; migrant; somewhat rare.
168. *Gallinula galeata*, Bonap.—Florida gallinule; accidental.
169. *Betta canadensis*, Boie—Canada goose; occur as a migrant in March, April and November.
200. *Anas boschas*, Linn.—Mallard; this was taken by H. B. Graves.
201. + *Anas obscura*, Gurr.—Black duck; rare.
202. + *Spatula clypeata*, Boie—Shoveller; rare.
203. *Atya sponsa*, Boie—Summer duck; occasional.
204. + *Fulix albica*, Baird—Little black head; rare.
205. *Althya americana*, Bonap.—Red head; occasional winter visitor.
206. + *Bucephala albeola*, bunter-bill; not common.
207. *Eristalisia rubra*—ruddy duck; frequent.
208. *Mergus americanus*, Cass.—Sheldrake; common in early spring, winter and fall.
209. + *Lopholagus cucullatus*, Reich.—Hooded merganser; rare.
210. *Thalassidroma leucifrons*, Linn.—Leach's petrel. During a gale in September one was driven to our door, and in an exhausted condition was picked up by Dr. Martin, who presented it to me.
211. *Chrocephalus philadelphia*, Lawrence—Bonaparte's gull; two or three specimens taken along the Brandywine.
212. *Hydrochelidon plumbea*, Wilson—Black tern; two specimens, male and female, were taken by Titus Bennett.
213. *Sterna wilsoni*, Bonap.—Wilson's tern; C. D. Wood has prepared specimens taken in the county.
214. *Sterna fuliginosa*, Gm.—Sooty tern. In the spring of 1878 a specimen was presented to me by a gentleman who found it dead in a field.
215. *Colinus virginianus*, Brunn—loon; occasional.
216. + *Podiceps griseus*, Gray—Red-necked grebe; "rare."
217. *Podiceps cornutus*, Latham—Horned grebe; rare.
218. *Podilymbus podiceps*, Lawrence—Carolina grebe; frequent.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATI, UP TO FEB. 1879.—One prairie hare (*Lepus campestris*), two kit foxes (*Vulpes velox*), five California ground squirrels (*Spermophilus beecheyi*), one raccoon (*Procyon lotor*), one opossum (*Didelphis virginiana*), one golden eagle (*Aquila canadensis*), three horned owls (*Bubo virginianus*), one red-tailed hawk (*Buteo borealis*), one scarlet tanager (*Tanager*), one prairie chicken (*Cupidonia cupido*), all presented; one brown coat (*Nasua narica*), one raccoon (*Procyon lotor*), five undulated grass parakeets (*Melospiza undulata*), hatched in garden.

FRANK J. THOMPSON, Superintendent.

THE BIRDS OF MEXICO.—Our correspondent, A. W. B. has been quite successful in collecting specimens of Mexican birds. He writes from the City of Mexico under date of Jan. 12th:—

Owing to pressing business I am compelled to return to the United States by next steamer. My collections are quite extensive, and I believe are the most complete ever collected in this valley, and are much finer than those in the National Museum, this city. I shall return perhaps next winter to work up the birds of the Atlantic seaboard, of which the history thus far is very incomplete.

Prof. Sumichrath, of the Smithsonian Institution, has just forwarded me a letter from Tehuantepec to spend the summer with him, which I was compelled to refuse. I shall leave an agent here who will forward specimens to my collection. My next trip will be from Pembina, Dakota Territory, up the Red River to the mouth of the North, and if possible to Lake Winnipeg or Hudson's Bay; start June 20th.

WILD BIRDS IN CONFINEMENT.—We are kindly permitted by the recipient of the following letter to publish it for the benefit of our readers. The experience of the writer is a most interesting one, and we hope that his example may be followed by those of our readers who are interested in our game. Much valuable knowledge ancient many of our most interesting game birds might be gained in this way:—

MY DEAR SIR: Your very kind letter of 11th to hand. In reply I beg to say I don't care if whether they are spruce birds or ruffed grouse, for I can keep either or both kinds in captivity. Two years ago last winter I wintered four ruffed grouse, and in the spring they laid sixteen eggs; but when setting time came they quarreled about the one nest that the coop contained, so I took the eggs and put them under a bantam, hatching some half-dozen, and some of them lived to be two weeks old, but finally died one after another, as I did not then understand their food. Last April a friend at Houlton, Me., sent me a pair of spruce birds, but the cock died soon after arriving. The hen laid four unimpregnated eggs,

and sat on them five weeks! She is now moulted, but smart and lively. Now if you can get me any other kind I shall be glad, and I hope you will be able to tell the cooks from the hens, and attach a small tag to the leg of the former so I can tell them, as I cannot always tell them apart. I am a cripple, and have been for five years more or less. I have been absent all summer in search of health, visiting many parts of the West; but I really believe that trip in the woods with you would do me more good than anything else.

I have a fine yearling buck caribou, tamer than a cossack lamb. I have four deer, two bucks, one doe and a splendid fawn eight weeks old. I have a fine old raven, four years old, from Sheffield, England; also a this year's young one, bred on the rocks on an island off Machias, Me. I have a pair of fine English ferrets, and next week I expect to receive from Hot Springs, Ark., a full-grown, tame white possum, which is as rare among ferrets as grasshoppers there as a white squirrel is with us. I shall also receive along with the possum a fox-squirrel, jet black, with the exception of a white ring encircling his body just back of the forelegs. Now can't I coax you down here to see me and my specimens of natural history? I have also some nicely mounted animals and heads.

M. W. CLARK,

Danville Junction, Me.

WANDERING WEBS.—Maysville, Ark.—I notice in your issue of Dec. 4th a communication from a correspondent in Milltown, Maine, speaking of showers of web floating in the air. Such phenomena are of frequent occurrence here, and are supposed by many to herald the coming of the Rocky Mountain locust (*Caloptenus spretus*), but the letter of your correspondent, together with your foot note and the observations of myself and others while in the East, would tend to make one doubt the correctness of this theory. Still these clouds of web in this part of the country are always accompanied by more or less grasshoppers, and as they (the web) come only from the North, West, or Northwest, would tend to confirm many in the belief that they are produced by grasshoppers; and as Professor Wise held that the higher air currents set toward the East, might it not be possible that the webs are carried to immense distances, and even to the Atlantic seaboard? Besides the many persons claim that these webs are only seen when the hoppers are on the wing to the North and West, and hoppers were reported plenty in parts of Kansas at the same time that immense clouds of web were floating over here, about Oct. 1st, 1879. So much for theory, now let us have facts from some one who knows. We refer our correspondent to what has already appeared in these columns and to the works which we have cited, for information on this subject.

E. W. SCOTT.

THE MANATEE IN FLORIDA.—Marietta, Ga., Jan. 31st.—Your correspondent, Mr. Le Baron, in his interesting paper on the manatee in your issue of Jan. 24th, would seem to imply that this animal is not found north of the St. Lucie River. C. J. Maynard, in his "Mammals of Florida," places it as far north as the Indian River Inlet, but "is confident that it does not occur in Mosquito or Halifax lagoons."

In the winter of 1879 the carcass of a recently killed manatee was found in the Halifax River lagoon, the skull and some of the ribs of which were procured by the spot by the writer and deposited in the museum of the Chicago Academy of Science, and it is believed by the residents on the Halifax that this animal still exists in the Tomoka and Spruce Creeks, fresh-water streams flowing into the Halifax at least 130 miles north of St. Lucie.

S. C. C.

OTTERS UNDER THE ICE.—Indian Rock, Dec. 19th.—Otters are as much at home in the water under the ice as they are in the air above it. This is my explanation of their power to travel long distances under the ice without breathing fresh air, though whether I read, dreamed, or was told it, I cannot say. Before the animal dives under the ice he takes in a good breath, and when he needs more air he breathes it out and the air rises in bubbles against the ice and the water purifies it; then the animal just puts his nose up and by some slight movement which I will not attempt to describe he gets it again. I have frequently seen where otter have crossed ponds two or three miles wide under the ice, by going in at the inlet and coming out at the outlet.

FRED.

Our correspondent's observations are interesting, but his explanation is a little too vague to be quite satisfactory.

PROPOS OF ALBINO.—A partial albino robin was caught by Mr. Drake, of South Cayuga, Haldimand Co., while it was feeding in his back yard, having been left by its companions this bird was caged and seemed to do well for a time, but finally died when he was found to be it. It is beautifully marked, the head and shoulders are pure white, breast mottled white and red, the upper and lower tail coverts are white, as are also occasional feathers in the wings and tail; bill and legs are straw colored. I was glad to preserve the skin and mount it.

Some years ago I examined the intestines of a partial albino black squirrel and also a blackbird, which was turning white, and in each I found tape worms. My robin underwent a like examination, and, strange to say, I found four tapeworms in his intestines.

Query—Is this always the case in albinos?

G. A. McCALLUM,

Dunville, Ont., Canada, Dec. 30th, 1879.

USEFUL INFORMATION ABOUT THE SKUNK.—Vinalhaven, Maine, Jan. 12th.—In your issue of June 12th, 1879, your genial and gifted correspondent, "Old Judge," in "Some New Facts on Skunk" makes one statement which I think should not go unchallenged, and with which I take issue. He says: "It is a known fact that the skunk when lifted by the tail cannot throw his cologne," etc. Now, with all due deference to the "facts" and opinions as expressed by this gentleman, I can avow most positively that this misdoctored animal can throw his perfume about as readily under the tail as he can when mentioned. With your permission I will give you and your numerous readers a bit of my experience in this business. Some fifteen years ago, while a young man in

college in Brunswick, Maine, my landlord, Capt. Dresser, came to my room one morning with the thrilling announcement that an "essence pedler" had taken possession of his stable, and that he would like my assistance in either routing him out or capturing him dead or alive. My chum and class mate, Dr. Henry A. Dean, then of Foxboro', Mass., and I immediately repaired to the stables, where we discovered his mephitic highness snugly ensconced in the old gentleman's woodpile. Being of good size he was unable to entirely conceal himself within, and his caudal appendage remained hanging out, a most beautifully tempting opportunity for my experiment. Informing my companions of what I had heard or read, I boldly suspended the fellow by the tail, after a hard struggle to extract him from his hole, during which operation he made no sign of the devilry within him. When I first suspended him he happened to be back to me, but with a quick squirm he succeeded in putting himself face to face with me, when, woe! heavens and earth, what a fog. I remember distinctly that the atmosphere was rendered of a bluish cast by the abundance of the fellow's essence. I remember also that I dropped the soundend, and that he made good his escape, leaving only his card with me, but not till he had successfully ruined a nice, brand-new suit of clothes. The charge was, I think, quite evenly distributed from my chin to my toes, the pattern being excellent and the penetration amply sufficient for all purposes. Now should any one have any idea of ever acting upon the information so kindly volunteered by "Old Judge" I simply advise him to don a suit of cast-off clothing, or he will certainly have occasion to replenish his wardrobe. He should give him Mark Twain's advice, "Don't." MEDICUS.

Fish Culture.

ARE AQUATIC PLANTS DESIRABLE IN FISH PONDS?

COUNCIL BLUFFS, Iowa, Jan. 1880.

There is considerable question among pisciculturists, as to whether aquatic plants are desirable in fish ponds; and this is certainly not a one-sided question. It is contended, on the one hand, that they should not be admitted, as they furnish a lodgment for dead fish which thereby become concealed from observation and remain in the water until putrefaction takes place, thus fouling the water and subjecting the living fish to disease. Also, that they afford a shelter and concealment for the innumerable enemies of fish; and, again, that certain portions of the plants are continually breaking off and becoming decomposed, thereby fouling the water; that fragments drift against the outlet screens, causing them to become clogged. These are certainly potential arguments, such as the writer is free to admit have deterred him from making use of aquatic plants. Yet I am fully convinced after having given the matter full consideration, both *pro* and *con* and by experience, that every artificial pond should be supplied with aquatic plants.

It is a well known fact, that in feeding no matter how much care may be used, a large portion of the food from time to time becomes wasted by reaching the bottom, until in time there is such an accumulation as to render the ponds foul with the humic gas created by decomposition, which necessitates the frequent cleaning of ponds. This is known to all practical pisciculturists to be the most laborious and disagreeable work about an establishment; hence, anything that will prevent the necessity of drawing off and cleaning ponds should be most eagerly sought after. This, the writer claims, can be largely done by the use of aquatic plants. In this connection it will be proper to consider how and why fish are injured by foul ponds. In the respiration of fish as in that of other animals, the membrane of the gill organ (the lungs) absorbs the oxygen and gives out carbon. In the decomposition of both vegetable and animal matter, the fermentation and liberation of carbonic acid goes on with great rapidity. The oxygen and carbonic acid gas becomes mixed, whereby the oxygen becomes tainted (so to speak), and the fish are unable to obtain sufficient oxygen for the purpose of respiration. Now, it is a well known fact that the respiration of plants is the opposite of that of animals. That is to say, they take in carbonic acid and give out oxygen. Hence, if we have our ponds well planted with aquatic plants, they will absorb the carbon gas exhaled by the fish and given out by decomposition, as the same is taking place; thus, in a great measure, preventing the ponds from fouling. Almost any aquatic plant is good for this purpose, but more especially the simpler forms of *algæ*, such as *conferva*. In connection with aquatic plants, I would recommend having gasteropods (snails) especially the *finacea* and *planorbis* (pond snails). These will consume the vegetable matter continually given off by growing plants and the multitude of spores (seeds), particularly of *conferva*, which would otherwise soon fill the water. I should also recommend putting in the pond a few bottom-feeding fish, such as the *acipenser* (sturgeons). This would, in a great measure, prevent waste in feeding. By using aquatic plants in the manner above directed the writer believes that ponds would scarcely ever require cleaning, and that, perhaps, the occasional use of some harmless disinfectants by the owner would never be necessary. As to this I cannot now say, but I am about to make an experiment in this direction, the result of which I will make public in due course of time.

In addition to the benefit of keeping the ponds pure, aquatic plants are in a number of ways useful. They help to supply the fish with food, especially when young; afford them shade and shelter in case of cold weather; and against the rapacity of their comrades. Who has not noticed when a fish in the pond is in the least ailing that almost innumerable other fish will nibble away at him until the poor fellow expires, literally for want of rest? In cases of this kind the aquatic plant is a fine protection.

In conclusion, the writer will state he has two ponds exactly alike, containing water in the same quantity and of the same age. The one is considerably sheltered from the light and contains no aquatic plants; the other pond is open to the light and filled with plants and snails (*finacea*). In the latter the fish are fully double the size of those in the former. The fish are in perfect health and the pond has not been cleaned since last spring.

W. A. MYNSTER.

CALIFORNIA SALMON FOR THE MISSISSIPPI.—*Jacksonport, Ark., Jan. 30th.*—Editor *Forest and Stream*:—Over a year ago the writer, through *FOREST AND STREAM*, called attention to the fact that on the White River of Arkansas suitable quantities of the California salmon could be found several hundred miles nearer the gulf than on any other tributary of the Mississippi. Of course no opinion was ventured as to whether the waters of the Lower Mississippi could be safely passed by this fish, whether the temperature of the gulf was such as he could endure, or whether the food supply there would be found suitable and sufficient. The matter was, however, extended to an experiment. A short time since I was gratified to see in some of the Missouri papers an account of the planting of the larger part of 100,000 salmon in the waters of White River, they having been considered by the Fish Commissioners of the State more suitable than other waters of the State. This is a move in the right direction, but is a very small beginning. At least 500,000 young fish should be placed in the stream each year for five successive years before the experiment can be said to have been fairly tried. In view of the difficulties in the way and the magnitude of the enterprise this would not be too much. Success even at that rate would be cheap enough. Firmly believing as I do that it would not be impossible to stock Mississippi waters with the California salmon, I am anxious to see a systematic attempt made. Will *FOREST AND STREAM* advocate the question? SALMON ROE.

WISCONSIN.—*Madison, Feb. 2d.*—From an interview with President Dunning, of the Wisconsin Fish Commission, we learn that there will be ready for distribution in the spring, at the Madison hatchery, about one million brook trout fry, and that parties desiring them should immediately make application to any one of the members of the commission, or to the superintendent of the hatchery, stating in the order the number of fry desired and giving the name of the railroad station nearest to the point of delivery. The superintendent will forward the fry before the day of shipment, and they are expected to be prepared to receive the fry at the depot and transport them to their destination. The names and residences of the commissioners are as follows:—Philo Dunning, President; Madison; J. V. Jones, Vice-President; Oshkosh; C. L. Valentine, Secretary; Janesville; H. W. Welsher, Superintendent; Madison; Mark Douglass, Melrose; John F. Antisdale, Milwaukee; C. Hutchinson, Beethtown.

NEBRASKA.—The fish farm of Messrs. Romine & Decker, on the Platte River, two miles from South Bend, is described by a paper of that State:—Mr. Romine, some time ago, conceived the idea of hatching fish in the beautiful clear spring water, which flows from the high bluffs on his farm to the Platte River. He therefore procured some of the best spawn he could find, and, preparing at considerable cost a fine pond, placed them therein. Their healthy progress, and Mr. Romine's success in cultivating the finny race, are described in detail. The first time, and in short time, spawn was sent to Mr. Romine to be nursed under his care into fish. He then took in with him his present partner, Mr. Decker, a gentleman who had some knowledge of fish culture, and their joint efforts are as follows: They have now hatched 90 per cent of the 200,000 spawn received from the U. S. Fish Commissioner. This spawn was received in Oct., 1879, and they have since hatched 100,000 fry. These are now about 10,000 of which are living fish, swimming about, and are in good healthy condition. They have in their lower pond 1,000 two year old trout, which weigh about one and a half pounds. They have also in the second or middle pond about 10,000 yearling trout, which weigh about one pound, also 25,000 about eight months old, all in the finest healthy condition. The two beautiful springs of clear water, the constant circulation of the water, and the abundance of the food, the body of water at the main outlet being 27 cubic inches. In speaking with Messrs. Romine & Decker, we learn from them that their facilities are comparatively wasted, as they can accommodate and cultivate with care and success ten times the amount or number they now have, as the natural facilities they have at their place are not near utilized. A more beautiful place for the culture of fish than that of Romine & Decker, and we trust that our fish commissioners will do their best to have those fine natural advantages for fish culture fully taken advantage of. What is now wanted there is the spawn of the German carp fish, and such other fish as grow to a large size.

EARLY METHODS.—*Quincy, Ill.*—Editor *Forest and Stream*:—I have been much amused at the discussions in regard to inventions in fish culture and to see how many persons claim my inventions. I am a modest man, and do not often care to see my name in the newspapers, but as I regard *FOREST AND STREAM* in the light of a scientific record of fish culture, I am tempted to break silence. For the benefit of future historians of fish culture, I will say that in 1839 I took spaw by the dry method, which is now credited as a Russian discovery. In 1831 I used glass jars with wire bands coated with gas tar for hatching the eggs of the California salmon, and the following year I used the cones for hatching the grayling. I do not care particularly about pressing my claims to these inventions and merely state them in the cause of truth and correct history, as my work has ever been for the good of the people, and I have never cared to make it a merely personal matter nor to enter for cheap notoriety.

In a former number of your paper you gave a description of my fish ponds under the head of "A Successful Fish Culturist." That is true, I have been a most successful one, and I say it modestly, I have been a source of ideas to others in the business, which they have not always acknowledged. I have been pleased to see them employ a regiment of fishermen on Lake Superior in the earlier day when the country was wild, and once while camping in the woods alone wolves and owls kept me awake and in terror, and I thought I should be devoured every moment.

If I had been eaten up then some other man in some other country would have had to do the fish hatching. I have been making some experiments in crossing the

catfish with the fresh-water muscye, a thing which the men who are called scientists say can't be done, but I have done it. I am sorry that I have not got the young ones to show you, but they are in the Illinois River somewhere. SETH PEAKINS.

FOREST AND STREAM AT THE BERLIN EXPOSITION.—*United States Commission Fish and Fisheries*—Washington, D. C., Feb. 4th.—Editor *Forest and Stream*:—It is not unlikely that the U. S. Fish Commission may make an exhibition at the Berlin International Exhibition of what relates to the fishery industries of the United States, and it has occurred to me that possibly you might like to exhibit a bound file, complete from the beginning, of *FOREST AND STREAM*, as one of the journals indirectly connected with the progress of fish culture and fishing in America. The volume could be returned to America afterward, though it would be preferable to present them to a prominent person or library in Europe.

Yours truly, SPENCER F. BAIRD.

PRODUCTION AND CONSUMPTION OF FISH.—The following figures were quoted by Congressman Morton, of New York, in his speech advocating the appropriation of \$20,000 to enable the United States to be represented in the International Fisheries Exhibition at Berlin, 1884. The figures show the comparative production and consumption of fish by the leading nations of the world:—

	Annual Production.	Annual Consumption.
France.....	\$1,000,000	\$1,000,000
Italy.....	12,967,000	9,842,785
United States.....	8,288,000	8,274,000
Great Britain.....	1,000,000	1,000,000
Russia.....	6,765,000	6,765,000

The United States exported, in 1874, about \$2,200,000 worth.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, <i>Trachurus carolinus</i> .	Grouper, <i>Epinephelus nigritus</i> .
Flounder (two species), Family <i>Platichthys</i> .	Trout (large bass), <i>Centropomus</i> .
Scuppie, <i>Stenopus</i> .	<i>S. atrarius</i> .
Kingfish, <i>Mentidemus nebulosus</i> .	Striped bass, or Rockfish, <i>Hoculatus</i> .
Sea bream, <i>Archamia</i> .	Black drum, <i>Pogonias cromis</i> .
Sheepshead, <i>Archamia probatocephalus</i> .	Tautoglass, <i>Pomatomus saltatrix</i> .
	Black bass, <i>Micropterus salmoides</i> .

Red Snapper, *Lutjanus blackfooti*.

GAME AND FISH DIRECTORY.

In sending reports for the *FOREST AND STREAM* Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

THE CONNECTICUT LAKES.—*Second Lake, N. H., Feb.*—Winter very mild; no prospect of snow enough to assist in a moose slaughter, as many are inclined to say. Nature will beat legislation in their protection. I have obtained a specimen each of snowy hawk and scadian owls recently. The hotel at the outlet of Connecticut Lake has changed hands, and will be enlarged and repaired as well as the increasing prospect demands. It is now owned by the Conn. River Lumber Co.

EDW. NORTON.

VERMONT.—*Bennington, Feb. 6th.*—The trout fishing for next spring bids fair to be good. At the present writing all the streams are clear of ice. The brooks this winter have kept pretty high, which is a good sign here. The spawning beds last fall were covered with trout; I counted forty on one bed, the smallest of which would weigh half a pound. The season here opens the 1st of May, but as a general thing the water is not low enough for fishing until about the 15th. There is some very large trout here in the creeks and ponds. I have taken trout, with bait, of over two pounds weight, and have seen them caught even larger. The dye from the Bennington Woolen Mills is fast driving the trout from the Main Branch, and there does not seem to be enough interest in the fishing to have it stopped.

G. F. O.

MASSACHUSETTS.—*New Bedford, Feb. 4th.*—The remarkably mild weather up to the 1st of February has enabled the fishermen from this vicinity to take large fares of cod and tautog on the ledges at the mouth of Buzzards Bay and off of Westport. Two men in one day last week caught one thousand (1,000) pounds of these fish on Brown's ledge. Owing to the same cause, mild weather and want of ice, the eel fishery has been proportionately light. Smelts and a few herrings have appeared.

COSHA.

ANGEL PRIZES.—*Chatham Village, Columbia Co., N. Y., Feb. 6th.*—The annual meeting of our little club for the election of officers and the awarding of prizes took place on Monday evening, Feb. 2d. I. R. Burrows was chosen President for the ensuing year; C. D. Hink, Secretary and Treasurer; O. M. Whyland, A. J. Fellows and W. M. K. Burrows, Weigh Masters.

The prizes offered last season were three fly hooks (Russia leather), for the three heaviest bass taken within a radius of seventy miles of the village. They were awarded to A. J. Fellows, O. M. Whyland and C. D. Hink. The ceremony was of the simplest possible character. There were no speeches, inasmuch as the gentlemen all protested that they were better at fishing than speech-making, and for proof, pointed to their record. Therefore, Mr. Fellows, who caught the largest bass (three pounds, six ounces), just walked to the deck and took the first choice, Mr. Whyland the second, which, of course, deprived the third man of a choice, though not of a book.

The prizes put up for the coming season consist of a bamboo telescope rod, donated to the club by our new president, and a waterproof braided silk line.

It was estimated that over 100 pounds of trout had been taken by the club during the last season out of streams in this vicinity; and it was resolved that some evening in the coming season a trout supper be indulged in by the members and their wives, the trout to be furnished by the club from their own hooks and lines. Already the most zealous members are polishing their green-hearts, and inspecting their braided silks, snells and flies in anticipation of the event.

HIX, J.

A SPORTSMAN'S TENT.

[The metric notation in the following article may not be familiar to all our readers. We therefore give the equivalents in feet and inches:—1 meter, 32.57 inches; 1 decimeter, 3.937 inches; 1 centimeter, .3937 inch; 1 millimeter, .0394 inch; 1 kilogram, 2.206 pounds; 1 gramme, .1543 grains; 1 litre, 1.057 quart.]

SIX years having proved the usefulness of this tent under greatly varying conditions, this account is written, as it may be of use to some who, wandering in their vacations among the mountains far from shelter, find the need of protection from changes in temperature, rain and insects.

In making a tent for exploration several objects were kept in mind:—First, it must be light; second, it must be waterproof; third, well ventilated, else half the benefit of a sojourn among the hills will be lost; fourth, it must afford protection from insects, or in warm climates from reptiles; fifth, the method of pitching should be simple, as on a march it is often desirable to avoid a sudden shower. The tent to be described has met these requirements:—Weight, 8 kilograms.

In shape the tent (Fig. 1) is a cone, the height about 2 metres; the diameter of the base, when set up, is 250 centimetres. Fig. 1 shows it hung from a branch.

Many times in a forest country this method can be used, or if a branch cannot be found then a simple way is to fasten to a pole tied between two trees about 3 metres apart. In a treeless region it is advisable to have three bamboo poles, each 8 metres long, jointed in two places like a fish rod.

The butt of each pole should be provided with a pointed steel rod 5 centimetres long and 4 millimetres in diameter.

When the tent is to be pitched these poles are brought together and tied in the form of a tripod, the tent being hung from the point.

The tent (Fig. 1) is made of nine equal segments of Pecor unbleached cotton sheeting, which is to be shrunk before being used. How to cut the segments with least waste is shown in Fig. 2; A B C D is one segment. All the figures were drawn to scale, but in making the photo-lithographs care enough was not taken, therefore all the important measurements will be given. Each segment is to be cut out 10 centimetres wide at the top, Fig. 1, A to B, and 94 centimetres wide at the bottom, Fig. 1, C to D. The length is 40 centimetres. As 2 centimetres are in all cases allowed for seams and hems, all these dimensions in the finished tent are reduced 4 centimetres.

To form the doorway one seam remains unsewed for a distance of 130 centimetres from the lower edge of the tent.

Over this opening is sewed the weather-flap, Fig. 1, D, G. This is of the same material as the remainder of the tent. It is 111 metres wide and 160 centimetres long, after being sewed to the tent and hemmed at the bottom. Sew it on 140 centimetres from the lower edge of the tent.

This weather-flap is placed in front of the always-open door as a protection from rain and sun.

It is stretched over a horizontal pole supported by the forked stakes, as shown in Fig. 1.

It extends to within a few centimetres of the ground, and is held to the upright forked stakes by pieces of tape 10 centimetres long, sewed to each lower corner.

Fig. 6 shows the inside of the tent at the doorway. The observer is supposed to be in the tent and looking out. The dotted lines represent the sides of the doorway, turned back outside. Over the triangular space thus left is a piece of fine muslin, too close for midges to get through. This is represented in diagram by the crossed lines. It is made strong by a binding of cotton cloth, 2 centimetres wide. This binding is sewed to the tent along the upper and left hand edges (Fig. 6, D, E, F). The bottom and right hand edge are free, the latter being provided with stud-holes, through which pass brass shirt-studs, the heads of which are seen in Fig. 6, at A, A, A, A, A. When in use the muslin door is buttoned between two narrow bands of cloth, sewed to the tent at the right hand side of the doorway. In Fig. 6 the inner of these folds is, for a short distance from the bottom, turned back to show how the muslin door is buttoned.

The tent is fastened to the ground by steel pins, passing through loops sewed to the tent.

These are shown at J, J, J, Fig. 1, and the loops more plainly in Fig. 4.

The loops are ten in number, made by doubling pieces of linen tape, 3 centimetres broad and 28 centimetres long.

A loop is to be sewed to each of the eight closed seams of the tent. The other two are to be sewed, one on each side of the open seam forming the doorway. Sew each one on with a double row of stitches, beginning 10 centimetres from the bottom of the tent and extending up each side the tent seams for 10 centimetres.

The object of sewing on the loops 10 centimetres from the bottom is that when the tent is pitched, the bottom for 10 centimetres is turned in and lies flat upon the ground; so that by covering this with fir boughs or moss there can be no open space between the tent and ground for insects or reptiles to enter through.

Fig. 1, K, K, K, represents strips of linen tape 20 centimetres long and 2 centimetres wide. To each of the nine seams in the tent body one of these strips.

The sewing should begin 3 centimetres below the top of the tent body, and extend as a double row of stitches down each side of each seam for a distance of 8 centimetres. Three centimetres are left unsewed at the top, because the muslin cap, yet to be described, is tucked in between the linen strips and the top of the tent body. The upper ends of these strips are looped over the rings, shown in Fig. 5, and sewed through the hole in the center of the bar bisecting the ring (Fig. 5) passes the suspension cord (Fig. 1, B). The ring is 5 centimetres in diameter.

It is made of brass wire, 4 millimetres in diameter.

Only the caps (Fig. 1, C) now require description. There are two of these, though only the outer one is shown in Fig. 1.

This is of cotton, like the tent body. The inner one is of muslin, like the door.

The dimensions are the same. They are cones, 30 centimetres high and a diameter at the base of 24 centimetres.

The apex is perforated for the passage of a suspending cord (Fig. 1, B).

Fig. 1, A, represents a disc of rubber 4 centimetres in

diameter, which fitting to the suspending cord prevents water from entering the tent at the apex.

The outside cap is turned up as in the figure, answering two purposes:—First, to prevent rain from entering; second, to create a draft by deflecting the wind. The inside or muslin cap is tucked under the upper edge of the tent-body, between it and the suspending strips, K K K, Fig. 1, serving in connection with the muslin door as a perfect protection against insects, yet allowing of good ventilation. As these are the important features of the tent, attention is called to them.

The tent pins, Fig. 3, are pointed rods of steel, heavily coated with zinc. They are ten in number. Length, 25 centimetres; diameter, 4 millimetres.

Two of these are permanently fastened together by being tied one at each end of a piece of linen cord, which when drawn straight separates the pins by a distance equal to one-half the diameter of the base of the tent when pitched.

Two others are fastened in the same way, the distance between them being equal to the distance between the loops J, J, Fig. 1.

After the tent is made, before sewing on the muslin door and adjusting the muslin cap, dip it into the following fluid to render it waterproof: Naphtha, 8 litres; paraffine wax, 1 kilogramme; cosmoline, 50 grammes. Dissolve the paraffine and cosmoline in the naphtha by heating to about 37 centigrade.

As a considerable time is required for solution, keep the mixture in a large bottle until ready for use; then pour

into a proper vessel, and dip the tent into it. After removing wring out the fluid, hanging up the tent in the sun, or if in winter, iron in the mixture with a sad-iron, after the naphtha has evaporated. If desirable, dip the tent again; the amount of fluid given will allow of this.

After sewing on the muslin door and adjusting the muslin cap, the tent will be complete.

To pitch the tent:—Push one of the tent pins into the ground in the centre of the spot chosen for the tent, then with the other, which is attached by the cord, mark a circle on the ground. If the pins are fastened at a proper distance, the circle will have the same diameter as the base of the tent.

Now with the other two pins, which were fastened by the shorter cord, mark on the circle the points where the tent pins are to go. Then pass a pin through a loop and push it into the ground. Do this with the remaining nine pins and nine loops. Now by pulling on the suspending cord, which has been thrown over a branch, the tent will rise into form. After fastening the cord, turn in the lower edge of the tent ten centimetres, laying it flat upon the ground. The object of this, as mentioned before, is to make the junction with the ground as tight as possible, to prevent reptiles and insects from entering.

After placing the weather flap, Fig. 1, B, in position, the tent is ready.

Before going to bed, cut a piece of thick bark, making a smudge on it. Place in the tent; close the cotton door; after a minute draw down the cap. After five minutes take out the smudge, throw back the cotton door, draw the muslin door across the opening, lift up the cotton cap, draw down and tuck in the muslin cap. Enter the tent before all the smoke has escaped, adjust the weather flap, button the muslin door, crawl into a blanket and sleep without being annoyed by insects, or dreaming of finding a rattlesnake or a scorpion in your blanket.

WILLIAM HERBERT ROLLINS.

Boston, Dec. 20th, 1879.

A TEMPORARY SHANTY.—Toronto, Feb. 2d.—Select two trees, ten feet apart. Between them and at a height of eight feet nail a three-inch pole to form a ridge, and then on either side slope light poles, driving one end into the ground and nailing the other to the ridge-pole at a spread of eight feet. Cover these with pine or cedar bark, which is easily procurable off dead or fallen trees, taking care to lap the edges of the bark so as to throw off water. A light coat of pine tar and a second layer of bark will give additional security. Bind the whole with light saplings. The ends can be made by driving in small uprights and weaving between them pine tops, leaving at one end an opening to serve as a door. The above may not have much "solid comfort," but it will answer the purpose, can be run up in a few hours, and is no loss to leave behind.

BASS FISHING AT CHARLESTON LAKE.

NEW YORK, Feb. 6th.

I wish to introduce to the lovers of fly-fishing a lake which has never to my knowledge been mentioned in the columns of *Forest and Stream*. It is in the Province of Ontario, Canada, and about as secluded from civilization as any sportsman could desire. Charleston Lake, the body of water I speak of, may be reached in two ways. One by going from New York to Clayton, St. Lawrence County, N. Y., and rowing up the Gananoque River from the town of that name through the "Drowned Lands." This necessitates two carries and a thirty-mile row before reaching the lake. A second and easier way, though far less agreeable to a lover of scenic effect and the woods in all their wildness, is to go to the small village of Rockport, on the Canada side of the St. Lawrence, about opposite Alexandria Bay, and drive from there to the foot of the lake, twenty miles. He who does not care for bass fishing need not go. That is the only fish the lake contains. If I except some few pickerel and numerous lake trout which can only be caught by trolling with heavy sinkers, one to two hundred feet below the surface—a *modus operandi* which most fishermen will concur in pronouncing with me no sport. But for bass Charleston Lake is the place par excellence. Should you be a novice at casting you may troll with a heavy rod and a gang of flies and have sport enough. Leave all your wily lures and hooks and use a large red or white fly, as these will take nine-tenths of all the fish caught.

But to the expert who can cast well his fly it is simply perfection. What a sensation it is! You stand up in your boat awaiting a favorable place to cast. Your boatman pulls slowly and evenly around a rocky shoal. One skillful turn of the wrist, your line flies out, and seemingly before your fly has touched the water there is a rush, a flash, and your nerves tingle with the shock on your seven-ounce rod as your line whizzes from the reel. Gradually the rush ceases and you commence to reel in. Now is the time to bring all your skill into play—a single slip, a slackening of the line, and your fish is gone. Slowly you bring him along, and nearer and nearer he approaches the net which your boatman keeps in readiness by his side; but he sees the boat, and with renewed strength is off again. You were taken by surprise. Your line slackens a little, and your fish jumping from the water shakes the hook from his mouth and is lost. You are disappointed now, but better luck next time. Another bass is hooked; but to your surprise he comes in without a struggle. Faugh! It is a rock-bass, and you throw him away, recognizing at once one of the speck. But now you have better luck, and after another struggle your fish lies gasping in the net, a perfect type of a gummy bass cold and hick like the water he has just involuntarily left.

Such is the sport as I found it at Charleston Lake; and as this lake is not well known either to Americans or Canadians, the bass are in great numbers. A one-pound bass here will give as much sport and slow as much fight as a fish of twice his weight in the St. Lawrence. Another peculiarity of these fish is the fact, verified by personal experience, that the bass in this lake seem to go on and off the shoals periodically; so it happens sometimes that one may have good fishing one week and poor the next. On our last trip to this place the fish did not rise well to a cast; they were on the shoals, and most of those taken were caught by those who trolled with a long line. Ordinarily, however, when you find them on the rocky shoals and on the edge of weed-beds they will rise well; later in the season they seek the deep water when it is almost impossible to take them.

If any of our readers of this journal have a week to spare let them go up to this lake in July for the best fishing, and in September for the best shooting and fishing combined. The "Drowned Lands" through which they will pass they will find black with ducks, and the grouse around the lake are very plentiful, though hard to get at. A congenial party prepared to rough it need not fear any lack of fun. You can stay at the hotel (by courtesy) for \$8 each per week, or you can camp out either on the main land or on some one of the numerous islands. In neither place will you be bothered by flies or mosquitoes. Our party averaged last season twelve-five bass a day per week. We caught the fish under three-quarters of a pound, and fishing only in the early mornings and afternoons.

If any party would like to try their luck at Charleston next summer my advice would be to go direct to Clayton by the New York Central Railroad, and hiring men with their boats on the river to row up the Gananoque River to the lake, and camp out. All the boatmen are good cooks and can make a camp with anybody. No one who takes this trip will ever regret it. The fine scenery, the good fishing, and the pleasure of camping out, tend to make a visit pay better than most places. As far as I know, but two other parties besides ours ever visit the lake, and this is in itself a recommendation. About the shooting one must deposit at the Custom-House on entering Canada a sufficient sum to cover the duty, which money he will receive back on leaving Canadian territory. This is a rule applying to fire-arms of all descriptions. I cannot speak from personal experience about the fall shooting, but while at the lake during the month of July we saw many grouse and even some geese. From the appearance of the country and the abundance of wild rice and food of all kinds, it must be as the guides declare—a fine place for ducks. At any rate, the fishing will well repay any parties who may perchance wish to make a nice trip irrespective of roughing it.

NEW PUBLICATIONS.

THE NUTTALL BULLETIN.—The opening number of volume five of the *Bulletin* of the Nuttall Ornithological Club comes to us on the 1st of January with very attractive contents, and we welcome it as warmly as ever. It would be difficult for any one who has not watched with care the rapidly with which the love for that delightful science, of which the *Bulletin* is the recognized representative in this country, has spread among the people, to appreciate how great a work this publication has done for science during its short life. The constantly increasing number of ornithologists throughout the length and breadth of the land, and the vastly improved character of the work which they do, bear witness to its usefulness.

The present number opens with a delightful article by Mr. Brewster, on the Habits and Distribution of the Philadelphia Vireo (*Vireo philadelphicus*), which is followed by an interesting sketch by Mr. Hickenlo, entitled Remarks on the Nidification of *Loxia curvirostris*, with a Description of its Nest and Eggs. Our frequent correspondents, Messrs. T. S. Roberts and F. Hemen, present a Contribution to the Ornithology of Minnesota, in the shape of a list of eighty-six species of birds observed in the counties of Grant and Traverse of that State. Among the birds noted were three not previously reported from that State, viz: *Petrochelidon ornata*, *Empidonax bicolor* and *Tyrannus verticalis*. Dr. Cooper, as the Recorder of the State of *Empidonax acadicus* and *Empidonax traillii* is of great interest.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 12, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for deletion of mail service if money remitted to us is lost.

Trade supplied by American News Company.

Send for Circular of Premiums offered by the Forest and Stream Publishing Company.

EDITORIAL NOTES.—We will have a heavy snow-fall next Monday, at least that is what Mr. Henry G. Vennor, of the Canadian Geological Survey, says; and when Mr. Vennor says that it will snow it generally snows. As long ago as Jan. 23d he said, and published the prediction, that it would snow on Feb. 2d or Feb. 3d. It did. Besides the snow storm next Monday, Mr. Vennor predicts others on March 17th and 21st.

Mr. F. A. Ober, "Fred Beverly," returns to Martinique this month to pursue his ornithological labors and to gain the necessary materials for a work on the birds of the Lesser Antilles.

A notable feat of mountain climbing has been successfully performed by three adventurous travelers, who last month ascended to the summit of Mount Chimborazo. This lofty peak of Ecuador ranks as the sixth in elevation of the Andes. Its snow-covered top towers 21,442 feet above the sea, and is seen two hundred miles from the coast. The ascent of this vast dome is attended with hardships and obstacles which have hitherto baffled the determined attempts of the most daring explorers. In 1802 Humboldt and his companions, after the most arduous exertion, arrived within 2,000 feet of the summit—a point then believed to be the highest point ever attained by man. In 1831 another attempt was made, the party then reaching an elevation of 19,695 feet. When we went to school we were taught that Chimborazo was a volcano; but the party who went up to the summit last month report that no crater exists, nor are there any evidences to be discovered to indicate that the mountain is of volcanic origin.

PACIFIC COAST LOGIC.—An esteemed California contemporary has ingeniously accounted for the salmon sickness noted by our correspondents as occurring among the dogs of the Pacific slope. The explanation of the phenomenon consists in denying its existence. Besides being eminently scientific, such an elucidation is valuable because it cures the dogs. We trust that our amiable friend may not allow his candle to burn away unseen in a dog kennel. There are very many perplexing questions which the world is waiting to have solved. If, for instance, this California logic can cope successfully with the baffling problems of the yellow fever germs and can restore the victims of that dread disease by simply denying the existence of the scourge, surely its genius should not be thrown away to the salmon-sick dogs of Oregon.

THE UNITED STATES AT THE BERLIN EXHIBITION.

PROFESSOR Spencer F. Baird writes that the bill providing for the representation of the United States at the coming German Fishery Exhibition, having already passed the House, bids fair to go safely through the Senate as well; and in that event the necessary preparations will be immediately entered upon for insuring such a satisfactory display of our fishing industries as the limited time will permit. That the United States is to be represented is a subject of congratulation. We have already published in detail the prospectus issued by the promoters of this enterprise, which includes: (1) aquatic animals, alive, stuffed, preserved in alcohol, or represented in pictures, casts, etc.; (2) fishing gear and implements; (3) pisciculture, hatching apparatus, models of well known breeding institutions, fish-ways, aquaria and illustrations of the development of some of the most important species, such as oysters, salmon, etc.; (4) appliances for keeping and conveying freshly caught aquatic animals; (5) models of appliances in use for the preparation and preservation of the produce of fisheries for commercial and household purposes; (6) models of fishermen's dwellings and costumes; (7) scientific investigations regarding the stock of fish, physico-chemical researches, aquatic plants in relation to fish culture, herbaria, etc.; (8) history of implements of fishing, original or in reproduction from the oldest times downward; and (9) literature, statistics of fisheries, and maps showing geographical distribution of fish.

From this brief resume it will be seen that the Berlin Exhibition will be a gathering of all that can be useful in extending our knowledge of the present condition of the fishing industries of the world. The display there made, and the comparisons instituted, cannot fail of resulting in direct increase of knowledge and a consequent advance in the science and methods of fish culture and fish capture. We need not argue at this day concerning the commercial and industrial importance of international fairs and exhibitions, nor need we urge American fishermen to improve the opportunity at Berlin, next April, of comparing American methods with the most advanced appliances and practices of foreign nations.

DOSING DOGS.

IT is an almost universally acknowledged fact that a far greater number of our canine friends come to their death by physic than by the vicissitudes of the field and flood, or than those that pass away in a ripe old age with their heads upon the hearth rug. Right well in the present sporting decade is Macbeth's utterance obeyed: "Throw physic to the dogs," though it is true in this progressive age the *materia medica* of dog-doctoring has made a grand stride, and tin filings and powdered glass have had to give way to areca nut and the flowery koussou. Because a dog looks at the end of his tail it is no reason that he is afflicted with worms, or that his innermost parts should be converted into an apothecary shop. The fond master buttonholes his veterinary friend in the street to tell him that he has just given his dog Dan a pill. He smiles most blissfully, as if he had performed some feat similar to making a double shot. He left Dan much better—the dog was in perfect health. On his return home Dan, having become restless from internal rumblings, wanders about in a listless way until a fly or some crawling insect tickles his ear. He shakes his head to drive the provoker away, which assures his good master that his favorite is a victim to canker. Vile concoctions are at once squirted into his brain, and new nostrums poured down his gullet. Rendered ten times more restless, the dog totters around in his canker-cap like some old woman at a fair. It now occurs to the doting owner that he has not yet felt the dog's pulse; this is done, because the master feels reassured. A brace of fleas now put in an appearance, and Dan tries to remove them with his claws; it is then apparent that canker is not the evil, but mange. The cap is removed, and the dog, delighted to regain the freedom of his ears, flaps them to his heart's content. This action causes serious indecision in the mind of his master, but at last mange gets the uppermost, and mixtures and decoctions are plastered over the animal's coat, the dog being fortunate if all his hair is not clipped off and his skin sand-papered to kill the parasites that lie hidden there. Frequently the animal has to endure an attack with patented appliances, directed somewhat after the manner of Munchausen's bear. When at last sleep falls upon the tired victim his twitchings are taken for chorea, snorings for lung disease, while his anxious master groans and is at his wit's end. Thus this illustrates the fondness of man for his dog and the iron constitution of the animal.

The great secret, however, to prevent the real sickness of dogs is early and constant care. The kennel in which they are housed should be kept scrupulously clean. We believe, for sanitary purposes, that all kennels should be built of wood, so that if any infectious disease should at any time attack the stock they can be burned to the ground and new kennels rebuilt in their place at but

trifling expense. It is a well-known fact that kennels, and even hospitals for the matter of that, become impregnated with the germs of disease, and the contagion, under certain conditions, is sure to crop out at some future period.

As it is the flooring that becomes the most damp and foul, and is so difficult to keep dry and pure, it occurs to us that all kennels should be raised from the ground a sufficient distance to let the air have full sweep under them. The floor then being made movable, could be arranged to work on a center pivot at each end, thus enabling it to be reversed daily, and when in position to be secured by a bar or bolt. This would always present a dry floor every twelve hours, while the soiled side could be washed and left to dry and sweeten in the air.

Food of the proper quality and quantity is fully as necessary as cleanliness, and should depend upon the breed and temperament of the animals, and whether they are being worked hard, or laying by during the close season. A dog requires more meat when he is being shot over than when he is only being exercised, and at all times the Indian mush should contain vegetable stuff and greens. Water for dogs cannot be too pure, cool and fresh, and the best kennels are those which are supplied by a running stream. If anything, pure water is more desirable than fresh food.

Thus, under the above systematized arrangement, should a dog be taken sick the kennel-man will discover the change at once, and often as readily be enabled to trace the sickness to its cause. It is delay, ignorance and the abuse of medicine that causes the direful diseases of which so much has been written. There are but few disorders which if taken at once in hand, and by the exercise of proper judgment, cannot be nipped in the bud. It is the mania for dog-dosing, procrastination in attending the dog when the disorder first makes its appearance, which proves fatal and causes our duty to be such a difficult and so thankless one. Rarely is it that our advice is called upon until all experiments have failed at home; and although then we are but imperfectly informed, we are expected to prescribe a treatment which will in all cases cure, there being but little margin left for the sweep of death's scythe. Unfortunately for the many, we are not clairvoyants, nor possessed with the secret of the grand elixir, or with the healing salve of the great Bakhtyar Naneh—would that we were, that we might distribute broadcast our samples free.

Like the diseases of human beings, those of dogs require a treatment which must be governed by each individual case, as there is no specific to cover each distinct ailment. If, therefore, our friends will remember this, and carefully describe the symptoms of their dog's disorder on its first appearance, we will be enabled to administer more thorough advice, and will at once give each case our careful attention. To enable us to proceed in the Field Department of this paper in a comprehensive way, we have arranged to furnish a report on specimens. They should be forwarded to the Columbia Veterinary College, No. 217 East Thirty-Fourth street, this city, and in all cases the express charges must be pre-paid. This arrangement will admit of our treating diseases of an epidemic character in the most direct way, which may lead to the saving of many valuable animals of the same kennel.

MAKING THE ROUNDS.

WHY should we not, just as well as our cousins across the water? What is to hinder our racing neu from deriving all the benefits, advantages and experiences of a regular series of "rounds" along our coast during the breezy months of spring and fall, and from cruising, as at present, during the heated term when most men can spare a lengthy period or vacation to an extended voyage and life aboard their yachts? Racing among the larger vessels in the American fleet has become almost obsolete, and but little of it is done in New York waters. A little more liberality in ideas and a few concessions exacted from the close corporation system, now the fashion, will serve immeasurably the public ends of yacht racing, put much life into the sport, and above all make it worth while for the ardent lovers of a match to keep their clips in trim for such work, if necessary, from the day they ship their hands to the day they haul down their fighting colors and lay by for the icy interregnum of the fierce winter's blasts. A little amicable co-operation on the part of leading members among the larger clubs would change the aspect of affairs totally. From an occasional desultory club race, calling out but a meager list of representatives, we could and ought to have a regular series of "fixtures," so framed with regard to date and entries that an owner could count on racing his vessel not once or twice a season, but a score of times if he feels inclined, thereby footing up his "totals" for the year to something he can look back upon with pleasure and satisfaction.

To this end three things are necessary. Matches should be open to all yachts of certain designated clubs supposed to be the peers in the community of the club offering prizes. The latter should represent purses or cups of a value proportionate to the expenses and trouble involved

in coming to the line, and finally the dates of races should be harmoniously settled in order that owners may take advantage of the opportunities offered. To this we may add a fourth requisite, the offering of "town" or "citizens," cups by the municipalities or by voluntary subscription among the residents of those ports whose trade and society will be enriched by the congregation of yachts at a public match would induce.

In a modest way something of this sort has already been attempted from time to time, and the results have always been so satisfactory that we hope to see a similar line of policy pursued after a more permanent and definite as well as enlarged fashion. When once the ball is set in motion it will keep rolling of itself. One season such as we here propose, would put racing among our craft of large tonnage on so sound a basis that we would hear no more sorrowful wails about its decline. It is not that the spirit of racing is absent, but simply because the opportunities are wanting and the direction in which to operate not understood that an apparent pall of apathy has overtaken the racing of the big ones.

There is nothing in the Constitution which forbids cities from offering ample purses when the general public is thereby to be benefited. Such offers are not merely for the welfare of a class, but would serve in many instances to stir the life blood of trade in sundry sleepy towns along the coast to an unwonted extent, and put shiekles into the tradesmen's pockets. Besides, we have plenty of precedences of the kind and similar appropriations have been made time and again for like purposes, often enough without as much gain to the community as the presence of a fleet of yachts and the attendant crowd of visitors would produce. The tender official consciences of mayors and city administrations can therefore vote public regattas without the least compunction as to a sacrifice of their chances in the next world, and since the benefits in this are evident enough or could be readily made so, we ask the various municipalities along the Sound and "down East" to consider these lines in the light of an open letter addressed to them for the benefit of the interests they are especially charged with. A thousand dollars out of the strong box of Port Jefferson, Greenport, Stonington, Saybrook, Salem, Duxbury, Portsmouth, and double the amount from the coffers of New Haven, New London, Newport, New Bedford, and Portland, with five thousand from Philadelphia, New York, and Boston, would not only give yachting such an impetus and fresh lease of life as it has never yet had, but would return many times the amounts named to the credit side of the public ledger in the way of trade and popularity, reaching all classes, from the huckster to the mayor who may keep a livery stable or be a bank president. There is a mine to be worked in this direction, and the port which takes its cue from these columns will be the first to reap the harvest of stray coins which are the proverbial accompaniment of the yachtsman, and many a fair one will be induced to impart her luster to a community the very existence of which was a geographical uncertainty before its name became linked with the fame of a great yacht match.

If, then, the leading clubs join hands, what is there to interfere with the establishment of a regular round from New York to the East, and from the East to New York?

With the Seawanhauks starting the ball with an open Corinthian match, say in early June, the Atlantic following in a week, next the Brooklyn, if that club is to be revived, as we hope it will, the New York Y. C. toward the latter part of the month, the professional races of the Seawanhauks following in rapid succession: let the fleets then begin to gradually work their way to the eastward, whether in squadron on a cruise or with a roving commission, and pick up what there is in the way of town cups and citizens' prizes. All the above races, it must be noted, should, in accord with the programme proposed, be open to yacht clubs willing to recognize each other as brethren of the same color, and the entry should by no means be confined to the half-dozen likely racers of any one club.

In the East the same tactics should be pursued. The Portland, the Eastern, the Boston, the Salem, the Dorchester and other clubs, can throw open their lists to all comers, and arrange dates to suit. When the local matches have been decided, they will make their way around the dreaded Cape and take in the municipal events that may offer at the Vineyard, New Bedford, etc., and be on hand in time for the grand affair of the season, a series of three or four days' racing off Newport, the watering place of America, and which by popular selection should become the Cowes of this Continent. There, in the month of August, might be found the very flower of all the great clubs, the sloops, schooners and steamers, and a finer pageant than the races they would sail could not be brought about in any other quarter of the globe.

When the battle is over, when yachts of Eastern build shall have pitted their keels and lead against the skimming hulls of our smooth-water flyers, and the lockers of the best shall groan with the weight of cups and mementoes of the season, or the bank books of the fleetest be swelled by the thousands, then let the swallows of the summer be homeward bound again, the flyers from the East hoist their pennants for the outside voyage, those

of the West watch a chance for a smooth sea and a fair wind to wait them once more through the Fisher Straits into the placid waters of the more congenial Sound. On the return passage fall racing should be found at such ports which have postponed their dates so as not to clash with other events, and finally a series of matches at home would wind up a season that has been spent to some advantage, that has brought all yachts of the country together to test their metal, that will pass into history and form a topic long to be cherished and remembered. Ah! that would be yacht racing indeed!

Business interferes? Not a bit of it; on the contrary, no means could be found by which the business hours of the business man would be taxed so little as by this systematic method of racing. As nearly all the yachts referred to carry paid hands, and many of them are quite liberally supplied with this article, why let the yachts lay idly at anchor week after week with the hands growing sleek off the cabin pantry? The oftener the owner is on board the better, but it is seldom that his presence is really necessary in a match—some are in the way—and as long as he has to foot the bills, let him get the equivalent from his craft by sending her the rounds of the racing ports in charge of her master, or a friend, and join her by rail, or steamer whenever he has a chance to quit Exchange and feels like getting a whiff of the Lord's free air once more and the sight of a horizon not bounded by brick. The Sound and the East are accessible alike, and the time consumed in getting in and out of harbor when at home might as well be spent on the cars or a steamer carrying the owner within hailing distance of his ship, the trip being made by night with "all the modern conveniences," if time be precious.

As to expense, when once fitted for racing, as all yachts which indulge in a match only once a year generally are, beyond the hiring of extra hands for a match, it amounts to little or nothing. A slight saving in Piper Heidsieck will cover the bill, and what genuine yachtsman will begrudge his gear its needs while living high down below?

When the interests of the sport have grown and developed on the Lakes, a similar series of "rounds" may be instituted to serve like ends upon the great fresh waters of the inland districts.

It is pleasing to know that as long as we cannot have the whole programme, there is some chance of several clubs combining to meet during the summer, with a view to racing in a manner similar, to all intents and purposes, to "open" matches; and that the efforts of those interested may be the means of rousing the dormant spirit and waking up all hands to the opportunities now passed by is the wish of every good and loyal tar.

Let us once have racing carried on in a business-like way, and we warrant a heavier crew of seamen among bankers, lawyers, brokers and merchants, and a sounder lot of yachts in our fleet in a single year than we now turn out in a decade. We are tending in the right direction as it is, and are bound in the end to bring up just as indicated above; so we trust these remarks may do something toward hastening the day when the picnic features of racing and the shriveling isolation of clubs, now all drawn up and petrifying in their own shells, will give way to something akin to what all devotees of the sport would rejoice to see—racing carried on upon a broad national basis, not upon the vacillating hobbies and caprices of a set, a clique, a club.

THE CORRUPTION OF SPORT.

FOR some weeks past there has been a famous battle of brains in Gotham. The champions of the chess board have found worthy antagonists, and the mimic war of white and red waged ruthlessly, while the chess world stood with suspended breath looking over the shoulders of the combatants. And now that it is all over, and the "championships" duly awarded, it has leaked out that there were unseen agencies presiding over the destinies of the heroes, and upon the battle-field moved potent agents as noiseless and as unsuspected as the gods upon the battle plain of Troy. The American Bird of Freedom, as she appears in conquering pose upon the coin of the realm, screamed harshly and effectively in the strife, and the Goddess of Liberty in gold proved a formidable antagonist of the Queens in red and white ivory.

This evidence of foul play in an intellectual game, which from its very nature is supposed to be "above board," has naturally shocked that portion of the public which had not already wisely concluded that such a denouement would naturally follow the conclusion of the chess tournament.

America, our college professors tell us, is in her money-making stage; and it takes a less astute individual than the ordinary university professor of Political Economy to see that the average American citizen is—to employ a very slang but a very significant expression—"on the make." The mighty dollar is the controlling agency in every branch of social and public life. Possibly this generalization may sufficiently account for the mercenary element of so many forms of alleged sport. Generous emulation in physical strength or skill gives place to sordid clutching after purses, gate money, entrance fee or

prize—provided this last be convertible into cash. We are not now necessarily referring to the notorious pedestrian hippodromes, nor to ring encounters. We have in mind more than one shooting club whose weekly meetings are only so many gambling schemes among a clique for the gathering in of the purses and entrance fees. By a preconceived understanding this ring manages to secure to its members the various money classes, and so divides the stakes. The confiding stranger who has come to pit his skill against theirs is unmercifully and remorselessly fleeced and packed off for the simple gull that he is. And yet these very trap-shooting pot-hunters will affect to regard with virtuous indignation the recognized pot-hunter who shoots game for the market. If there be a distinction between the two, we submit that it is a distinction without much, if any, difference. One shoots for the money directly; the other, for that which will bring him money. The same style of proceedings not unfrequently occur in rifle shooting. The history of American yacht racing contains some most disreputable records of a similar dishonorable and unsportsmanlike character. Base-ball has long since been unhappily relegated to the control of the ticket and pool seller, and a sport which possesses many merits as a popular, inexpensive and practical pastime thereby sadly cast into disfavor.

With the constantly recurring examples of this mercenary feature of participation in sport, true devotees of sport for the sport's sake need not be warned against implicating themselves even in the appearance of evil. Our popular pastimes are too important in their hygienic influences alone to be cast into a disrepute which will bar gentlemen from engaging in them and reaping their benefits. We note with great pleasure and as a welcome sign of the times that some of our gun clubs have abolished money prizes in their regular club matches. If members are inclined to contend for purses, they are not debarred from so doing; that is their matter. But when the club shoots as a club the competitions are so conducted that the participants are contending for well earned and respected superiority in quick sight and steady aim, not for a paltry sum of money. It behooves sportsmen who would win most credit for the particular form of out-of-door recreation which they may select, to jealously guard its associations from contamination by the presence and influence of the pot-hunting trap shooter, rifle shot and yachtsman. Happily for the gentle art it can never come within the category of the pastimes which are bought and sold.

SPORTSMEN IN CONGRESS.

SENATORS AND REPRESENTATIVES WHO LOVE ROD AND GUN.

THE number of sportsmen in Congress at the present time is another evidence of the constantly increasing popularity of field sports. Members of Congress are representatives of the people in more senses than a political one. They reflect the social and mental status of their respective constituencies by their manners and conversation in private, quite as well as they represent the views of their political party by their votes in the House. A dapper, gentlemanly Congressman from New England or the Middle States is as different from the representative of a frontier district as black is from white. An expert can almost invariably tell from what section of the country a Congressman comes by his dress and general appearance. A majority of the members of the House are lawyers. If not sportsmen themselves, they have at least an idea of what the true sportsman desires to be, from knowledge of the game laws and experience in actions for trespass and violations of those laws. Before the war the sporting gentleman in Congress almost invariably came from the South. Even he was not a wing shot nor a master of the long range rifle. His kennels were filled with fox and deer hounds, and his stables contained hunters which would do credit to the fields of England and Scotland. To him the deep mounding of his hounds was the sole music of the chase, and of the infinite pleasure of the silent tramp behind the setter and pointer he knew little or nothing. At that time the hunter in the East never came to Congress. He was a being who was generally regarded by his money-making neighbors as a lazy, ne'er-do-well, whose only redeeming traits were his boundless good nature and willingness to divide his game with his friends. The farmer usually owned a gun, but it was used as a weapon of defense against predatory animals and birds, and occasionally as the means of securing game which was known to abound in adjoining forests.

Now there are three members of the House who have won prizes in pigeon matches. There are a dozen members who are expert wing shots, and the number of Senators and Representatives who take their vacations in company with rod and gun cannot readily be estimated. I will mention but a few of the gentlemen in Congress who are expert fishermen or hunters. Foremost in the list of experts with rod and fly is Vice-President Wheeler. Fishing is his sole means of recreation when Congress is not in session. With only one exception, during the past eighteen years he has disappeared from sight in the wilds of the Adirondacks for several months each summer.

The Saranac Lakes are his favorite resort, and the trout is his favorite fish. Great stories the Vice President can tell of his fishing trips through the great forests of Northern New York. He has taken the beautiful trout, brown trout, when never before a fly had been cast. He has witnessed the invasion by flocks of choice pools discovered by himself, and has seen the spotted beauties nearly exterminated from lakes and streams where they once leaped to his attractive flies in countless numbers. A year ago last summer Mr. Wheeler took Mrs. Hayes and a party of ladies and gentlemen from Washington to one of his favorite resorts in the Adirondacks and gave them a taste of camping out and fishing.

Senator McPherson, of New Jersey, is an ardent sportsman. He owns two setters, one a pure blooded Irish, and the other of thoroughbred English breed, which, it is his boast, can be lunted day after day without speaking a word to either. They are broken to perfection, and their movements in the field are directed solely by motions of the hand. Until the past season Mr. McPherson has always kept a sufficient number of birds on his country place in Northern New Jersey to afford him and his friends excellent sport. Last spring his handsome country house was destroyed by fire, and the quail on the estate, it is feared, have suffered from trespassers. Besides quail shooting Mr. McPherson loves ducking, and he owns a No. 8 gauge gun weighing fourteen pounds, built expressly to slaughter canvas-backs and red heads. During the past year Mr. McPherson has suffered considerably from illness consequent upon too strict attention to his duties as Senator and his business in Jersey City. Last summer, not feeling strong enough to endure the fatigues of the chase, Mr. McPherson went to the Thousand Islands and amused himself by taking five pound bass with a five ounce rod from the waters of the St. Lawrence. In this agreeable exercise the Senator quite recovered his health.

Senator W. C. Hampton, of South Carolina, is a true sportsman. The best evidence of his devotion to the charms of the chase is the single leg on which with the assistance of a crutch he is compelled to drag himself about the Senate chamber. General Hampton went through the war, fighting boldly in several of the most desperate battles of the rebellion and escaped without serious injury. A year ago General Hampton, who is very fond of riding, was severely injured while out on a hunt near his home in South Carolina. The horse upon which he was mounted proving a useless animal, General Hampton, rather than abandon the sport attempted to ride a mule. The animal kicked him in the leg severely, breaking the bones. Amputation was necessary in order to save the General's life. It is said that General Hampton is inclined to complain of the hard fate which took him safely through the war only to be maimed for life by the kick of a mule.

Senator Beck, of Kentucky, is also fond of the chase. He follows the hounds in season after deer and fox to the dismay of his wife who fears that an accident may happen to him in the field. Shortly before Congress met, Senator Beck was thrown from his horse and received bruises which laid him up for several days.

Senator Hamlin, of Maine, is fond of fishing the Rangely Lakes being his favorite resort for sport. Senator Windom is also something of a sportsman. There are other Senators fond of gun and rod, but those I have named are the only ones who may be considered devoted to field sports.

Foremost among the gentlemen in the House, who are sportsmen of repute, is Mr. Acklin, of Louisiana. I visited him at his handsome residence on Capitol Hill recently to examine his extraordinary collection of fire-arms. It is a treasure for him, to order by a London firm. The barrels of his pistols and guns are of finest Damascus steel, and the wood used in their construction is English walnut. Mr. Acklin is one of the very few gentlemen in Washington who now owns regulation duelling pistols. They can be loaded either from the breech or the muzzle, so as fully to comply with all the regulations of the code. The barrels are about a foot long, .38 calibre, and two-poum barrels to trigger. These have never been used in the field, although they were spoken for last winter at the time Senators Conklin and Lamar had their worthy difficulty on the floor of the Senate. The insulting language used by these Senators was afterward recalled, satisfactorily to both gentlemen. Mr. Acklin is an expert shot with the pistol. The two duelling pistols cost Mr. Acklin in England \$915. First, in the collection of such guns shown the correspondence of a 12-gauge wedge choke-eight and a half pounds, and has the Purdy top-action. An invention of Mr. Acklin's is attached to this, and to all of his guns. It consists of two small steel projections from each side of the standing bridge, so that the barrels when snapped down ready for firing fit closely on each side between these projections. The design of the invention is to prevent lateral action, as from continuous firing of one barrel the tendency of the shock is to force the barrels to one side. Mr. Acklin's duck-and-pigeon gun weighs eleven and a half pounds. The single breach is provided with four sets of barrels, and it really answers the purpose of four distinct guns. Two sets of barrels are 12-gauge, built to consume six drachms of powder. Two sets of barrels are 10-gauge, in which the customary charge is seven drachms of powder. The other two barrels are choked to suit all distances at the trap. One set of barrels is full-choked; on another set the left barrel is full-choked, and the right barrel is a modified choke-bore; on another set the left barrel is modified choke, and the right barrel smooth; and the fourth set are smooth and bell-mouth muzzles. The "Express" double-ride built by Purdy for Mr. Acklin, is a model weapon for large game. Four drachms of powder and an explosive bullet will kill a large animal. Recently Mr. Acklin gave to a friend a regular ducking-gun, 8-bore, which, owing to the time he is engaged in his professional and legislative duties, he had no opportunity to use. Mr. Acklin's fire-arms, bought from Purdy, cost him, including custom's duties, over \$8,500. The representative from Louisiana when he came to Congress abandoned his kennel, and gave thirteen blooded setters to his friends.

The plantations belonging to the Acklin estate are on the Bayou Teche opposite the mouth of the Red River. It is a wonderful country for game birds and wild fowl. French woodcock, quail, ducks, geese, etc., are always plentiful in France. There is no finer snipe sho ting in

the world than in West Feliciana Parish. In 1875, Mr. Acklin kept a record of his shootings. On March 17th of that year he bagged 302 snipe, and on the day following, 241, making in the two days of 543 snipe killed by a single gun. Mr. Acklin is of the opinion that this record has never been beaten. Mr. Acklin has two gold medals won in championship pigeon matches. One badge bears the inscription, "J. H. Acklin, Champion Pigeon-Shot of the South." The other medal styles him "Champion Pigeon-Shot of Louisiana." Both medals were earned in New Orleans. Mr. Acklin believes that he did his best pigeon shooting in Memphis, where he killed forty-eight out of fifty double birds. Mr. Acklin's duties in Congress occupy his time fully and he has no opportunity to indulge in his favorite sports. He has shot in a few sweep-stake matches with friends here in Washington and almost uniformly came off winner.

Another ardent hunter and trap-shooter is Congressman Finley of the Eighth Ohio District. Mr. Finley is a lawyer by profession, and every spare day that he can find during the season is spent by him in the field. There is some tolerably good chicken shooting in the vicinity of Mr. Finley's home, but when he can take a vacation of two or three weeks he starts for Spirit Lakes in Northwestern Iowa, where he slaughters ducks and chickens to his heart's delight. There is good fishing in the lakes too, and the rod and line are always companions with the gun when the Ohio Congressman starts out for sport. Mr. Finley is an expert at shooting glass balls. He uses a Scott gun.

Gen. Anson G. McCook of the Eighth New York District also has a reputation here as a good shot before the trap at pigeons or glass balls. Of Mr. McCook's performances in the field I know nothing, but he possesses all the physical requirements of a good shot, and his ability at the trap was learned, I believe, from previous experience in the field.

Congressman Poehler of the Second Minnesota District holds prizes won at the trap. He is a member of the local shooting club at Henderson, Minnesota, and a member of the State Sportsman's Association. Pinnated grouse are found in abundance near Mr. Poehler's home, and he is a constant hunter during the season. Mr. Poehler was born in Germany and came to the United States in 1848. All these birds have a royal good time. There are few birds in the mountainous region in which he resides excepting ruffed grouse, and that lordly bird is seldom found in great numbers. The fox hunting near Kanawha is done on foot. The members of the Long Island Club may be inclined to laugh at the idea of following hounds on foot, but a single visit to the mountain country of West Virginia would at once dispel the idea that hounds there could be followed on horseback. The hunters are in the region of high rocky ridges or spurs from the mountains, leading down to the creek bottoms. As soon as the dogs strike the trail the course that the fox will take is well understood by the hunters. They go to the top of a ridge and take seats. The fox circles around the ridge in full view of the hunters, the hounds in full tilt after him. Being closely pursued round crosses over to another ridge; the hunters follow, obtaining a new view of that picture, and on until the chase ends.

The delights of this heartful exercise, the grand mountain scenery, and the opportunities afforded during the chase for the use of the gun cannot be imagined by one who has not participated in the sport. It must not be thought that all of the sportsmen in Congress delight in the pursuit of small game. One of the most famous bear hunters in California is Representative Diehl of that State in the House. Romaldo Pacheco, of San Luis Obispo, is the gentleman's name, and he estimates the number of bears he has killed himself, or has helped to kill, at 100. Mr. Pacheco was the son of wealthy parents who owned immense grazing lands and flocks in the neighborhood of Santa Barbara. As soon as he was able to sit astride a horse he learned to ride, and at the age of twenty-one he was an expert hunter. Mr. Pacheco also became unusually proficient in the art of throwing the lasso, an implement which was used by all herders. Bears were plentiful near his home, and Mr. Pacheco learned to hunt them as follows:—Four men, experts in the use of the lasso, would ride to the place where bears could be found. Getting upon the trail they would ride after him and bring him to bay. While the bear was standing upon his haunches each of the four men would almost simultaneously throw their lassoes over his head, and riding in opposite directions strangle the animal or fasten his legs so he could not run, when he would speedily be dispatched. An unusually acute imagination is not required to perceive if one of the four lassoes failed to encircle the bear, or the horses ridden by the hunters were not perfectly trained, that the consequences might be extremely unpleasant. Mr. Pacheco tells the number of accidents which have occurred since he has happened in the pursuit of bears with the lasso.

Of the other members of the House who are good shots and fond of hunting I will name General Joe Hawley, of Connecticut; Mr. Robertson, of Louisiana, and Mr. Gunter, of Arkansas.

Washington, D. C.

GAME PROTECTION.

TAX THE GUNS.—We invite the fullest expression of opinion upon the question of taxing shot guns. A New York correspondent writes as follows:—

NEW YORK, Feb. 2d.

Editor Forest and Stream:—

I notice that there is a movement in Albany toward a two-years' prohibitory game law. There is only one class of sportsmen that can profit by such a law—that is, the pot-hunters. Laws or no laws, the pot-hunter will be bound to shoot, and a certain class of marketmen and hotel-keepers will be found ready to buy their game. Allow me to ask you to consider enough of the game, I shall have to have too many, and they are too complicated already. The game laws are broken every day, but how

often do you hear of anybody being fined or punished? What is the reason? Because nobody takes the trouble to complain, and everybody has not the time to do it. I have heard of quail having been brought to New York last month through the Long Island Railroad, by the brakemen and baggage-men of that road. Why, as a sportsman, did I not make any complaints? Because I had not the time to do it, and, besides, very likely I should have had to fight the whole railroad company, with very little prospects of having the sounders punished. Every sportsman knows that on the 31st day of last December there was more game left over than there was at any previous year, at least for the last three years. I am told that whole covys of quail were shot by pot-hunters on Long Island within the last three weeks, while this last snow lay on the ground.

Why, then, should we have this prohibitory law passed, all for the benefit of those pot-hunters? For my own part, I do not care whether this law is passed or not. I can have all the shooting I want, if I am in this State, in some other. But as a sportsman I protest against the passage of such prohibitory law. Everybody has not the time or the money to go West or South, and I am not selfish enough to see those that cannot go elsewhere deprived of their sport. If such a law should be passed, what is a man living in the city to do with his dog, especially if he is a good one? I have talked this matter over with a good many shooters, and they are all of the same opinion—such a law will only benefit the pot-hunter and the marketman, because the pot-hunter will have so many more birds to shoot at, and the marketman or hotel-keeper, having to sell them on the sly, will charge and get so much more for them.

What, then, is to be done to save the birds? The answer is very simple—enforce the laws that we have got now. The Society for the Prevention of Cruelty to Animals has its special officers to see that no one is not inflicting on the game and to have the game laws enforced. Let such men be appointed so as to have power all over the State, and not in one single county, and thereby you will soon stop all snoring and trapping, all shooting and selling out of season, and we shall have no need of any prohibitory law. The pot-hunters will disappear, and whoever will carry a gun will be more or less the ideal of a true gentleman.

What say my sportsmen friends about this? Anyhow, let them raise their voices against any prohibitory laws.

A TRUE LOVER OF THE SPORT.

MICHIGAN SPORTSMAN'S ASSOCIATION.—The fifth annual meeting of the Michigan Sportsman's Association at Bay City, Mich., last week, was attended by a large and enthusiastic delegation of sportsmen from the various clubs of the State, and was in every way a grand success. Elaborate essays upon various subjects of interest were read, and the Association well sustained its reputation as an earnest body of men.

EXPORTING QUAIL FROM NORTH CAROLINA.—Monroe, N. C., Feb. 2d.—Editor Forest and Stream:—I see by your last issue that a gentleman now at High Point, N. C., proposes to make arrangements for the shipment of quail from that town. He, perhaps, is not aware that there is a law to prohibit the export of quail out of the State, and it was owing to the fact of so many birds being shipped from there and Greensboro, a town a few miles distant, that such a law was passed. I learn that nearly two hundred birds were at Greensboro not long ago; the party attempted to smuggle them through, but unluckily for him, one old "Bob White's" feathers was seen sticking out of the box a little way, and he was led to the discovery. The party attempting to ship got wind of news and was seen no more. That agent no doubt had bird pie for days.

H. SMITH.

DEER IN VERMONT.—Bennington, Vt., Feb. 9th.—The deer placed on the mountains at Manchester have reached this place. One has been on the East Mountains for several weeks and is quite tame. Some hounds started one the other day and it ran through the upper part of the village. The farmers and lumbermen in the vicinity of Woodford claim that they have seen three or four at once, and that they are very tame, coming off the mountains and feeding with their cattle.

G. F. O.

MAINE.—Bangor, Feb. 5th.—The Norumbega Shooting Club, for the protection of game and fish and improvement in wing shooting, was organized last evening, with John P. Tucker, President; T. White, Vice-President; W. F. Seavey, Secretary; Fred T. Hall, Treasurer. The President, Secretary and Treasurer ex officio, with Messrs. Dugan and Abbott constitute the Executive Committee. The By-laws rules of shooting, with a constitution and by-laws were adopted. The organization starts off with eleven members and will receive many others.

NEW JERSEY QUAIL SEASON.—Toms River, N. J., Feb. 5th.—Permit me for the benefit of your readers to make a correction in an article appearing in your Game and Fish Directory, issue of Jan. 29th, dated Riverside House, Forked River, Ocean P. N. J., wherein it is stated that the quail season is from Nov. 1st to Jan. 1st, for the latter date is that on which the season closes in this State.

H. C. GLOVER.

President Ocean Co. Game Protective Association.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray.

Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Mallard, Snipe, Ducks, and Wild Fowl. "Bag and Gun" reports, including reports of special species of plover, sand piper, snipe, curlew, oyster-catcher, snail birds, phalaropes, avocets, etc., coming under the group *Littorale* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address;—after the following model:—

MINNESOTA—New Ulm, Brown Co.—Reached by Chicago and Northwestern Railway, 467 miles from Chicago. Hotel—Merchant's, Chas. Frost, proprietor; \$2 per day. Proprietor is game sportsman; best game taken of deer, good timing at seasons able rates. Game—In fall after Aug. 15th, pinnated grouse; after Sept. 1st, geese, brant, duck, mallard, canvas-back, teal, etc.; plover, crane and pelican; not plenty in spring. There are at least a dozen lakes within a radius of fifteen miles, where ducks are very plenty in fall. Fishing—Not very good; pickerel and black bass. For big bags of grouse write to
C. M. H. HEDGEMAN.

NEW HAVEN GUN CLUB.—Old squaws still remain unusually plentiful, with a good sprinkling of coots. The weather has been so windy of late that there has been but little shooting done in that line. Foxes and rabbits are very scarce. Armstrong & Fulton have concluded not to have any more game of deer, East Haven, and through their agent, Capt. Stephen Thompson, we were surprised to see Folsom's heart fail at the last feather left shot, backed as he was by the little Alderman gun. Our President expects a fine rabbit dog, which Howard is breaking for him. He gave us a field trial exhibition in Pops's store the other night, and all declared it first-class. SCISSOR ACTION.

NEW JERSEY—Toms River, Feb. 1th.—Some ice this week, but all gone again. Yesterday, Friday, was the best shooting day of the season in Mosquito Cove. Thirty-eight red-head ducks were killed and bagged in one stand by two men, and good scores were made all round.
S. K. Jr.

TENNESSEE—Nashville, Feb. 1st.—Foxes, quail, and fish are abundant—can be found within a few miles of the city, and dogs, guns, and fishing tackle of the most approved kinds are always ready for any kindred spirit which may chance our way.
J. D. H.

ARKANSAS—Mayesville, Feb. 2d.—Hunting here has been poor owing to the warm weather, yet a large number of deer and turkeys have been killed by the Indians, and hardly a day passes that one or more saddles are not brought to town (current price fifty to seventy-five cents in trade). Quails, ducks, etc., in abundance, no w, but chickens very scarce.
E. S.

JACKSONPORT, Feb. 3d.—Geese and ducks here in fair numbers now on account, we presume, of the cold weather. They are very wild. No other sport. No fishing as yet; but in that respect "every prospect pleases." YELL.

MONTANA.—Mr. Jameson, the young Irish baron, who, for the past several years, has journeyed from the green sod to engage in hunting and fishing sports in Montana, was unusually successful this season. His wagons returning loaded with the antlers of elk, moose, deer, mountain sheep and antelope, and the pelts of grizzly and black bear, mountain lion, lynx, wild cat and other splendid trophies of the chase. These valuable possessions, carefully preserved and packed, have gone forward to the old country, while Mr. Jameson, disbanding his party of four, and accompanied by his body servant, starts soon on a journey around the world.

DUCKING ON BIG SWAN.—Pillsbury, Minn., Jan. 26th.—This lake is situated about 115 miles northwest of St. Paul and is known as Big Swan. It is four miles long and a trifle over a mile wide, and its eastern shore is covered with patches of wild rice which make it just the place for ducks. In company with a gentleman from Massachusetts, we took our duck boat and at early dawn started for the lake, and after some rather hard pulling against the stream (we preferred taking the outlet of the lake for our path rather than the overland route) we soon came to the large bed of rice just at the foot of the lake, where our fight began. We have not space to describe that day's sport, but suffice it to say we bagged sixty-seven ducks and took a good nap at noon in the bargain. A sportsman can reach this lake at a cost of about \$7 from St. Paul, via Little Falls. Board can be had from \$2.50 to \$3 per week. Sportsmen desiring to visit the place would have a much better time if they would bring camptrails along with them. The water abounds in pickerel, black rock and "cat" fish, and nearly every kind of fish incident to fresh water. They bite very readily and we have taken from thirty to forty in one day with fly bait. As we sit by the window penning these few lines we look out and count twenty-nine prairie chickens within easy reach of my choke-bore which hangs on the wall. My finger slightly itches to pull the trigger, but I have never shot a prairie chicken, and I must not indulge. Any sportsman desiring to know more about this place can do so by making it known through the columns of FOREST AND STREAM, or by inclosing stamp and addressing as above.

A. D. CARPENTER.

THE ANCIENT DUCK EATERS.—R. M. Pool, the editor of the Niagara Falls (N. Y.) Gazette has been inducted into a gastronomical society of that town whose members are not only sportsmen, but bon vivants as well—

The "Honorable Order of Ancient Duck Eaters" is a local society of quite recent origin whose object of existence is unmistakably acknowledged in its name. The membership at present comprises Messrs. J. M. Witmer, H. H.

Sheldon, C. E. Davis, C. H. Piper, Wm. Samways, S. T. Murray, H. F. Pierce, John P. Hulet, Wm. Pool, James H. Boyd and R. M. Pool. Messrs. Witmer and Sheldon have been the hosts at both the "Grand Eats" that have been given.

The order have had two sittings at Mons. Romaine's Rendezvous Francaise, the second last Wednesday evening, and we can bear witness as a duly initiated member of the society that the cognomen of the order is no vain and empty sounding phrase, but that membership implies an intimate acquaintance with fowl the date of whose death the memory of man runneth not back to recall. The mantle of venerable antiquity that enfold the fragrant dishes is not woven, however, of unsocial and impetuous grays, but in its impalpable presence adds a very marked and peculiar mirthfulness to the spirits of all.

Last Saturday evening Mine Host Isaacs, of the Prospect House, gave an elegant banquet to a number of invited friends from both sides of the river. The invited guests who were present were Messrs. C. E. Davis, J. M. Witmer, J. V. Carr, H. H. Sheldon, Geo. E. Curtis, J. W. Pettebone, R. O. Fulton and R. M. Pool of Niagara Falls, and Messrs. T. F. Ellis and Chas. Davis, of the town of Clifton. Messrs. S. T. Murray, H. F. Pierce, F. R. Delano, H. S. Ware and A. J. Hamlin, of this place, and J. P. Hulet, of Clifton, were unable to be present, and sent their regrets.

BUCKSHOT IN CHOKER BORES.—North Platte, Neb., Feb. 4th.—I notice in your issue of Jan. 29th two articles on buckshot in choke bore guns. I like both of those gentlemen's mode of loading, but I have met with more and better success by loading in the following manner, using full charge No. 10 gun: 5 drs. of Dupont's eagle duck No. 1 powder, using 2 pink duck wads or powder as tight as can be put by hand. The gun will chamber 3 No. 4 buckshot nicely at the muzzle. I put 9 of them in the shell and pour hot tallow and white wax upon the shot, and place a thin black edge wad upon them with a neat crimp. With such loads I have killed deer at 110 yards. I killed seven out of ten deer dead, the distance varying from 85 to 110 yards, and wounding two so they could not get away, and followed the other one for half a mile and found him, a big buck weighing 180 lbs., dead. Most of the sportsmen here have their shells loaded in this way.
W. W. C.

LARGE SHOT IN CHOKER BORES.—Dumbarton, N. H., Feb. 4th.—Why do not our contributors who have been describing their several different methods of loading choke bores with large-sized shot give the targets they can make at long range, say 80 yards, instead of saying that such and such a load will stop a deer at 75 yards simply because they may have killed one at that distance. Surely a load which would give a good average at 80 yards, in a 30- or 40-inch target would be more satisfactory than an occasional good target at a much longer distance. A couple of years ago while making arrangements to go to Florida, I tried a few shots with buckshot in a 10 bore 94, pound gun, 5 drs. powder, 15 buckshot chambered at muzzle, at 90 yards, 40 inch target. The first shot put 5 shot in a 24-inch circle in centre of target. I then thought I had the best gun for buckshot I had ever seen, but after several shots changed my mind, as sometimes I never shot a deer, and I got all, and in most cases only put one or two shot in the 40-inch square. Since then I have tried many of the different ways of loading, such as filling space between shot with melted wax and tallow, using sections of paper cartridges cut to fit the muzzle of gun, etc., but never could get as good an average as with loose shot. Greener, in his work on choke bores, states that a good gun loaded with buckshot will chamber at muzzle and the space between the shot filled with melted tallow should put the whole charge inside the head of a flour barrel at 40 yards. This may be so, but it is very much better shooting than I have ever seen.

Now, dropping the buckshot, I would like to ask some of your readers (who own close-shooting guns) what would be an extra good target for a 10 or 10 bore gun, with 4 or 5 drs. powder, 15 buckshot, at 30 or 40 yards, 80 yards. The best shooting I have seen with this size of shot was made with a 10 bore 10 lbs. Parker gun at 45 yards, 24-inch target, six shots, the average was 33. Same gun and same charge (4 drs. 14oz.), at 80 yards, 30 inch target, 4 shots, averaged 114. The 80 yards target was made off-hand, shooter holding about two or three inches above centre of target. Some of the gun makers say that a 10 bore 10 lbs. Parker gun, at 30 or 40 yards, and do not know what would be considered extra good. I think it would interest us to know what to expect from a good gun at this distance with the sized shot I have named.
C. M. S.

RECOIL PADS.—London, Jan. 13th.—Editor Forest and Stream.—In your paper of Dec. 15th I notice the following: "A La Porte, Ia., a gunner was lying in the bottom of a boat, and discharged his gun at some ducks, but not having it firm against his shoulder, the recoil was with such force that he broke his collar bone." It will, no doubt, interest your readers to learn that a simple device for preventing accidents of that nature, or rather for preventing a gun from kicking, and, in some cases, from being injured by many English sportsmen and military and naval officers. The device is the invention of Col. H. A. Silver, of the eminent firm of S. W. Silver & Co., of London, and consists simply of an anti-recoil heel plate, composed partly of hard rubber and partly of soft vulcanized rubber, joined firmly together, and fitted on to the butt of the gun. It makes a very neat finish, and will wear as long as the gun lasts. No effort has so far been made to introduce the device into America, but Col. Silver has secured a United States patent, and intends soon to send samples of his heel plates for inspection by American sportsmen and others interested in shooting.
JOSEPH DIXON.

QUAIL SHOOTING IN TEXAS.—San Antonio, Texas, Jan. 29th.—The quail of Texas are somewhat different from those of the North; not in looks but in habits. An early start found us by 7 A.M. amongst the corn fields of the Colorado River. Our dogs, two as fine blood as can be had, found scent within ten yards of the fence we had just climbed. J's gun gave them both barrels, mine one not a feather. Shot four rabbits, without a deer to be seen. Birds well marked down by tail weeds; hearing our dogs on a tramp of half an hour; decided the birds had run. Dogs came to a point 200 yards further on; a bird to each

of our guns. Covies well scattered and afforded us two hours' good shooting and many a one missed for another time. "It's strange," remarked J., "how much shot a quail can carry." We entered another field; separated, and had our dogs on two separate covies about the same time. Hanging away a half-dozen shells, both the dogs scattered and working into each other till we had them rising like snipe; still J. was not satisfied; his shells were too heavy. "Loaded too much powder," he remarked; "four drachms. How much do you shoot?" I remarked, "I always give a gun all she will stand under, 12 gauge, 84 lbs., charge 5 drs., 14 ozs. No. 9 shot, is what I use at trap and quail, duck or anything comes along. I use 40 gauge and no. 10 shot for snipe, but I am sure to use a fine tool." I like to see a bird drop at a hit hard, which cannot be done with small charges. I allow some dogs do not require such charges, but it's the exception, not the rule. We had our shooting coats well lined, and started to deposit in our wagon. Still our dogs came to several points, and J. made some remarkably good shots, dropping a quail full 50 yards by giving six feet lead ahead. Further on we scattered a hawk sailing over. As he neared I held on him. He seemed perfectly satisfied. He had taken a good measure with his sharp eye. I ran my gun about six feet ahead and touched the left trigger, to see him double up and strike the hard ground just five yards behind us. "Big loads," I remarked, "always count." Depositing our game in a safe place from hawks, we agreed to hunt the Colorado bottoms, a mass of grapevines, weeds eight feet high, mixed up with small post oaks. The dogs could not be seen ten feet ahead, and quail in all directions, perched on trees and darting over our heads in such confusion that we could not shoot low for fear of striking each other; birds fell everywhere, and the dogs were confused, dropping one bird to pick up another. We gathered what we could find, just 48, and started for home to get the cockle burrs out of our boots, pants and sleeves. Our dogs, orange and white, would have been taken for red Irish on sight. I have seen these same dogs hunt all one hot day covered with burrs, one with three needles of the prickly pear through her nose, and still ready to stand a point and retrieve her bird. I's said a setter cannot stand Texas. I have seen the Spanish pointer, foot-sore, tail bleeding, lying under a shade, his master using a whip to get him out to no purpose; our blue bloods, tongue bloody but still game, and I believe he called them "range dogs." I believe to keep pace with our bred dogs a sportsman must handle hammerless guns, the most improved shooting coats, belts and every approved tool, and he may just keep even with them.
ALMO.

THE YOUNG TRAPPERS.—They were brothers, aged respectively nine, eleven, and thirteen, named Nathaniel, Peter, and Philip, whom the boys used to call for short "Nat," "Pete," and "Phil." Like all other country boys thirty years ago, they were suddenly struck with a mania for trapping and snaring rabbits. The woods in which they plied their amateur skill were situated three-fourths of a mile from the native New Jersey village, and on a farm owned by one Dr. Kissam, who had in his employ a negro called Joe, who took very kindly to boys. The heavy timber of the woods had been cut down two or three years before, and the old stumps were fringed with a new growth of saplings, which were about the right size to bend down for snares. It was a crisp November afternoon when the young trappers struck a bee-line for the woods. The boys at first had no implements of war in hand, strings, jack-knives, and sweet apples for bait. They had little difficulty, with Joe's help, who joined them in the woods, in selecting suitable places for their snares. By sunset all were ready for the unwary little "cotton tails." The three sides of a hollow square were laid up, the sapling bent, the string tied on, the noose adjusted, and the bait placed. There were three—one for each boy. Nat's was nearer the edge of the woods than the others.

What expectations awoke in their breasts that night! How lively their imaginations worked! How they fell asleep with their minds full of snares, and their first thoughts in the morning were about them. Pete woke Nat, with whom he slept, and then called Phil, in the next room. They were now dressed and off for the woods, though it was yet quite dark, for they had some misgivings as to Joe's honesty, and feared that he might have it in his mind to go there before them and rob them of their game.

By the time they reached the woods it had grown a little lighter, and as they approached the first snare, Phil, who was ahead, shouted out, "Nat's snare is sprung." They all struck a run through the bushes, and, coming closer, "He's got a rabbit," cried Pete, and "No," said Phil, "it's two white for a rabbit; it's a possum!" When they arrived at the spot the truth came to their utter dismay; it was a sheep. Such a scared lot of boys you never saw. The woods were in the pasture grounds, and they had actually caught one of the Doctor's sheep. What to do was the question, after they had recovered some from their great surprise and alarm. Near by was the mound of a tree which had been cut down, and they had made an excavation where the roots used to be, and they resolved to drag the lifeless carcass into that, which they did, and covered it up as well as they could with leaves. Then they hastened to the other snares, which were found unmolested, completely demolished them all, and returned home in a very different mood, as can be readily imagined, from that which they were in when they set them out with better and of every anticipation. For one whole week, while Joe was hunting the country over for that lost sheep, the young trappers went about like little criminals, carrying in their anxious bosoms the guilty secret. By-and-by the sheep was found, the mode of its death discovered, and it devolved upon the father of the young trappers to pay for it, and with a horsewhip to put a most emphatic finish to the episode. The boys, however, were somewhat relieved from the agony of hearing about in one's bosom a guilty secret.
HIX.

CONNECTICUT.—*Coltville, Feb. 4th.*—Canton Road and Gun Club, Riverside Range; practice meeting at 200 yards, off-hand; 3-balls, 10 shots:—

O. B. Hull.....	8	10	12	9	10	10	8	68	42
J. D. Westerman.....	7	10	10	9	11	8	10	68	42
J. D. Andrews.....	12	8	12	8	9	10	10	94	42
H. W. Hall.....	9	7	9	9	6	11	10	76	37
J. H. Foster.....	8	10	12	6	7	7	3	57	37

N. H. A.—The Board of Directors have asked the Secretary of War to authorize the three division commanders—Gen. McDowell, Sheridan and Hancock—to raise teams for the Hilton Trophy contest in September next.

Col. Wingate, Capt. Story and Col. Scott will be the range committee for the coming season. Col. Ward, Major Fulton and Col. Cuyperwill be act as prize committee, and Major Williamson, Capt. Casey and Mr. J. S. Grant as the finance committee.

—The members of the N. Y. Rifle Club will practice at Hartung's Park, Morrisland, each Wednesday.

NEW JERSEY.—*Greenville.*—Two hundred dollars in prizes have been offered for a side tournament to be held at the range of the Balvedere House; 10 rounds of hand at ready-measurement target are fired with .22 cal. rifle. H. Geiger, R. H. Drake and T. Myer are the shooting committee, with W. M. Farrow and M. Fitz referees. Re-entries are unlimited, and the tournament will remain open for a month, or until 200 targets have been shot.

ESSEX VS. FRELINGHUYSEN.—*Albany, N. Y., Feb. 4th.*—A match took place on Wednesday, Feb. 4th, between the Frelinghuysen and Essex Rifle Associations on the range of the former, resulting as follows:—

FRELINGHUYSEN.		ESSEX.	
F. W. Lynn.....	42	W. Duercher.....	42
R. B. Beach.....	40	A. Welter.....	41
A. C. Youmans.....	41	I. Huber.....	44
H. H. Wyman.....	41	A. Meier.....	43
H. H. Wyman.....	41	J. S. Doon.....	39
R. C. Denman.....	37	J. H. Huns.....	44
S. K. Walsh.....	42	J. H. Huns.....	44
C. Boden.....	45	J. D. Duercher.....	43
Geo. Wiegman.....	40	W. Cleveland.....	39

Total.....436
Average, 8.8
Shot at 200 yards distance 10 ft. Ballard rifle. This is the third match shot by the associations, which makes the Frelinghuysens champions, having won 2 out of 3.

S. K. Walsh vs. F. W. Lynn. Although the weather was threatening this morning, the members of the New Orleans Rifle Club and some of the members of the Washington Artillery met at the New Orleans Rifle Park for practice and had quite a lively time. After some individual shooting two teams of three men each were formed, and a match, of which the following is the score, was shot:—

Charlton.....	200 yards.....	3	5	4	5	4	3	—62
.....	500 yards.....	4	5	5	4	5	4	—62
Sompuri.....	200 yards.....	4	5	4	4	4	5	—62
.....	500 yards.....	4	5	4	5	4	5	—62
Michel.....	200 yards.....	3	5	4	4	5	4	—60
.....	500 yards.....	4	5	4	4	5	4	—60
Grand total.....								184
Arms.....	200 yards.....	4	5	4	4	4	5	—63
.....	500 yards.....	4	5	4	4	4	5	—63
Spori.....	200 yards.....	3	5	4	4	5	4	—61
.....	500 yards.....	4	5	4	4	5	4	—61
Gertels.....	200 yards.....	3	4	4	4	4	5	—59
.....	500 yards.....	3	4	5	4	4	5	—59
Grand total.....								500

The members of the New Orleans Rifle Club have determined to shoot every week, and it lies in their power they will revive rifle shooting in this city.

PANOV SHOOTING.—There is another doctor in the field, and this is how the Kingston (Can.) *Whig* tells of his doing:—"Dr. Knight with a long Winchester repeating rifle, began at 200 yards and made ten straight bull's-eyes; position, standing; size of bull's-eye, six inches in diameter. Then firing 500 yards, bull's-eye fourteen inches in diameter, he made fifteen bull's-eyes out of sixteen shots. After having a warm, as the weather was very cold, the Doctor displayed his short-range Winchester sporting rifle, doing some wonderful shooting. First he took the pipes from the mouth of a friend at fifty yards, breaking six in succession, the length of the stems of the pipes being four inches; then he shot six fifty-cent pieces, held between the thumb and finger, at forty yards distance. This was done without a miss. The Doctor finished hitting twenty-two apples out of twenty-four, thrown into the air by the band, as glass balls and trap were not to be had in Kingston. The Doctor is confident that he can break ninety-five glass balls out of one hundred. At the same time, he fired six of his Winchester rifle (sixteen cartridges) and discharging the whole at a bull's-eye eighteen inches in diameter, distance 100 yards, in the short space of just thirty seconds.

WHAT A HUNTER THINKS.

Editor Forest and Stream:—

I have from time to time been much interested in the discussion as to what was the best sporting rifle, and my observations have been quite extensive, and to me, resulted very satisfactorily. For game no larger than deer, bear and panther, my conclusions are that there is nothing equal to a .44 Winchester. Now, the hole or opening made by the bullet depends much more on its power of penetration or striking force than size—that's my opinion, at least, and that is formed from observation. A .44 Winchester will go clear through a Texas deer from end to end, and that is all any gun could do. To illustrate: While on a hunt in November in the mountains in Northwest Texas, on a bear hunt, old bruin was shot through and through with a .55 No. 1 gun, yet he kept up his pace until another party rushed up and gave him a shot from a .45 Colt revolver, which finished him. Now, the hole or opening made by the No. 1 bullet was much larger than the revolver ball had made, yet was not so effective. Why? Simply because it was not so well placed; and permit me to say that that is simply the whole secret. A correct or accurate shooting gun, well aimed, and of .44 cal., will do the work just as well, and not be so disastrous to the shoulder of the shooter. I've had enough of your kickers.

Now, I wish to say something about deer running. I have seen a deer, with his antlers, killed by different caliber balls, run from one to five hundred yards, while had the same ball struck the spine the game would have been instantly down. I don't consider an Express or the Explosive ball any more fatal than

a .44 Winchester. Why? Simply because the explosion takes place at the surface or near the surface, and not only retards the force of the ball, but gives it less killing power. I say let us have more practical and less theoretical talk, and you can get hundreds of practical hunters here on our border to testify to what I say.

I will give an instance that occurred to me in November last. One morning early, just as soon as it began to break day, I started out after deer, and had gone about a quarter of a mile from camp, when I came upon a bunch of seven or eight deer, which were about 150 yards from me, and took deliberate aim on a fine, large doe and fired. I heard the ball strike very plain. My aim was to put the ball in at point of shoulder, as the deer stood quartering to me, exposing the right shoulder. I found afterward the shot had been true to my aim. The ball entered just in front of right fore-shoulder, came out just behind the left shoulder. You see the course of the ball was quartering forward, and severed the aorta artery, close to the base of lung, and ranging very close to the heart. Now, this is generally considered a very fatal shot, yet the doe made two jumps, then fell or lay down. On my approach she jumped up and ran up a hill a hundred yards, then lying down. Again approached cautiously, but being brushy and stony ground she again took the alarm, and ran over a hundred yards further. This time I gave her more time and approached her more cautiously, and as her breathing was very distinct—I being able to hear the blood gush from the wound with every breath—it was easy to follow. I had got within twenty or thirty yards before she choked with blood. The lungs were completely filled with blood. Dr. Gray, of Chicago, who was one of the party, and myself, made a very thorough autopsy, so I know of what I write. Now, an Express ball or a ball of large caliber could not have made—following the same course—a more severe and fatal wound. I saw at first the shot was fatal, and I had desire to see what length of time she would live and the ability of speed, I didn't attempt to shoot her again. I have seen dozens of deer shot through the heart, and that organ rendered almost into fragments, and do not think one of them ever dropped in their tracks, and most of them ran over a hundred yards.

I say I prefer the Winchester rifle for sporting purposes to any other. My reasons are: First, you have, as I use a 28-inch octagon barrel, sixteen charges in reserve, which can be rapidly used. Then they are very accurate in aim, and do not affect a nervous person by the heavy recoil that the 7 gr. powder, .430 gr. ball do. In fact, the Winchester .44 cal. rifle I consider by far the most practical sporting rifle.

I think Mr. W. Habbeth and a correspondent from St. Louis who subscribes himself "Hunting Rifle," on the wrong track. I speak from experience. I tried that line until I got tired. More deer are shot inside of a hundred yards than over that distance. Occasionally one is shot two, three, or four, or even six hundred yards, but here in Western Texas, at least, where deer are only still hunted, there are very few shot over 100 yards, or 150 yards, and at that distance I find the rifle I speak of the most accurate. I groped about in the dark for several years, and I give my experience thinking it might be of use to some brother sportsman. I can safely say to W. B. D. Gray that the Winchester, .44 cal., 28 inch octagon barrel sporting rifle is accurate as any sporting rifle up to four or five hundred yards, and I dare say he will never have occasion to shoot at game at a greater distance.

Men who make a business of killing game for a living certainly adopt the best gun, or what they think the best, and nine out of ten of these men use the Winchester.

For fear some may suspect this as a paid-for article, I will say I never had even as much as a cartridge of the Winchester Arms Company that I didn't pay for, and I have never had a word of correspondence or otherwise with any member of the company.

SHELLS THAT DO NOT STICK.—*Toledo, Ohio, Feb. 1st.*—Editor Forest and Stream:—My experience with mid-range .40 and Creed-moor .44 Ballard shells has been, for the first few times shooting, perhaps 15 per cent. of the shells to expand, so as to cause trouble, but never have I failed to remedy it for good.

I think the trouble is that a portion of the shells are soft, and others at spring temper; and when they have been used long enough for the shells to become hard, they are then always do by use, then by chucking them on a lathe, and with a little emery paper, until they fit perfectly, there will be no further trouble, provided that the shells are properly cleaned and the balls not driven into the shells. I have seen shells wholly spoiled by not cleaning and then forcing a molded ball (half-inch) into them.

There is one thing which is unaccountable to me, and that is, my .44 shells, or part of them, contract at the mouth when shot, and will not receive the same style of ball without being rimmed out. Will some one give me the cause?

East Boston, Feb. 6th.—Editor Forest and Stream:—After hearing silently my favorite rifle and shell attacked by strangers—few and far apart it is true, but nevertheless adversely criticised in the FOREST AND STREAM to the effect that the shell they called "Everlasting" expands to an extent which renders it useless after a few firings—I feel compelled to plainly state my experience. I have shot a Ballard with the Everlasting straight shells (40.63) for the past two years, firing the rifle at a low estimate thirty times a week, and have not yet met the least annoyance with the shells nor with the rifle if it was cleaned; and further, this is not only my experience, but I have never heard a word of complaint against the Everlasting shell or Ballard rifle during the two years I have been a member of the Massachusetts Sports Club. It will be at once seen that a firm turning out thousands of sporting rifles, that there will necessarily a few imperfect rifles get into the market. The imperfections of a rifle will first show themselves in that part which is most in use, and as the shell has to conform its surface every time the rifle is shot to the surface of the chamber, the honest cause for complaint, if any, will be found in the chamber of the rifle, and not in the shell. If one orders a rifle of a manufacturer and finds it is imperfect, his first impulse is to send it back where it came from, have it remedied, and returned free of expense before publishing a criticism on shell or rifle of whose "merits" the average shooters know so little, however well posted he may be regarding effects.

For SALE.—Two thousand high grade sheep; young, good condition, two thirds ewes. A. W. Gilbert, Colorado Springs, Colorado.

BETTER TIMES.—The business revival and new era of prosperity which has commenced are in keeping with the increased health and happiness all over the land resulting from the general introduction of Warner's Safe Kidney and Liver Pills. "I have been cured of my kidney trouble," says Rev. Dr. Harvey, "seen but little less than miraculous."—*Advs.*

Archery.

NATIONAL ARCHERY ASSOCIATION.

AT noon on the 28th day of January, 1880, at the Palmer House in Chicago, the annual business meeting of the National Archery Association was called to order. In the absence of the President, Mr. Frank Sidway, of the Buffalo Toxophilites, was called to the chair, the Corresponding Secretary, Henry C. Carver, Esq., acting as Secretary of the meeting. A letter was read from the President, Hon. Maurice Thompson, which was received and ordered published in the organ of the association, the *POUNCE AND SHIELD*. The minutes of the last meeting, which was held at Crawfordville, Ind., Jan. 23d, 1879, were read and approved. The report of the Recording Secretary was read and approved. The report of the Corresponding Secretary was read and approved and ordered to be published in the FOREST AND STREAM. The Corresponding Secretary having acted as Treasurer, his report was accepted as Treasurer also. The report of the Executive Committee was received and ordered placed on the agenda. The delegates then proceeded to discuss the property of the association, the constitution, in several particulars. On motion of Frank Sidway, Esq., it was resolved to amend article 4 of the constitution by striking out the words "fourth Wednesday of January in each year at 12 o'clock m." and substitute therefor the words "Monday next preceding the grand annual meeting at 12 o'clock m."

Upon motion of Mr. Edward Brewster it was resolved to amend Article 6 of the constitution by adding the words, "Each society shall pay to the Corresponding Secretary on or before June 1st in each year, as annual dues, a sum equal to \$1 for each male member in said club, and no person shall shoot at the grand annual meeting unless the dues of his or her society shall have been paid as above. Each archer entering the competition for prizes at the grand annual meeting shall pay an entrance fee of \$5."

Upon motion of Henry C. Carver, Esq., it was resolved to strike out all of article 7 of the constitution which follows the words "voluntary withdrawal of societies." The following resolution was introduced by Henry C. Carver, Esq., and carried by a unanimous vote:

Resolved, It having been found necessary for the success of the first grand annual meeting of the National Archery Association that a contingent guaranty fund be prepared against loss to the Executive Committee in the conduct of said meeting, and in pursuance whereof a written instrument of guaranty was prepared and executed by the signatures of many generous archers and patrons of archery throughout the United States, and whereas by the excess of expenditures of said meeting over the receipts, it became necessary to assess against each and every subscriber to said guaranty fund the sum of thirty-eight (38) per cent. of the amount by him subscribed; and, whereas, the Kokomo Archers, of Kokomo, Indiana, subscribed to said guaranty fund the sum of \$800, and pledged themselves in honor to pay their proportionate part of the aforesaid loss, and whereas, upon presentation of their proper assessment, they utterly refused to fulfill their pledge to pay their assessment or any part thereof. Therefore, Be it resolved, that because of the wanton breach of their pledged faith, which between gentlemen and archers in any cause should count as null and void, the said Kokomo Archers are hereby expelled forever from the National Archery Association; that the Recording Secretary is hereby ordered to expunge their names from the roll of societies of the association, and that this resolution be published in the FOREST AND STREAM.

Upon motion of H. C. Carver, Esq., it was resolved to amend Article V of the constitution by striking out the words "from the delegates present."

Upon motion of Will H. Thompson, Esq., it was resolved to hold the second grand annual meeting of the National Archery Association at the City of Buffalo, N. Y., on Tuesday, Wednesday and Thursday, the 13th, 14th and 15th days of July, 1880.

Upon the motion of Henry C. Carver, Esq., a vote of thanks was tendered to the retiring President, the Hon. Maurice Thompson, for the valuable services rendered by him to the association during the year of his Presidency, and although he declined to allow his name to be further used in connection with that office on account of the press of other labors, it is earnestly hoped that he will often give to the association the benefit of his encouragement and advice.

The following officers were then chosen by unanimous vote, to serve until the next annual business meeting:—

President—Henry C. Carver, Highland Park Archers.
Recording Secretary—D. V. H. Manier, Toledo Archers.
Corresponding Secretary—E. B. Smith, Buffalo Toxophilites.
Treasurer—E. B. Smith, Buffalo Toxophilites.
Executive Committee—Samuel S. Spaulding, Buffalo; E. B. Smith, Buffalo; John B. Sage, Buffalo; Frank Sidway, Buffalo; S. E. Egan, Chicago; Will H. Thompson, Crawfordville.
Upon motion the association adjourned to meet at the Palace Hotel, at Buffalo, N. Y., on Tuesday, July 13th.

HENRY C. CARVER, Secretary.

Mr. Carver's Report.

Mr. President and Delegates of the National Archery Association:—

The time appointed by the National Archery Association under its Constitution for the holding of its inaugural business meeting having now arrived, I have the honor to submit a brief resume of the year's accumulation of facts and incidents in the history of the Association as followed and directed by the National Archery Association of the United States. Late in the fall of 1878, a few gentlemen archers, realizing the necessity of a confederation of clubs under one general management, and of giving national life and strength to so pure and fascinating a recreation as archery, agitated the subject of calling a Convention for the purpose of permanent national organization. All of the prominent clubs throughout the country, with one accord, indorsed the movement and united upon Crawfordville, Ind., the accredited home of archery, as the fitting place for holding such Convention. Accordingly, the meeting was called for January 23d, 1879, at Mayor John W. Ilmsay's office in Crawfordville, and there, at the appointed time, the foundation stone of archery in America was laid, deep and firm, and true, and has been built upon, and the substructure is now a superstructure, and it is the bounden duty of every member identified with the Association to see that the work of building goes on until the edifice is complete. Of archery it may well be said (what has already been said) that it is a game which offers no temptingly dark corners where rascality can hide, and never has so shamefully and startling disclosures of personal profligacy or corruption; but we may boast

enough to dissolve; add yellow resin, three parts; and, when melted add turpentine, four parts. To polish woodwork.—Rule down with pumice-stone and water till smooth, then polish to a bright surface with powdered tripoli and linseed oil. *Notice Pacer.*—From practice this rule has been deduced: a sail vessel will make a fair six times that of her breadth, requires for a leaped, four knots per hour an impelling force of 45 pounds per square foot of immersed section if the ship is of normal shape.

QUAKER CITY YACHT CLUB.—Many new boats, including cabin yachts, have been added to the fleet, and a club-house is soon to be erected. A committee has been appointed to consider this matter. We congratulate our Philadelphia friends upon the decisive turn affairs have taken looking to the permanent establishment of real yachting in their waters.

THE COMING.—Every one knows this ship and her enviable record as a fast racer. The recent gales nearly made match-wood of her, and it is only too likely that her skipper and crew of two men have been lost by trusting their fate to a larger vessel which went ashore in the same gale, and was completely wrecked. L. I. Easton's *Neck, L. I. The Coming* belongs to Mr. Stephen Peabody and was the latest addition to the growing fleet of the prosperous Atlantic Y. C. She had been "ordered round" from New London to New York by tow, her owner desiring to have her put in commission at an early date. The tug left the Thames Feb. 2 with the brig *Guiseborough* and the yacht in tow. During the night a northeast gale overtook them, and the tug was obliged to round to with her tow for safety off the Thimblebs. The yacht then broke adrift, and the brig soon followed suit. The latter went ashore off Northport, and all hands were lost. The *Coming* was sighted four days later off Southold, and fishermen put off to her and anchored her. The next day her owner had the ship taken around to Greenport to refit. As both anchors were on the bows and the boats at the davits, it became evident that her crew had made no attempt to stay by their vessel and trust to the ground tackle, but had sought other means of safety. The chafe and marks of collision on one side also seemed to indicate that the yacht had been laid alongside of a larger vessel, from which the conclusion was reached that Capt. Germaine, his brother and a deck hand had boarded the *Guiseborough* and met their death in the fate of the crew. The latter's name had not yet been heard of. The *Coming* carried away her spars, ripped her ribs, and had some damage done to her deck fittings; otherwise she seems to be in fair enough condition after the pounding she underwent on the beach. She was built by Poillon in 1868 for Mr. Nichols from a model by "Bob" Fish, and is 62 ft. 6 in. on deck, 57 ft. w. l., 20 ft. beam and 5 ft. 6 in. deep. She was subsequently sold to Mr. H. H. Fay, of Boston, then became the property of Mr. Samuel P. Blagden; reappearing in New York waters again, was once more sold to Mr. G. B. Haven, of N. Y. Y. C., and was only quite recently by Mr. Peabody, of Brooklyn. It seems almost incredible that such a flagrant case of wreckage could occur within the confined limits of the Sound, and it is to be regretted that full information will not be forthcoming unless some of the unfortunate crew supposed to be drowned should yet turn up.

THE HUNAWAY.—This fast little steam yacht has been bought by Mr. E. A. Buck, of the *Spirit of the Times*, from Mr. Belden, the latter building a large iron s. s. yacht in Chester. Vice-Com. John R. Walter is also reported as having purchased the *Fleur de John*. The well known Vice-Commodore wants with two schooners is a mystery.

ENGLISH WINNINGS.—Value of prizes sailed for in British waters for 1879 was only \$18,000. In 1870 the maximum was reached, amounting to \$67,500, and in 1879, owing to business depression, the figures were \$51,000. In the same year the winnings in America consisted of 484 prizes, with a value in the neighborhood of \$9,000.

THE HENRIETTE.—Mr. Henri Say is again cruising down the coast in his fine steam yacht *Henriette*, a new shaft having been supplied by Malster & Heny, of Baltimore.

A LADY YACHTING.—Mrs. Brassey, already well known to the literary world, has added to her fame as a writer and acute observer of current affairs in her latest book, entitled "Sunshine and Storm in the East," published by Longmans, London. In it Mrs. Brassey records her impressions of the places visited during a cruise in the Mediterranean in 1874 and 1878, and portrays life as she found it in Constantinople and the East, and adds in an appendix the approximate expenditures of the cost of a yacht and keeping her in commission.

OSHKOSH YACHT CLUB.—A correspondent writes:—"We claim to have the fastest yachts of their size on the Continent. Am aware this is a large boast, but we mean to make it good. We have often outbeaten New York built boats on our native stock."

NORFOLK AS A YACHTING PORT.—It is rather strange that so little fall and winter cruising should be indulged in by those who have the leisure for a voyage to the southward during the "off" months. With Norfolk as a headquarters, many a line day may be found during fall and winter where anchors may be tripped to advantage for a sail up Chesapeake Bay, or, with the time at command, for a more extended run down the coast, with port, and a visit to the Bermudas. Norfolk has a fine harbor for yachts; no better, in fact, could be made to order. The city supplies water and provisions at very moderate rates. The holding ground in the harbor is good, and the anchorage not too deep, while in the bays and lights are the number of yachts can lay in should command the place to the New York public especially is the excellent communication to be had with Norfolk by way of the Old Dominion steamship line. The vessels of this company sail three times a week with clock-work regularity, no delays on time, and leave nothing to be desired in the way of comfort and even luxury of the table and sleeping accommodations. A trip on the *Old Dominion*, the *Wyanoke*, *Manhattan*, or any of the other steamers, is the homeliest and the most comfortable and delightful voyage, devoid of all the horrors of a prolonged trip at sea, owing to the size and fitness of the vessels for their work, and passengers may know that their safety as well as convenience is intrusted by the company only to officers of the highest qualification as seamen and gentlemen.

Distance between Norfolk and New York is virtually annihilated for the yachtsman can leave New York one day after business hours and pull aboard his yacht in Norfolk the afternoon of the next day. Returning, the same time only need be consumed. With its headquarters in Elizabeth River, its moorings, within easy reach of Currituck, the game districts of the coast and the Southern Interior, all of which offer unsurpassed inducements to the devotees of rod and gun. We know that several yachts propose fitting out sooner than usual, with the intention of passing the chilly months of early spring in the more genial latitudes of Ham Roads; and we hope that in time the custom of vi-

grating southward will become as much a habit among yachtsmen here as the annual pilgrimage to the Mediterranean is among our British cousins.

NEW YORK YACHT CLUB.—The annual meeting of this club was held Feb. 5th at their club rooms, Twenty-seventh street and Madison avenue, New York. Commodore S. N. Kane presiding. The Commodore positively declined re-election, as he proposes to be absent in Europe most of the season. The following board was ultimately elected for 1880:—Commodore, William H. Thomas, *Rambler* schooner; Vice-Commodore, John R. Waller, *Davants* schooner; Rear-Commodore, James D. Smith, *Edelste* schooner; Secretary, Charles A. Minton; Treasurer, James O. Prouditt, *Mensur*, a Cary Smith; Fleet Surgeon, Alexander M. Fisher, M. D.; Regatta Committee, Daniel T. Worden, Chester Griswold and G. L. Haight; Committee on Admissions, S. Nicholson Kane, John R. Dickerson, F. W. J. Ingersoll, Robert Center and Charles H. Stebbins; House Committee, N. D. White, H. N. Alden, W. L. Hatch and J. H. Aston.

The committee having the subject in consideration reported in favor of abolishing the June regatta and turning over the expenses of same to a "cruising steamer" excursion before noticed in these columns. The club, however, disposed of the scheme by voting it down, and the annual regatta was fixed for June 10th upon motion of Com. Dickerson. It is also proposed to offer a special prize for first class keel schooners and the usual prizes for keel boats. It is fortunate for the club that the "revolutionary" intention of abolishing the regatta did not pass, or it would have been years before the club could have regained the loss such an ill-considered step would undoubtedly have inflicted upon it. A committee was also appointed—including Messrs. A. Cary Smith, Robert Center and Com. Dickerson—to reconsider the system of measurement in use and to recommend what changes it would be desirable to make.

EAST RIVER YACHT CLUB.—This is the name of a new club recently organized at Greenvale, L. I., with the following officers: Commodore, William Strevett; Vice-Commodore, Myron Clonard; Secretary, James Gerard; Treasurer, Edward Gussum; Sergeant-at-Arms, James Conway. The necessity for multiplying our small clubs is open to question. A dozen or so of open boats are not enough to constitute a club of strength or influence. It would seem that a consolidation of the smaller clubs is much more needed than anything else among the smaller "rigs" to promote their interests.

DRIFT.—Com. Voorhis is reported as building an iron steam cutter at Nyack, about 165 ft. long.—Jackson & Mathews, of Greenport, are building a new motor yacht for R. F. Dawson, M. D., S. Y. C. She is 48 ft. on deck, 17 ft. beam, and 4 ft. 3 in. draft without board. Will be named the *White Awey*.—J. O. Brown, of Tarrytown, has in hand a sloop 50 ft. long, 17 ft. beam, and 5 ft. 2 in. hold, for Mr. W. W. Thompson, of New York.—Toronto parties are about to build a 5-ton cutter, most likely in Coburg, Ont.—Hereschoff, of Bristol, is building a s. s. yacht for Mr. Graham, of Baltimore. She is 120 ft. long, 16 ft. beam, and 5 ft. 6 in. hold, and is to have a round cabin. The Hereschoff Manufacturing Company is also busy with several torpedo launches for foreign governments, and with building their coil boilers.—Samuel Holmes, of 123 Front street, has got out the specifications for a couple of steamers, 140 x 25 x 10, for the coasting trade, and they are now in the market. They will be fitted with compound engines, 20 and 25 in. cylinders by 24 in. stroke.

THE CANOE CONGRESS.—Mr. H. H. Bishop writes that he is in full correspondence now with all sections of the country, and that the success of the Congress seems assured. Mr. Jonathan Darling, of Lowell, Me., informs us that he proposes to be present with some of his birch-bark canoes and that he will bring along some Penobscot Indians as experts. Contemporaries, by the way, should not get the Canoe Congress mixed up with any rowing events on Lake George. It is a separate affair altogether, and requires no bolstering up, nor do canoeists propose to be made the tail-end to any rowing regatta. The racing of the Canoe Congress and the proposed National C. C. has been fixed for Aug. 3d, 4th, 5th and 6th, with headquarters at Caldwell, Lake George.

NATIONAL YACHTING ASSOCIATION.—A general meeting of all the delegates appointed will be called for March 1st, at the St. Dennis Hotel, New York. Circulars to this effect will be issued. Yacht clubs situated at a distance should make arrangements to vote by proxy, if their delegates cannot attend in person. The results of the meeting will be forwarded to all clubs participating, before being finally adopted. Clubs can join the movement at any time by communicating with the Secretary, Mr. John Frick, Post-Office Box 2070. If any club has failed to receive the circulars of the Association, it is because its address was unknown to the Committee.

THE PAST YACHTING SEASON.

Editor Forest and Stream.—

In this week's issue I am I am pulled up rather sharply by a correspondent hailing from the happy yachting grounds of Halifax, and whose non de plano happens to be the name of a crack sloop in that locality. He corrects my statement that the non-starting of the Sweepstake race fixed for the 23d July, in which the *Hebe*, *Peirce* and *Secret* (sloop) and the *Seafarer* (schooner) were entered, did not cause "some heart-burning." Almost synchronously I have received a communication from the referee on that occasion, enclosing the original "articles" under which the race was to be sailed. From this document I perceive that I was "misinformed" when I stated that this race was to be "pay or play"—a statement which I made on the faith of information received from a Halifax correspondent.

The articles do not, however, contain such a proviso, and its absence of course causes my remarks to fall to the ground in all save as regards the "heart-burning," which was touched for very plainly by my correspondent's informant—one of the Corinthians engaged in the race. I have no hesitation in apologizing to the referee, Mr. Passow, whose reputation as an upright and conscientious man equals his fame in Nova Scotia as a yachtsman. I had not the least intention of wounding his feelings, but could draw the only conclusion from the facts, as I then believed them to be, namely, that he ought to have started the race. As it was not "pay or play," and the pilots did not seem disposed to go, or rather the pilots did not seem to have any objection to not act otherwise. Where the mistake lay, in my opinion, was in not inserting the "pay or play" clause, which should govern such matches.

In writing my review I had purpose to trust, at times to information obtained from others, and much regret that in this instance the result should have been to unjustly, although unwittingly, reflect upon a gentleman deservedly held in high respect.

ROBERT CHASE.

HINTS ON CANOE BUILDING.

Editor Forest and Stream.—

It may interest a few of your many readers to have an actual builder of canoes detail how the thing is done, and if others will follow my example, canoeists may be better able to select such canoes as in model and make-up are best suited to their wants.

First, the model. [That of which I build most of is a modified type of the "Rob Roy"—the same in length and breadth, but having much more "bearings," more depth, and more camber or curve of deck than the original canoe of that name—therefore more roomy, more steady and capable of carrying more sail. Any good builder can, however, make to order to any dimensions given, and in length, depth, beam, sheer, tumble home, or camber of deck, can come within a fraction of an inch, if need be. We can, therefore, lay aside model and proceed, or rather we will take the above-named model as a sample, and describe the construction of such a boat.

The first step is the same as in building an open boat of similar dimensions. Keel, stem and sternpost are got out, and placed on the "forms," and securely fastened there. Next the siding of one-quarter inch cedar, six strakes on each side, is fitted—got out to pattern—and put on. I use a copper nail, spacing the distance with care and nail two inches apart. Now, the shell—for it is but an egg-shell—is taken off the forms or mould, and painted inside. When dry, the ribs of red elm, 1x4 inch, half round in shape, are put in one and a half inches apart, nailed on every lap, and to the keel with copper nails, well clinched. Care is taken to have the nails come exactly between those which hold the siding only, so so that they are at an even distance of one inch apart the entire length of the canoe.

Bulkheads of cedar are now carefully fitted, three feet from each end. Here, the jack-knife carpenter is the best man on the job. Deck timbers of sawed cedar, 1x1 inch, four-inch curve, all of one pattern, are put in about one foot apart, and the combing 1x2x4 inches may be more or less at pleasure, of three-eight red elm, with bent corners, is secured to its place—the ends fastened to deck timbers, and the sides strengthened by small oak knees. The mast sockets and steps are next fitted, according to the rig to be used.

The canoe is now painted two more coats inside, including deck timbers and the end compartments carefully tested, to be sure they are water tight. Next, the deck of cedar or pine, three-sixteenths of an inch thick, is put on, for which purpose some three hundred live-eight inch screws are required. The combing and mast sockets are taken out, and rasp and sand-paper used on the deck until a smooth surface is obtained, after which it is primed over, and the holes made by the screw-heads filled with putty and again sand-papered. It is now ready for its covering of cloth, which should be of the best and strongest bleached cotton. This is laid on in fresh paint, drawn very tight, and lashed along the outer edge of the siding. At the man-hole it is cut out and tacked over the inner edge of the timbers supporting the combing. The gunwales are now put on, the mast sockets and combing replaced, and such other work as hatches, lock-board, stretcher, etc., made, and the trimmings fitted, but not permanently put on as yet.

The canoe is now ready for its final visit to the paint shop. First the deck is primed, and the under side of it is painted two coats. In from three to five days it gets a coat of "rough stuff," which requires five days in which to dry, when it is rubbed down with pumice stone. This is repeated from three to six times, or until it is as smooth and hard as ebony. The number of coats needed will depend much on how well the wood workman has done his part. It now gets the three coats of color, and the siding the same, or if finished in oil, the siding receives one coat oil, one shellac and one of varnish. A coat of rubbing varnish is next, on deck. After this is rubbed down striping and gilding is in order. On another coat of each of these varnishes. Put on mast plates, clots, etc., and your canoe is ready.

Six weeks' time is the very least in which such a canoe can be turned out, and double that time is much better to make a perfect job. The object of covering the deck with cloth is that it prevents splitting in the sun, and makes it absolutely water tight. Such a canoe without trimmings, will weigh about sixty pounds, and in that condition cannot be sold below seventy-five dollars. Of course, good, serviceable canoes can be built for half that sum, if desired, but the coach roof finish to the deck will not be included.

As you have already given us an article on "Hips," from the very able pen of Commodore Chase, of the J. C. C. J. I need not trespass further on your columns.

C. H. KUSHTON.

YACHTING IN THE WEST.

Editor Forest and Stream.—

I take the liberty of correcting your list of winning yachts justice to Robert Brand, the builder of the yacht *Carrie Morgan* of Lake Winnabago. You set enroll her with the *Neenah* Yacht Club, which she should have been the Oshkosh. She is owned by Geo. W. Burnell, Commodore of the Oshkosh Yacht Club. You also give her credit of having won three races out of four, while the fact is she has won first money in five out of six. The yacht *Carrie Morgan* came out in the spring of 1878. She is 25 ft. keel, 9 ft. 6 in. beam and 3 ft. 6 in. draft, and draws about 2 ft. 6 in. in ballast and spreads about 65 square yards of standing canvas. The first year she won three races out of five, and five out of six the next year, making out of the eleven races sailed eight first prizes won. The first prize won by her was on the 23d day of August, 1878, beating the famous yacht *Nobie* in a twelve-mile race by 1 in. 23s. She also owns the Lancaster prize, which she was obliged to win three consecutive times against the combined fleet of the lake in order to hold it, and also carries the champion pennant of the lake. Lake Winnabago, with its fleet of yachts, is a source of much pride to our citizens and an object of much pride by strangers. We have the finest fleet west of New York consisting of about sixty craft—schooners, sloops and cuts. Among the most noted are the *Carrie Morgan*, *Nobie*, *Pontiac*, *Myrtle*, *Myra* Bell and *Mercadia*—the *Pontiac* having won first money in nineteen races and the *Nobie* in twenty-two. The latter in a regatta at Geneva Lake in the summer of 1877 beat the celebrated yachts *Geneva* and *Whisper* (formerly of New York Y. C.), and afterwards at Madison again beat the *Geneva*, winning \$100 in gold. The *Geneva* and *Whisper* were both built by the well-known builder, P. McGillivray who enjoys the reputation of being the fastest builder in America. In every instance wherein yachts of Eastern build have been brought in competition with those built by Brand, they have met with the same fate.

In conclusion I would say that Lake Winnabago, for yachting, fishing and other like sports, such as camp life and cruising, is unsurpassed by any in the United States, and parties seeking such recreation can do no better than come here and spend a summer on its shores. Owing to the constantly increasing number of visitors there is also an excellent opening here for a hotel.

Oshkosh, Wis.

SOMETHING ABOUT TRESPASS.

The law of trespass is of constant interest to sportsmen, who are perhaps more liable than any other class of men to unwittingly offend against its provisions. The last quarterly report of the State Board of Agriculture of Pennsylvania contains an article upon this subject, from which the following points are drawn by a local paper:—

Trespass is defined as "any transgression of offense against the law of nature, of society, or of the country in which we live, whether it relates to a man's person or his property." This is its widest meaning. Ordinarily, however, it has reference only to an entry on the property of another without authority, and in doing damage while there, whether much or little. The law gives the owner exclusive control over his property. Any infringement of his rights without his permission, or justified by legal authority, therefore constitutes a trespass. It does not need that the land should be inclosed by fences. The law supposes an imaginary inclosure, which answers every purpose, and the simple act of passing it constitutes trespass, although no harm should really result to crops, cattle, or aught else. Even a person legally authorized to seize certain goods on a man's premises dare not break open doors for that purpose; if he does, his authority avails him nothing and he becomes a common trespasser. Neither is a person justified in so arranging spouts as to discharge water on another man's land, even though he never steps off his own grounds; nor is he permitted to pass a boundary line without due permission. When a spout first discharges on a man's own premises and the contents then find their way to a neighbor's premises it does not constitute a trespass.

Hunting and fishing, however, constitute the most common and annoying sources of trespass to which our farmers are subjected. Custom has induced some people to believe they can hunt or fish on the lands and waters of other men with impunity. Nothing is wider of the fact than this. Because there can be no property in rabbits, quail, squirrels, pheasants and other feral birds and animals, they think these may be pursued whenever they may be discovered. It is hardly necessary to say that the same laws governing trespass in other cases prevail here. No matter that neither grass nor grain are trampled down, whether gates are left closed, bars left up and no rails broken, the pursuit of such game on the lands of another without permission is trespass. To even enter an unclosed piece of wood, to go to game, which may have taken refuge there, is a violation of law—quite as much as if a wheat field in ear had been trampled down. Fox hunts, which are again becoming common in certain sections of this and the neighboring counties, are all in violation of law, and the farmer whose acres are run over by the hunters without his sanction having been previously obtained has recourse in the law against the sportsmen for trespass.

—The organette is one of the most ingenious musical inventions of the age. Those who are musically inclined will find this little instrument a never-failing source of amusement. Read the advertisement elsewhere and write to the manufacturer for a circular.

KEEP'S SHIRTS

ARE THE VERY BEST.
KEEP'S PATENT PARTLY MADE SHIRTS, only plain seams to finish, 6 for \$7.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the

Grand Traverse Region
and the Michigan Woods are unsurpassed,
if equaled, in the abundance and great variety of
fish contained.
—
BROOK TROUT abound in the streams, and
the famous AMERICAN GRAYLING is found
only in these waters.
—
The BROOK Trout season begins May 1 and ends Sept. 1.
The GRAYLING Season opens June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUS-
CONE, also abound in large numbers in the
many lakes and lakelets of this territory.
The sportsman can readily send trophies of his
skill to his friends or "club" at home, as ice for
packing fish can be had at many points.

—
DURING THE SEASON, TRIP TICKETS TO YOU. The scenery
of the North Woods and Lakes is very beau-
tiful, the air is pure, dry and bracing. The cli-
mate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.
The hotel accommodations are of the highest
quality, and the average in countries now enough to
afford the finest of fishing.

During the season, Round Trip Excursion Tickets
will be sold at low rates, and attractive train
facilities offered to Tourists and Sportsmen.
Boys, Guns and Fishing Tackle Carried Free of
owner's risk.

It is a pleasure to make sportsmen feel "at home"
on this route. For Tourists, Guide and upland

RIFLE, SPORTING AND BLASTING
POWDER.**

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1822, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE RIFLE.
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING."
FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and true.

SPORTING, MINING, SHIPPING, AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Carriage, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.
N. Y.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

**THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.**

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 2 1/2 lbs. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 1 1/2 lb. canisters and 2 1/2 lbs. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFGG, and "Sea Shooting" FG in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 1 lb. FFG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and true. The FFG and FFGG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANON AND MUSKET POWDER, also SPECIAL GRAIN FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or by enclosing our order to

THOMAS MANNING, Broker.
EDWARD A. FLINT, Consulting Engineer, Boston, Mass.
CHAS. L. PERKINS, of Perkins & Choate, Bankers.
J. BAKER, Vice-President of St. Louis and San Francisco R.R., St. Louis, Mo.
BENJAMIN G. ARNOLD, of B. G. Arnold & Co.
HENRY M. TABER, of C. C. and H. M. Taber.

This Company has been organized to meet a pressing want, both in this country and abroad, viz., that mining properties offered to the public shall have the guarantee of responsible parties that they have received the most thorough investigation and examination by competent and reliable engineers employed by them specially for that purpose, and the assurance that the property is yielding, and should continue to yield for many years to come, regular dividends to investors, from the actual earnings of the Mines.

The names of the officers of this Company afford ample security that what is promised will be certainly fulfilled. To avoid the possibility of personal liability, or assessments, all organizations promoted by this Company will be based on a nominal capital, far below actual value and subscription price, and the forms, etc., adopted will be under the most eminent legal advice.

The first property offered by the Company, with its full indorsement and recommendation, is the

Spring Valley Hydraulic Gold Company,

situated in Butte County, Cal., and consisting of two of the best gravel deposits in the country, with an ample supply of water and a complete system of reservoirs and piping for working same. One of the properties forming the consolidation in the last seventy days' work cleaned up \$80,000, all the earnings will be largely increased under the present organization.

All the reports on this property indicate that dividends amounting to a large percentage on the subscription value can be regularly maintained for a very long period.

A contract for fifteen years has been made with Professor Edison, which will give a handsome return from the tailings, which have heretofore been wasted.

Officers and Directors of the Spring Valley Hydraulic Gold Company:

CHAS. M. FRY, Pres. National Bank, New York.
A. POSTER HIGGINS, U. S. Lloyd's Marine Ins.
R. M. PULSFER, Proprietor Boston "Herald."
JAMES W. RHODESON, Agent American Express.
EDWARD BATES DORSEY, Mining Engineer.

Volume 14—No. 3.
[No. 111 Fulton St., New York.]

Notes From Northern Texas.

FROM Gainesville I sped back to Denison. While writing from the latter place I forgot to mention the hide and peltry houses which I visited. They show a very various game. Besides the skins of cattle, they show those of buffaloes, bears, deer, antelope, wolves, panthers, wild cats, coons, peccaries, beavers, otters, civet cats, squirrels, skunks, jaguars, etc. I never saw such variety of skins anywhere else in Texas, except Gainesville. This would leave the unsuspicious to think that these animals are more numerous in this region than other parts of Texas. But this does not necessarily follow. This great variety of skins is due to the nearness of the Redman. He is by nature a hunter, and it is hard to make anything else out of him. These various hides are the fruits of his bent of nature, as well of his necessities. The Texan never thinks of skinning a skunk, peccary, wolf, or panther. Their hides are left to rot with their bodies. The Indians are more provident in their way, saving everything that has any value. They must have a rare time of it in skinning a skunk or a peccary. I judge that beavers are very numerous in the B. I. T. (short for Beautiful Indian Territory), for their skins are in these stores by scores and hundreds. To the Indian must not be credited the buffalo skins. These are brought in by the Texas cow-boys, who play sad havoc with the buffaloes when they come down, saving nothing but their skins. This year the crop of these hides is small. Not astonishing, since a year or two ago more than 200,000 of these animals were destroyed in Texas. A few years more and the buffalo will have taken his departure. We can't save him. Congress may pass laws to that end, but they will be in vain. Unless a company of cavalry accompanies every herd of buffaloes as an escort, how can you keep the cow-boys from slaughtering them and reveling in the slaughter? Can't be done.

In Denison I found a gentleman who had a young buffalo bull in his yard. I asked him if he thought the buffalo would make a cross with the domestic cow, or had any knowledge on that subject. He said he had never himself witnessed any experiment in that line, but had been told by one who claimed to speak of his personal knowledge that it would not succeed, as the cow impregnated by a buffalo bull lost her life in parturition. He said this was by reason of the "hump" imparted by the bull to his offspring. Buffalo cows are humped but little. How would it succeed with the domestic bull and the buffalo cow? I think the experiment ought to be tried. I believe it would improve our beef both in quantity to the carcass and in quality.

From Denison I rode south to Sherman, nine miles. It has 10,000 people, and is surrounded by one of the noblest countries in the world. It is good for wheat, corn and cotton, which are all grown on the same farms. Country generally a rolling, black, waxy prairie, resting on a soft limestone of the Tertiary age. Sherman would be pretty if its streets were paved. Built on a black, waxy prairie, in rainy weather it can beat creation for mud. The people are a good class. Americans for the most part, who seem to be about equally divided between North and South. They live in perfect harmony, as completely blended together as it is possible for a people to be. It is an every-day thing to find a "boy in blue" married to an ex-rebel girl, and a "boy in gray" married to the "boy in blue's" sister. I think the Northern element preponderates in numbers. It is a progressive and prosperous community. This may be classed as Northern Texas, which I have seen on this trip. When the railroads push on further west, Sherman must necessarily lose some of the great trade which she draws from that direction; but in spite of this she must always be prosperous. She can keep fat on the great country around her, and grow fatter as this great country increases in population and wealth, which it is rapidly and steadily doing.

McKinney is about thirty-five miles south of Sherman, on the Houston and Texas Central. It is a place of about 2,500 people. The country in which it is situated is said to be the richest in Texas. It is said that there is not a foot of poor land in the whole county. As far as I have been able to observe this is certainly correct. The land is the same black, waxy sort, resting on a soft magnesian limestone, which is here called the "white rock." This stone is a marl, and is easily cut by the plow when it comes near the surface. The English would call it "corn-brush." Where this rock comes near the surface

wheat does not grow merely, but luxuriates. It spreads itself. For cotton the deeper bottom lands are preferred. This country is very beautiful; rolling prairies covered with wheat fields and clustering houses. There is plenty of timber for useful purposes, but it is confined to the bottoms. Land is high priced here—from \$10 to \$50 an acre, and very little to be had. The people seem to be mostly Kentuckians. They are powerful and muscular for the most part, with something of an appearance of roughness, but their ladies are very pretty and winsome. I can't help but think that these tremendous fellows ought not to have such dainty and sweet little ladies. They should have gintesses. There are many gentleman sportsmen here. Their game is principally quails, chickens, curlews, etc. They are taking an interest in FOREST AND STREAM, and a bookseller has largely increased his order for the paper in the last day or so. While speaking of the somewhat roughish appearance of some of the men, I had no reference to manners; simply to the dresses and an honest sun-burnt complexion. But the men who run farms cannot be expected to look all the time like a Dandy Dimmont, nor is it desirable that they should so look.

If I could find something to criticise and abuse I would do so with some pleasure. I rather like satire, and need only a small amount of indulgence in it right severely. But as yet I seem to have no showing.

From McKinney to this place is about thirty-five miles south on the Houston and Texas Central. They claim a population here of 20,000, and this claim seems not to be exaggerated. It has postal delivery and is the metropolis of north Texas. It has the aspect of all new and unfinished cities; that is, it has a great many handsome buildings scattered over its wide space, and a great many poor buildings flanking the fine ones on nearly all sides. If the fine buildings of Dallas could all be gathered together and placed alongside and in front of each other, it would make a very respectable city in size, and of much beauty. In the meantime, if all the rattle-traps and shanties were clustered together, Tinsbuctoo, I fancy, would be rivaled if not excelled. The shanties are disappearing and good buildings taking their places, but they are so numerous that it will take this process a long time to wipe them out. Yet Dallas is liable to take a tremendous start upward at any moment; in which case the shanties now existing will vanish like magic. There are two great trunk lines of railway already here, one running north and south—the Houston and Texas Central, and the other east and west—the Texas and Pacific. Besides these there are the Dallas and Wichita, but some twenty-five miles to the northwest; the Dallas and Cleburne to the southwest, projected; and the Dallas & Southeastern, projected. Should these projected railroads be built or fairly started, there is no telling what Dallas might not be. This is a railroad building age; there is plenty of money lying loose, eager for profitable investment, and as money put in these contemplated railroads could not be otherwise than profitable, it would not surprise me at any moment to see them become lively institutions. Each and all of them would run through a region scarcely equaled in natural resources. The Texas and Pacific has recently waked up from a long rest and will be built 750 miles westward as quickly as money and muscle can do it. As it builds westward, hundreds of thousands of people will pour into this now almost unoccupied country, adding a new Empire to Texas, and wealth and power to Dallas. I candidly believe it to be the best place I know of to invest a little money. The country around it in every direction is a paradise of beauty, fertility and healthfulness. I do not exaggerate. I speak facts.

The only important manufacturing industry now here, is the flour-mill business; but the place is finely situated for almost every sort of manufacturing industry, whether of cotton, wool, leather, wooden, or other fabrics. The Trinity River skirts the town, furnishing plenty of water to be converted into power by fire. For the present, fuel is rather high. Wood is three dollars a cord, and coal is delivered in large lots at \$5 a ton. When the Dallas and Wichita Railroad is extended about forty miles further, it will reach a wood territory; and fuel will then be much cheaper. With cheap fuel it does not seem to me possible to prevent Dallas from becoming perhaps the most distinguished place in the Southwest. San Antonio may rival, and even exceed her after a while, since her natural capabilities are great; but this cannot be until she becomes the center of a number of railroads, and when this may be no one can tell. The soil around here is about the same as I have described in other portions of North Texas, and the people the same; that is, about half-savage Yankee and half-savage Southerners, with a smart scattering of Germans, etc.

A point that strikes me with great force here is this: That it is the finest point now in the United States for the building up of a splendid, money-making daily journal. The Galveston News, which has full sweep in every other portion of Texas, and deserves it, too, is here left out in the cold, for a paper published in Dallas can reach all North Texas from relative to twenty-four hours of the News. This gives the Dallas paper an over-

whelming advantage. On the other hand, the St. Louis papers are more behind than the News. Therefore a first-class paper here would be without competition, unless another should start under its shadow. The Galveston News has built up a large fortune, and a paper here as good as the News would build a larger fortune in a much shorter time, because it has a much larger constituency already provided and growing with great strides. This idea has struck me with such force, and haunts me so persistently, that in spite of my penchant to pass the rest of my days in quiet life in the country, I find myself strongly tempted to pitch again into the rough and tumble of daily journalism. How printing-ink does stick to a fellow's hands when he has once got it well on them! If some smart Yankee, with some money, who may read this, feels stricken with a similar weakness, let him write to me. We may club together and put a great ball in motion, which may well roll on, there's no telling how long.

Of course, I had to go and commune with the rocks here, as I do everywhere. They are tertiary limestones, but drifted cretaceous shells, belonging to the topmost strata of that formation, are numerous in the creek beds. During tertiary time all this country was filled with big turtles. Their shells are greatly abundant in the rocks. Here about Dallas some pre-Adamic fellow undoubtedly kept a great turtle ranch, and provided he had sale for his cattle, he was certainly very rich. When he wanted to catch one for market I suppose he went out and roped him, just as the Texas cow-boys do to-day do a beef. I am struck with the great quantity of drift which may be found in nearly all this country, where the cretaceous and tertiary deposits come together. It seems to have followed the course of the sea as it receded, forming a shingle sometimes many feet in thickness. I noticed this at Gainesville, covering the cretaceous deposits, also at Denison, and again here. Often it presents the appearance of a true drift, crowded with broken cretaceous rocks; at other times of an ordinary sea beach composed of rounded pebbles rolled up by the waves. The close of the cretaceous period of Jonaht was undoubtedly marked by some extraordinary turmoil of the waters. It looks to me like a thundering and furious flood had swept over the land and poured into the Eocene Sea. I can see no other way of accounting for these extensive and numerous piles of broken cretaceous rocks and clay. Since I come to think about it, I have seen in many other parts of Texas the unmistakable signs of great diluvial action at the close of the cretaceous. Next, Westward,
Dallas, Texas, Jan. 1880. N. A. T.

A DEER HUNT ON THE PACIFIC.

ONE fine sunny morning in September, with Tom W— and an Indian named Jimmy, I started to take a hunt; and in order to guard all the runaways we took two canoes, Tom and myself in one, and Jimmy and the other. The dogs we had were: old Jack, as good and true a dog in his day as ever ran a trail, but now through old age rather slow and not to be depended on for a second run, although keen and staunch when fresh; Fritz, a half-bred cross between a fox-hound and a spaniel, a good, steady, fast little fellow, but lacking the full melodious voice that is so pleasant to the ear of the hunter; Vulcan and Venus, two fine hound pups of the same litter, who at that time were just commencing their sporting education, and who afterward turned out as fine a pair as could be wished for by any one.

On arriving at the place where we intended to hunt, the dogs were turned loose and at once took to the woods. They needed no starter, each one seeming anxious to be the first to start the deer. The sound of this plan, on Buzzard Lake, is rough and broken, heavily timbered with hick, and there a small stream winding its way down the hills. Almost invariably the deer, when taking water, comes down one of these creeks, and a knowledge of their situation enables a person to anticipate, generally, where the deer is coming out. But a short time elapsed before we heard Venus giving tongue, then Jack, then Vulcan and Fritz—the latter's voice was a bark blended in contrast to the bell-like voices of the being strong in contrast to the whole of their voices others. In a few moments the whole of their voices fresh, and to this we attributed our not hearing him shoot. On turning the point judge of our astonishment at seeing all the dogs on the beach eagerly searching for

the trail, the Indian standing by his canoe, and no deer in sight. On accosting him he assured us that no deer had come in, and that the dogs had come out of the woods a short while ago. I at once made up my mind that he had been asleep and allowed the deer to get away, and subsequent information proved I was correct; but to make sure, we hunted the dogs up and down the beach half a mile each way to see if the deer had taken water and then came back on the same side—a favorite trick of does, particularly early in the season before they separate from their fawns but one rarely practised by a buck, who, if he once made up his mind for the opposite shore and goes there, unless frightened by a noise or turned by a boat. After giving the dogs ample time to find the back track to the woods, had the deer taken to the same side as we were on, and not being able to find any, I concluded our hunt for that day was at an end. I was not in the best of humor with myself or master Jimmy, being annoyed with him for losing the deer, and at myself for trusting to his watchfulness. I called the dogs to the canoe and prepared to go home, Madam Venus, however, was not satisfied with this state of affairs and jumped out of the canoe and made for the woods; neither coaxing nor scolding would induce her to come back. At length, when out of sight and perhaps out of hearing of my voice, we were cogitating whether to leave her and go home, or not, knowing she was safe, as she would go to one of the logging camps near by when through with her hunting, when we heard her burst forth in a manner that assured us she had started a deer, and was close enough probably to see it—so loud, frequent and angry were her utterances. This turned the tide of affairs, and shoving the canoe ashore, we let all the dogs go, and in a few moments all were in full cry.

Determining not to lose this deer if we had anything like a chance to get it, and cautioning the Indian to keep his eyes open the time we went below to watch the lower runway, and on arriving there, probably a half a mile below the upper one, and certainly not more than twenty minutes after the deer was started, on looking around we saw back of us a fine buck in the water. We wheeled the canoe around, and in doing so attracted the attention of the deer which turned and changing his course from right angles to the shore, commenced swimming away from us parallel to it. I saw he was likely to go ashore, and as the dogs had made two runs would probably refuse to make the third if this deer got away from us this time. Although a long way off I determined to make a shot, as he was rapidly nearing a point which would, as soon as he turned it, hide him from us. Besides my breech-loading shot gun I had a Ballard sporting rifle. I lifted the rifle and shot, but apparently missed. He turned at this and with a few strokes reached the shore and took a course up the beach. When he came to the Indian, Jimmy fired and missed him, but turned the buck back. Old Jack, who had come back to the canoe where the Indian was, now took after the deer. After running a short distance down the beach, the other three dogs, who by this time had come out of the woods, met the deer which, however, avoided them and kept on towards Tom and myself. A pistol shot I never saw, before or since, the deer ran yards ahead and the dogs close together, giving all the tongue they could. As the buck came opposite to me I lifted the gun to shoot, but dare not do so for fear of killing some of the dogs, so close were they together. At last the deer jumped a log and widened the distance, when I shot him in the head, killing him instantly. On cutting him up we found the rifle ball had entered a little to one side of the tail and entered the center of the body parallel to the vertebral column, lodging in the neck; but it did not appear to affect him in the least, or decrease his rate of speed. Although I have been at the death of many a deer, this was the most exciting hunt I ever took part in. The same afternoon a friend of mine informed me that the first deer we had run in crossed the inlet, and as a strong tide was running, was carried down some distance where it was killed by some Indians near their camp, and he had rarely seen as fat a doe as she was. MOWITCH.

Natural History.

BIRD NOTES FROM LONG ISLAND.

BY GEORGE LAWRENCE NICHOLAS.

[NOTE.—Our correspondent, Mr. Nicholas, has sent us a very interesting list of the birds observed by him during the summer of 1879 on and about Shinnecock Bay, Long Island. The list includes notes on 101 species, and contains no little valuable information. With our correspondent's permission we have made such selections from it as appear to be of the greatest ornithological interest and print them herewith.]

Sialia sialis.—Blue bird; very common. I have witnessed many a quarrel between these birds and the martins. The martins generally come off victorious, and the blue birds are compelled to resort to holes in trees, where they breed in great numbers.

Certhia familiaris.—Brown creeper. Saw a single specimen on the 20th of July.

Parula americana.—Blue yellow-back warbler. Saw a single specimen on the 14th of July.

Stercorarius ludovicianus.—Large-billed water thrush. Obtained a single specimen on the 31st of August.

Cotyle riparia.—Bank swallow. These birds are also very common, and breed in great numbers in the sandbanks. I took several nests containing eggs on the 6th of July. One of the nests contained a young bird, an egg nearly ready to hatch, and two perfectly fresh eggs. A number of the other nests contained eggs nearly hatched and fresh ones. From this I infer that the swallows at times get into each other's nest.

Progne purpurea.—Purple martin; very common; breed in vast numbers in the boxes put up for their use, and also in holes in trees.

Tachycineta bicolor.—White-bellied swallow; common. This bird, like the martin, breeds in holes in trees. They build their nests under the eaves of the barns and houses, and it is not uncommon to see the

eaves of a barn sheltering twenty or thirty of these nests and the nests of the cliff swallows.

Colaptes ludovicianus.—Logger-head shrike. Obtained a single specimen of a young bird on the 4th of August. *Tyrannus carolinensis*.—King-bird; common. While at the same place in the summer of 1877 I found one of these birds' nests, containing two eggs. I took one, and came down from the tree, and the bird came back, but left it again after being there about half a minute. On again ascending the tree I found that the other egg was gone. From this I think that the bird must have carried the egg to some place. [?—Ed.]—Jortalcorn; saw a single specimen in the latter part of August.

[Since this article was in type we have received from the author the following note with regard to this occurrence:—

Your favor of the 9th received, and I would say by way of reply that I am quite positive as to the identity of the jertalcorn (*Falco sacer*) which I saw. It was quite early in the morning, in a pine swamp quite near the bay. I first observed the bird perched on a tall dead tree; he afterwards came slowly up to where I was, not flying as hawks usually do, but flapping along much after the manner of a crow. He approached within about sixty yards of where I stood, and my companion, who was nearer to him than I, fired at him but failed to kill. I afterward observed him slowly moving over the marsh, and although I watched him until out of sight I did not see him sail as other hawks do, but he was continually flapping his wings. He perched often, and at one time saw him catch some kind of large snipe or curlew. I regret very much that I could not obtain it, and had such a short time to observe it, but from what I saw I am positive that it was none other than the *Falco sacer*.

In the absence of any more direct and positive evidence, we are inclined still to doubt that the bird seen was *Falco sacer*. It appears much more probable that it may have been *Falco communis*, a species which is known to breed in Connecticut and Massachusetts. By reference to Dr. Merriam's excellent list of the birds of Connecticut (Trans. Conn. Acad. vol. iv., 1877) our readers will observe that this species has been taken on Long Island Sound in June, and an occasional specimen might well be found on Long Island.—Ed.]

Orizyx virginianus.—Quail; very common; these birds are rapidly increasing in numbers; they come almost up to the doors in seeking their food.

Ereunetes pusillus.—Semi-palmated sandpiper; common in August. This bird is noted here in very large flocks. So abundant is it usually that a single discharge into a flock has been known to kill as many as one hundred. They are here known as the ox-eye.

Limosa fedoa.—Great marbled godwit; saw a single specimen. This bird is here known as the red marlin.

Totanus semipalmatus.—Willet; I had the good fortune to obtain one of these birds, which is almost pure white, having only a slight brownish tinge on the wings. The bill was lighter than usual. Its eyes were black, and the feet colored as usual.

Totanus solitarius.—Solitary tattler. This bird, I have reason to think, is quite rare here. I obtained but one specimen, and that none of the gunners of the bay could name.

Actitis bartramia.—Upland plover; quite common, but very wild. This bird is here known as "humility."

Macrorhamphus scolopacea (?).—This bird I obtained with another which was said to be the same, but I afterward found it to be a dowitcher (*Macrorhamphus griseus*). They were shot in the company of five dowitchers. The one which I am still in doubt about had a very strange note, being entirely different from that of the dowitcher; it was made up of several quick, sharp whistles. The length of the bird, taken from the crown, 8 1/4 inches, the bill over 2 3/4 inches long. I am quite sure that it is not a dowitcher, as it is quite different in color, the under parts being like those of *Tringa canutus*, and only the throat and sides under the tail being spotted. The tail when spread looks decidedly tawny. Mr. Lane, with whom I was staying, says that for the past three years he has seen these birds in company with the dowitchers, and that they seem to be increasing in numbers. He and the gunners of the bay say that they have never heard this bird give a note anything like that of the dowitcher.

RAVENS AND CROWS.

THE raven dwells mostly in the mountainous and rocky regions of the United States and British America, extending southward into Mexico. According to Prof. Baird they inhabit the entire continent of North America, but are rare east of the Mississippi river. See Pacific Railroad Report vol. ix, p. 560.

The raven is a rare bird east of the Mississippi, being seldom seen far away from rocky precipices and mountains. In botanical excursions among the mountains of the Southern States I have often seen and heard them, nor is their voice unpleasant to me, for it has been a frequent accompaniment of things which I love—mountains and lonely scenery. The raven dwells and breeds in the mountainous regions of Texas, from the mountains of Llano County northward to the Rio Grande and beyond into the mountains of Mexico. Beyond Fort Davis, on the route to Fort Quitman on the Rio Grande, in El Paso County, there is a noted camping place called the "Crow's Nest." Here there is a spring at the base of some perpendicular cliffs, in an inaccessible cavity of which the ravens have their nest. On a trip to El Paso in 1875 I saw this nest. Our party was large, and we always encamped at night. In the morning as soon as we started for the day's journey, and were beyond shooting distance from the camp, flocks of ravens went there to get the fragments of provisions we had left. In Texas the crow does not dwell in the region inhabited by the raven. In Texas north of Austin few crows are found west of the Colorado river, but they are increasing rapidly and enlarging their boundaries. An old surveyor who had surveyed and located much land in Western Texas told me that thirty

or more years ago in the latitude of Austin no crows were found west of beyond a few miles.

Audubon, appealing to the known generosity of the American people, says he "cannot but wish that they would reflect a little and become more indulgent towards our poor, humble, harmless and even most serviceable bird, the crow." But the crow is not poor, notwithstanding the old saying, "as poor as a crow." Blest with an appetite for both animal and vegetable food, nature provides bountifully for his wants, and he skillfully supplies them. Nor is he humble, for there are no birds more bold, arrogant and more than he; nor is he harmless, but a thief and robber. He robs the nests of other birds of both eggs and young, and this is one great cause why insectivorous birds are decreasing and crows increasing in many parts of the country. Here the crows destroy watermelons by going from one melon to another and picking small holes into them, as if testing each one, only making a hole just big enough to slip the melon. A near neighbor of mine who raises watermelons for market told me that the crows destroyed at least \$25 worth of his melons last year, and the damage would have been much greater had not the field finally been guarded by a man with a gun. This man said that he could not shoot any of them because one crow was always stationed as sentry to give notice of his approach. Crows are fond of pecans and acorns. The last fall they took most of the pecans in this neighborhood, more than usual being taken because a short crop of corn was raised and gathered early, leaving the crows without their usual supply.

Many years ago, when I was living in Northern New York, in Yates County, I could not find the nest of one of my turkey hens, and I knew she had been laying for several weeks. One day I watched until I saw her go on a house, and I then went to the house and up stairs to a window where I could see the turkey, and as soon as I saw her rise and begin to cover her nest with leaves I started, and when almost there a crow who had been watching also on a near tree flew down, darted his bill into the egg, raised his head and flew away triumphantly with it. There were no more eggs in the nest, the crow having carried them off as fast as I could. Audubon relates that he has seen them do the same thing with the eggs of wild turkeys. In Western New York they used to catch young chickens, and so they sometimes do in Texas; hence, for all these and many more sins, I dislike crows and would give them no protection.

Audubon mentions that a bounty was given by one State—he does not give the name—for the destruction of crows, and that 40,000 crows were there shot in one year, besides a great number of young ones which were killed in their nests, and also other old birds were destroyed by poisoned grain spread on the ground. My watermelon neighbor tried to kill the crows with poisoned corn, but they would not touch it. S. B. BUCKLEY.

Austin, Texas, Jan. 9th.

PASERCULUS PRINCES IN NEW JERSEY. *Philadelph. Pa., Jan. 30th.*—While gunning on the southern end of the Seven Mile Beach, New Jersey, December 30th, 1879, I took a female *Paserculus princeps*. I first noticed it flying in a flock of sparrow larks among the sand hills, and seeing that it was a sparrow different from any I had before met with, I followed up the flock and shot the strange bird while sitting on a piece of wreck. It proved to be an Ipswich sparrow, and on searching for others I came on one or two, but was unable to secure them. As I was only on the beach for about half an hour, I did not have much time to look for them, but have no doubt but that they were common among the sand hills. I believe this to be the most southern locality where this sparrow has been taken, its most southerly record being Coney Island (*Nuttall Bulletin*, July, 1877).

W. L. ABBOTT.

WINTER NOTES FROM IOWA.—Our correspondent W., to whom we have in the past been indebted for so many interesting bits of Natural History news, sends us from Coralville, Iowa, a few notes referring to the mildness of the present winter in that State. She says:—

Charles Hoover, of this place, shot a Wilson's snipe in this vicinity December 3d....On the morning of the 6th of January our ears were greeted by the sweet notes of robin red-breast....Several individuals report having seen flocks of geese passing northward January 18th.

MISSOURI ORNITHOLOGY.—We notice in the January number of the Kansas City *Review of Science and Industry* a pleasantly written article entitled "Peculiarities of Missouri Ornithology," by Ermine Case, Jr. The essay, though the information which it conveys is somewhat elementary, is written in a popular style, and is interesting.

ALBINO ROBIN AND BLACK OPOSSUM.—*Jacksonport, Ark., Jan. 8th.*—Two years ago I killed (one I think red, the other white) a paper-colored albino robin near here. The bird had the albino eyes, but the plumage, both the dark and the red, was evenly mixed in with white, alternating a white and slate-colored feather on back, a white and red on breast. Even the wings and tail were thus variegated. In my eagerness to secure the specimen I killed it at short range and could not preserve it. The appearance of the bird while alive was very striking. The appearance of the bird of this season is a perfectly black opossum (*Didelphys virginianus*), the skin of which I saw yesterday at the store of Mr. John McDowell, of this place. This may be common enough, but was the first for YELL.

NEW FLORIDA ROUTE.—A new steamer has been put on the Western Coast route of Florida. She is under the command of one George Greenleaf, and has a crew of 100 men to point below Homosassa, touching at all important and unimportant points, and with the good nature of the average Florida steambot, running up into all the creeks and swamps that may chance to attract the sportsman traveler's eye.

Fish Culture.

THE IMPORTANCE OF FISH CULTURE.

THE following extracts are from the speech of Hon. Levi P. Morton, of New York, before the House of Representatives, during the discussion of the bill to appropriate \$20,000 to enable the United States to be represented at the Berlin Fishery Exhibition:—

The production of fish is a source of national wealth, and in the early history of the world it was a preventive of famine and distress. Experience has shown that while it is a luxury of the rich it is preeminently the poor man's food. This is understood thoroughly in the countries where food production and cheap living are carried to the greatest perfection. It is estimated that about forty-five millions of Chinese subsist almost entirely on fish. It is not merely inland fisheries that are of importance to the poor. The sea fisheries are hardly less so. If properly developed, the price of fish would be so much lowered that the man who could not buy would be rare indeed, and so little capital is necessary for the business that there would be sufficient profit left to those who carried it on.

Other countries do not look upon fisheries as we do. One of these international exhibitions is being held at Bergen, Norway, in 1895, at which the fish of all the great countries and many of the lesser ones were well represented. Insignificant Bavaria sent 93 contributions; Great Britain, 174; Sweden, 363, and Holland, 435. How many came from this country? One! Another exhibition was held in France in 1866, and our fish were not presented at all.

The French government has given so much material aid to this business of fish culture that nearly all her waste waters have been turned into nests for the propagation of fish. One of the earliest and most extensive establishments for the culture of fish is that erected by France at Huningen, which went into operation in 1852, and in six months had artificially fecundated 3,000,000 eggs and produced 1,600,000 living fish.

It is only necessary to call the attention of the public to the subject for it to appear that there is not a State which has not interested in the matter.

Mr. Chairman, not many years ago the vast internal improvements of this country—the erection of mills, dams and factories—threatened the extinction of the most valuable species of fish in our rivers. This calamity was prevented by the timely discovery of the art of propagating fish by artificial means, and at the same time the demand was greatly increased through the aid of canals, which made transportation easy between remote points in a brief time.

In 1840-50 salmon cost twenty times the price it commanded when we ceased to be colonies of Great Britain. The Connecticut River, which had been one of the most fertile fish streams in the world, became almost depleted. Few, however, understand the methods of replenishing our waters from which the most valuable species of fish have been banished. This result is due to a discovery made in Germany, and afterward in France, that fish can be propagated to almost any extent by artificial means. This simple fact has led to the creation of one of the most important industries of modern times. The nations of the world have derived incalculable benefit from this discovery, and we are now invited to join in an international comparison of the character of our fish and the methods of our fish culture. It is to this science to which I have referred, and which this resolution is designed to encourage and extend, that we owe the restocking of our waters; to this we owe the fact that millions of young shad were hatched at Holyoke, Massachusetts, and turned into the Connecticut River.

In view of the possibilities of our shores, our measureless streams and our inland seas, we should lead all nations in the world in regard to the production of fish. Information on a subject of such importance to our people and their industries. The annual value of salmon alone in Ireland is now about \$2,500,000, while in this country it averages from thirty to forty cents a pound. The oyster-beds in Virginia alone cover an area of about seventeen hundred thousand acres, containing about eight hundred millions of bushels.

It appears that in 1874 Norway and France, each smaller than some of our States, produced respectively one-third more fish than the United States. In 1863 the tonnage of American ships engaged in the sea fisheries amounted to 204,197; in 1874 it had fallen to 78,390 tons.

In the fish trade in 1885 Norway had a balance of trade in her favor of \$12,588,975. Why was this? Because she resorted to fish production as it is proposed the United States should do. In this connection the United States Fish Commissioner again says:—

"Norway is the only European nation that has a scientific commission occupied officially in the supervision of the fisheries, and in devising methods by which they may be carried on and extended with the least possible waste. To the labor and observation of such men as Dr. Boeck, Professor Sars and others, is due much of the present efficacy of the Norwegian fisheries."

In 1867 we imported about as much fish as we exported. If we devoted sufficient energy to the business we could export one hundred times as much, and need import none at all.

Fish culture is in its infancy. Its resources are immeasurable. It may approximate and even rival agriculture in importance. Its development will give employment to thousands of men and bring food within the means of the poor as well as of the rich. The propriety and utility of international exhibitions, where the representatives of our nation can learn the nature of the products of the others as well as show its own in a universal market, can no longer be questioned.

Washington.—Prof. Baird appeared before the House Committee on Appropriations Feb. 17th and requested that an appropriation of \$12,000 be made to furnish a fish-hatching steamer to be employed along the coasts of South Carolina and Georgia, and also to destroy the Secretary of the Navy to be empowered to detail an officer of the navy and sufficient number of seamen to man the vessel.

PROTECTION TO POTOMAC FISH.—Washington, Feb. 16.—Mr. Samford, of Alabama, who is a member of the House Committee on District of Columbia, has introduced a bill for the much needed protection of fish in the Potomac River within the jurisdiction of the District. It provides:—

That it shall not be lawful to fish with fyke net, pound net, stake net, weir, float net, gill net, hand seine or any other contrivance, stationary or floating, in the Potomac, within the district of Columbia, after the 30th day of May in any year. That during the fishing season, viz: From the 1st of February to the 30th day of May, in every year, there shall be observed in each week a closed season, beginning at sundown on Saturday evening, and ending at midnight on Sunday night, during which time it shall be unlawful to lay out any hand seine or float net, or fish the same, and all seine-boys and the leaders of all hedge ponds, fyke nets or weirs shall be lighted clear of the water, so as to allow unobstructed passage to the fish: *Provided*, That in the case of weirs it will be sufficient to remove a section of the hedging net the pond or pen, not less than twelve feet in length. That it shall be unlawful for any person to take in any other manner than by angling or with the out-line, any fish of the species known as "black bass" or "salmon." That it shall be unlawful for any person to have in possession or expose for sale in the District of Columbia, after the 30th of May in any year, fish of the shad or herring species, fresh, under a penalty of \$5 for every fish so exposed or found in possession, that any person who shall offend against any of the provisions of this act shall be deemed guilty of a misdemeanor, and upon sufficient proof thereof in the Police Court shall be fined not less than \$10 nor more than \$100 for each offense, and shall forfeit to the District his boats and other apparatus, which shall be sold and the proceeds of such sales and all fines accruing under the act, shall be paid into the Treasury, and therefrom to the informer, in each case where conviction ensues, shall be paid the sum of \$2. *Provided*, That nothing in the act shall be construed to prohibit angling or fishing with the out-line, or to prevent the commissioner of fish and fishing or his agents from catching from the waters named in any manner desired, fish of any kind for scientific purposes, or for the purpose of propagation.

HATCHING TROUT IN A CELLAR.—*Eagle's Nest*, Feb. 10th.—And now a word about a trout enthusiast in Stamford, New York. John N. Bennett is the man. He has now five line trout ponds well stocked with various sizes. Only last spring he lost over three thousand nice trout, many of them large, through the filthy drainage of a creamery on the stream which supplies his pond; but that has been remedied by more care at the creamery and a grated filter of ten feet depth at the inlet to the ponds. And now, in the depth of winter, with the thermometer much of the time below zero, Mr. Bennett is hatching trout in his cellar in a most ingenious and interesting way. He pumps water from his well into a barrel, and through a small pipe lets it run into a box constructed on the principle of the Holton hatching box. Heuses about one hundred and fifty gallons of water in twenty-four hours, and has succeeded in hatching seventy-five percent. of the eggs taken. He took the eggs from trout in his own ponds. The eggs taken on the 14th of November commenced hatching Jan. 24th, temperature of water kept about 43 degrees. The fry are lively and doing well.

Now this is also winter indoor angling, and perhaps next winter some more readers of the FOREST AND STREAM will try it. Mr. Bennett is one of our subscribers, and as earnest in fish worship and fish culture as Seth Green himself. NED BUNTLINE.

LIBERATING FRY.—*Miramichi*, Feb. 12th.—An article in FOREST AND STREAM of 6th inst. leads me to ask through you whether it does not occur to your fish culturists that the proper time to liberate artificially propagated fish is a week or two before they are to liberate themselves from the ova? Have any of your readers interested in fish culture tried the experiment of depositing the eggs on natural spawning grounds, and watched the result? There is an opinion held by many who know something of the subject that much better results may be obtained by disposing of the ova in the way suggested, than by keeping the young fish until they are familiarized with objects which, in their natural condition, would frighten them into seeking protection, and consequently become easy prey "to the almost innumerable finned, winged and furred enemies seeking to devour them." W. G. S.

NEBRASKA.—North Platte, Feb. 4th.—I was commissioned by our North Platte Sportsmen's Club last week to go for 5,000 salmon fish, which the State of Nebraska have been stocking their streams with to plant in the waters of some of county streams, which we did; and will put in bass and trout in their season. W. W. C.

—In the Salinas, or salt marshes, near Cadiz, Spain, a peculiar kind of crab abounds, of which the hind claws are considered a great delicacy. These are pulled off from the live crab, which is then set free to develop another pair.

—Efforts are to be made to secure the enactment by the Texas Legislature of some laws for the protection of fish. The only enactments now in force provide for the construction of fishways and prohibit the use of nets and traps between Feb. 4th and June 14th.

—The United States Mining Investment Company will be hailed with satisfaction by a great many of our Western friends who have an eye to the golden opportunities the untold wealth yet hidden in the "Rockies" is bound to afford. The hunter and trapper and the sportsman on a tour often meet with the chance of picking up some "prospect hole" for a more song and developing what was a "location" pure and simple into a promising mine. When they seek to float their lucky ventures, no quicker or surer method can be found than to obtain the official indorsement of the United States Mining Investment Company.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.	
Pompano, <i>Trachinotus carolinus</i> , Drum (two species), Family Sciaenidae.	Grouper, <i>Epinephelus nigricatus</i> , Trout (black bass), <i>Centropomus</i> <i>undecimalis</i> .
Knifefish, <i>Meuschenia nisholsi</i> , Sea Bass, <i>Siganus crenatus</i> , Sheepshead, <i>Archosargus probato-</i> <i>cephalus</i> .	Striped Bass, or Rockfish, <i>Morone</i> <i>viridis</i> , Black Bass, <i>Morone saxatilis</i> , Black Bass, <i>Micropterus salmoides</i> .
Red Snapper, <i>Lutjanus blackfordi</i> .	

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotels and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

SNARING AN ALLIGATOR.

IN my last I detailed the efforts made to snare a deer and the results attending, which efforts led to the following exciting adventure.

Our stay in the section referred to was protracted into the summer, and we spent much of our time fishing. We were truly in an angler's paradise. Two miles back of us was the W—River, with numerous large creeks emptying into it. Six miles west of us was the bay into which the W— and S—rivers emptied, making a very commodious harbor. In front of us, five or six miles away, was the Atlantic, with numerous small inlets and numbers of small islets. Fish of every description was abundant, and it may well be believed we enjoyed ourselves to the utmost. Our most serious drawbacks were snakes and alligators, and so numerous and so ugly were these that till this day the cold shivers creep down my back when I think of some of our narrow escapes from these venomous and disgusting reptiles.

One day we had been fishing in one of the "reserves"—an immense body of water reserved to flood the rice fields—and had found small snappers and alligators particularly numerous, so much so that they became almost our sole topic of conversation. We had shot large numbers of them, so many, indeed, that we failed to extract any further interest from it.

While we were talking, one of the party said: "P—, why don't you and Joe snare one of these 'gators? Your success with the old bucks warrants you in trying your hands."

A laugh followed, as it always did at any mention of our deer escape.

"What say you, Joe?" I asked, when the laugh had subsided.

"We can do it," he answered, "and if you say so, we will."

Of course I assented at once.

When we reached home we began to discuss ways and means, and in the course of the next few days we rigged up the following contrivance: we procured a strong seven-eighths manilla rope, forty feet long, a small halter chain (twisted links), eight feet long; and a piece of well seasoned hickory. The latter we cut to a length of eight inches, leaving the diameter one and a half inches, and bringing the ends down to a long sharp point. At the center we grided it with a quarter inch groove, leaving the diameter still one inch. We now repaired to the blacksmith, and had him forge a link three inches long of quarter-inch iron, one end of which we slipped into the groove on our stick, and then putting the halter-snap in the other end we put the center of the link into the vise, giving it a severe nip, bringing the sides of the links together, and securely fastening the stick of wood to the link. At the other end of the chain our rope we fastened. Our snare now had the appearance of a cap T with the upright stroke very much elongated. We now procured a ten-pound chunk of beef, into which we securely wattled the piece of hickory, and then, bringing one end of the stick parallel with the chain, we fastened it there with a bit of yarn.

Repairing to the reserve we selected a spot, secured our rope to a pine tree growing near its edge, and then by the aid of a canoe we carried the bait out as far as the rope would permit. To insure the floating of the bait near the surface of the water we laid the rope across a five-foot strip of plank. Everything completed, we retired to await developments. Early next morning we were at the reserve, and there, sure enough, we had a "gator" fast, and judging from the muddy condition of the water it was a whopper, and had been there some time. The rope was moving through the water in quite a rapid manner, and without unfastening it we made a pull with all our strength, but we might as well have tried to lift an elephant by the tail. The question now was what to do with the chap since we had him, and in order to solve it the whole party were invited into the discussion. After much talk it was suggested and agreed to that we make use of a small wagon and a pair of mules belonging to the party. I went for the team, and in my haste did not take time to put the body on the wagon, it having been removed for the purpose of hauling wood. Hastily throwing a plank across the bolsters, I seated myself and drove over to where the party awaited me.

The rope had been secured by a slip—low without passing it around the tree, so we had only to fasten the ends and to the hind axle. I went for the team and slip the knot and make a direct pull on the "gator." After securely fastening this rope to the axle I seated myself on the plank and gave the mules the slack. The mules were young, fiery and hardly broken to harness, and had repeatedly run away, endangering our lives on more than one occasion; but we had not thought of this in our excitement. For a moment after starting the team there was a strain on the rope, and then out came the monster, covered with mud and lashing the water into foam with his tail, the noise he made resembling to some extent the beatings of a huge propeller. The mules both looked around; and as they did so the monster gave a roar that made the very earth tremble—and the team, alligator, and your humble servant started for home. The distance was about two miles, and I think if Rarus had seen us he would have left the track with a broken heart.

GAME SLAUGHTER TWO HUNDRED YEARS AGO.—The grave of a Indian apostle, St. Acquinquid, is on a high hill at York, Me. He was converted and on the passed fifty years in preaching to the sixty-six Indian tribes of the country, and died on the 1st of May, 1682, at the age of ninety-four. His funeral was conducted with great pomp, and the Indians sacrificed 93 bucks, 67 dogs, 3 ermines, 22 buffaloes, 110 ferrets, 893 marlins, 240 wolves, 82 wildcats, 483 foxes, 620 beavers, 500 fishes, 90 bears, 80 moose, 50 weasels, 400 otters, 620 raccoons, 112 rattlesnakes, 2 catamounts, 900 musquashes, 69 woodchucks, 1,500 musks and 58 porcupines.

I know the gentlemen who are urging the change are earnest and thoughtful men; but if they will let our score system alone until they study archery one year more, they will not then desire a change. In good faith, with the cause of the good bow at heart, they are sowing the seeds of discord in the early days of the matchless pastime in our own land. Let us not do this. If we study more to hit the gold we have, and less about the elements of chance, we will be better archers. We all meet our competitors before the same target, under the same circumstances. Who is afraid of chance?

WILL H. THOMPSON.

NEW YORK ARCHERY CLUB.—The Saturday evening meetings for practice of this club are increasing in interest, a large number of spectators witnessing their shooting every week. They have had representatives also from the Brooklyn Club, Oriani Archers, Hackensack, N. J.; Ascham Archers, Brooklyn, E. D.; and North Side Club, Chicago, Ill., all taking an active part in the shooting.

In securing the skillful of the Ninth Regiment, where they are, the club did a brilliant stroke of business, causing an increase of interest among their own members as well as of those interested in the royal game outside of the club. The return match with the Ascham Archers is spoken of to take place Saturday evening, Feb. 28th, at the armory. The regular monthly meeting will take place Wednesday evening, Feb. 25th, at the residence of the Secretary, Jns. W. Auten, Jr., 339 West Thirty-second street.

BROOKLYN VS. ASCHAM.—The return match between teams of the above Brooklyn Archery Clubs took place this week at the Archery Hall, Division avenue and Clymer street, Eastern District. The Ascham team was in command of Capt. Chapman, and the Brooklyn under the supervision of Capt. Hoyt, Mr. Mandeville, the Ascham, scoring for the Brooklyn team, and Mr. Pearson for that of the Ascham. The distance was 30 yards, and each team shot 60 arrows in rounds of 30 arrows for each contestant, each round consisting of 10 ends of 3 arrows each from each bow of the team. When the last round had ended the score was as follows:—

SCORE OF ENDS.

Brooklyn.....	55	62	59	66	60	60	63	58	60	74	625
Ascham.....	51	55	55	55	63	55	40	55	61	547	
Brooklyn.....	63	63	61	70	60	74	60	48	57	620

Answers to Correspondents.

- H. W. A., Jr.—Send us your address.
- C. C. H., Lathrop, Mo.—See answer to your question elsewhere in this column.
- C. E. S., Orange, N. J.—Write to H. C. Glover, Tom's River, N. J., or to A. H. Crain, Forked River, N. J.
- J. C., Altoona, Pa.—It is unlawful to trap and export quail from North Carolina.
- G. W. W., Rockford, Ill.—Dr. Henshall's address is Cynthia, Kentucky.
- B. M. A., Troy, N. Y.—The open season for deer in Virginia is from Sept. 1st to Jan. 15th.
- H. F. D., Tecumseh, Mich.—We know of no book specially treating of ferret raising. There is some demand for them.
- THOUT, Easton, Pa.—You will find in the country accessible from Charlotte, N. C., deer and quail. The fish are pike, bass and trout.
- A. F.—Address the letter in our care, and we will forward it to Mr. Harvey. He leaves for England in a few days.
- A. W. B., New Preston, Conn.—See answer to your question elsewhere.
- O. H. R.—Coughtry's boat is very serviceable, and is all that is claimed for it. Send to him for circular.
- C. J. C., Hildesheim, Me.—We have never examined the device. It may be worth the price of the article for you to test it yourself.
- E. W. B., Olean, N. Y.—The Harpers publish the "Elements of Meteorology," by Prof. Elias Loomis; price \$1.75. We cannot vouch for the firm you inquire about.
- E. C. S., New York.—You might secure live wild turkeys through the dealers in game in Washington Market. For a young buffalo apply to Reiche & Bro., Chatham street, New York.
- J. B. K.—For information about the unimproved lands of Tennessee and Missouri write to the Commissioners of Immigration at Nashville, Tenn., and St. Louis, Mo.
- NEWSPAPERS, BROWNVILLE, Tex.—Your concealment under a *nom de plume* will not, we trust, prevent us thanking you for kind favor of late date. We recognize the courtesy, though it be anonymous.
- F. G., Bennington, Vt.—The recoil of a rifle begins with the movement of the bullet in the barrel, and ceases when the barrel is again filled with air after the bullet has left it.
- E. L. T., Fordham, N. Y.—There is no fishing in the Bronx River. You may find the tent you want by visiting the tent-folks advertised in this paper.
- J. S. D., Bethlehem, Pa.—We should advise you to send to the manufacturers, and they will fit you with the arm best adapted to the purpose.
- G. M. A., San Francisco.—They have a black-and-tan puppy. How can I keep him from growing? Ans. There are several methods which can be adopted for stunting a dog's growth; but as they are unsafe we cannot recommend them.
- P. S. R., Boston, Mass.—We must refer to our lady readers your inquiry for a receipt for the best mode of cooking eels and sheldrakes so as to remove their fleshy taste. Possibly some of our lady correspondents may give us the desired information.
- N. S., Monroe, N. C.—Will a gun chambered for a 21 shell shoot well with a 21 shell or 24? If not, why? Ans. You can use the smaller shells; but as they leave a little space for air the recoil will be greater.
- PRIMO, Harrisville, Mich.—I wish to buy a fine Newfoundland

bull pup dog; can you tell me where I can get one? Ans. You had better advertise for one in our kennel column. You will no doubt be successful.

T. M. W., Charlestown, Mass.—1. The name *Mortimer* is used by different persons in England. We do not know the particular mark you mention. 2. You can safely load your .12-gauge gun with 34 drs. powder, if it is a good one.

WESTERNER.—Wisconsin has three regularly organized yacht clubs—the Oskosh, Neenah and Madison. There are, besides, several summer or regatta associations. Yachting on the lakes is picking up very fast.

L. G. W., Manchester, N. H.—The firm of Allen & Wheeler formerly manufactured fire-arms at Worcester, Mass., but are no longer in the trade. They were among the earliest manufacturers of cartridge revolvers, and used to make the "pepper boxes."

W. H. C., Sardinia, Miss.—There will, in all probability, never be a match between Curver and Bogardus. Curver is now in England, or on the Continent, Bogardus is West. You need never look for a *liona die* \$100,000 pigeon match between them, nor between any other two men.

C. S., Keonansville, Can.—What constitutes off-hand shooting? Must a person stand upright, or can he rest the left elbow on his knee? Ans. The shooter must stand erect on his feet. He may rest his left elbow against the left side or on the left hip, but nothing further.

A. W. S., Chicago.—1. What rifle would you advise me to take to Washington Territory? 2. Is a reel necessary in fly-fishing? Ans. 1. You may form an intelligent opinion from the letters published in the rifle column from week to week. 2. A reel is the correct thing for scientific fishing.

W. A. C., Great Bridge, Va.—Where can I buy volume 2 of "Vanderbilt," by the author of "The Military Sketch Book," printed by J. & J. Harper in 1839. Ans. A copy might be picked up at some of our old book-stores. The Harpers know nothing of a copy to be had now.

READER, Boston, Mass.—There have been very exhaustive sketches of the Western cattle industry published in our magazines. By reading these you can determine for yourself whether to go into the business or not. You must make up your mind to "rough it" and to toll hard. The work is exceedingly laborious. Secure your situation before you start if you can.

SKETPER.—Plaid center of immersed fore-and-aft section; then cut sails so as to bring the center of effort a little forward of it, the amount varying with the bluntness of your model. If full forward on the inclined line, look toward the center of effort further forward, than if fine. See works on naval architecture. Gunne give specific answer without knowing something about the schooner.

S. P., Promised Land, N. Y.—The difference in the shooting qualities of your guns cannot be readily explained. The difference in the gauge has something to do with it, but that cannot fully explain it. The difference in material of barrel counts nothing. Two guns which are made exactly alike in regard to size and weight, and which are loaded in exactly the same manner, will give different results.

R. M. B., Philadelphia.—1. For breaking gun-shy dogs see our issue of Feb. 5th. 2. The gun is a good one. 3. The proper load for guns vary with the weight and gauge of the arms. If you give us these we can tell you about the proper load. 4. The target circle referred to in testing gun patterns is thirty inches in diameter. 5. We have conflicting statements about the party to whom you refer.

W. S. K.—I have a bitch eighteen months old that I would like to have spayed. Is she too old, or in other words, would she be more likely to die of the operation than if younger? Ans. The operation of spaying should be performed as soon after weaning as possible. We are opposed to the practice, believing it to be inhuman. Your bitch is too old, and she would, of course, run greater danger than if younger.

M. S., New Bedford, Mass.—1. My dog has a habit of biting his rump all through the summer, which creates sores on him. What will I do for him? Ans. Give two grains of arsenic each pound of dog, followed by castor oil. Rub the sores with the following ointment: Glycerine, four ounces; sulphate of zinc, four drachms; add one wine-glass of water. 2. Go to any gun store for rifle cartridges.

SARATOGA, Saratoga, N. Y.—"J. Cypress, Jr.," was a pseudonym adopted by Wm. P. Hawes (1803-1841), and over which he contributed sketches of sport, adventure and fancy to the magazines of that day. These fugitive papers were collected by Herbert and published in two small volumes in 1842. They are now of course out of print, and the volumes to be obtained comparatively expensive. There are many pleasing things in these random sketches.

C. A., Washington City.—Please tell me what to do for my setter dog. He is two and a half years old and weighs 45 pounds. Has had small worms, and after a dose of arsenic, passed a tapeworm. His nose is warm and dry; appetite good. What shall I do for him? Ans. Administer three drop doses of tincture of acetoate three times a day in teaspoonful of water. Do this for four days; discontinue for two days, and renew if symptoms prevail until cure is effected.

N. C. L., Salem, Mass.—What will prevent my dog from snapping his ears, and rolling his head violently? He has sores on the end of his ears. Ans. Your dog has external cancer. Weak mercurial ointments should be applied once a day. Tie a cap over the dog's head to prevent him from scratching and shaking his ears. Be careful to mix vegetables with the dog's diet. Give Epsom salts; half an ounce in eight ounces of water once a week. Write result.

W. E. V., Phila.—My setter bitch, nine months old, has been unfortunately lined by my old setter. 1. Will this interfere with her growth? 2. Will it break down her constitution, and interfere with her working qualities in the future? Ans. 1. Most probably. 2. Not necessarily, but do not breed her again for over a year. No bitch should be served until she has fully matured, and is eighteen months or two years old. The average breeder is too much of a hurry to raise stock.

J. J. A., Lawrence, Mass.—My setter, two months old, does not seem right. He is lively as can be out of doors, but when he comes inside he comes rather drowsy. His coat is dull, cysheaven, nose rather dry, and he sprawls himself on the floor at full length; jerks and trembles in his sleep; his appetite is poor. Ans. Try teaspoonful of salt dissolved in water, several times a day. This can be poured down the dog's throat. If relief is not found, then give doses of five grains of calomel, repeated twice within twelve hours, followed by small doses of castor oil six to eight hours after.

J. B. C., Canada.—2. Which is the best adapted breed of dog for

hounds, quail and woodcock in Canada? 3. Some time since we heard that a cross between a pointer and a setter was recommended. 4. Where can a good dog be obtained that has a fine nose and will work well, price reasonable? 5. Will there appear any articles in your paper on the working of dogs in the field? Ans. 2. Either a setter or pointer. 3. The cross between a pointer and a setter is called a dropper. They are at times excellent dogs. 4. A really good dog is a *rara avis*, and will command a good price. We must refer you to our advertising columns. 5. Yes. The first of the series will be on the handling of dogs on English snipe.

McG., Rutherford, N. J.—See answer to "J. T. P., Va.," in issue of Jan. 20th. It will inform you about fox-hounds. The dog you refer to is the dachshund, or teckel. The scenting power of these dogs is said to be very good. They are chiefly used in Germany for hunting the badger, whence the name. The ferret is a native of Africa, but has been domesticated in Europe, where they are used for driving rabbits out of their holes in the warrens. In this country they are used principally in ratting. They are always muzzled when being handled, which prevents their catching the animal hunted for, sucking their blood and going to sleep the holes.

G. A. R., Cleveland, Ohio.—Will you please give through the columns of your valuable paper the names of some of the principal books on the birds and mammals of North America? Also, please state where they can be bought. Ans. Birds—Coues' Key to the Birds of North America, Birds of the Northwest, Birds of the Colorado Valley; Baird, Brewer and Ridgway, Birds of North America. These are the most recent works on birds. Mammals—Audubon and Bachman, Viviparous Quadrupeds of North America (Lockwood & Co., New York); Coues and Allen, North American Rodentia; Coues, Fur-Bearing Mammals; Jordan, Manual of Vertebrates. For Audubon write to Lockwood & Co., New York; for Jordan's Manual to Jansen, McClurg & Co., Chicago, Ill., and for Coues' works, to Dr. Elliott Coues, Smithsonian Institution, Washington, D. C.

J., Baltimore, Md.—My pug dog (age not stated) for some time past has been passing blood at intervals. I have on several occasions given worm medicine and followed it with a dose of castor oil and generally he comes around all right, but it is only for a week, when the trouble returns. I am sure the blood that he passes any worms after my treatment. His coat is in bad condition. If you can, advise me what to do for him? Ans. Your dog probably has congestion or chronic inflammation of some portion of the intestinal tract. Give small repeated doses of castor oil and laudanum, small teaspoonful of the former to one-half teaspoonful of the latter. Repeat once or twice a day until relief is found. Number of doses to depend on the severity of symptoms.

SPONT, Torresdale, Pa.—My red Irish setter has a large lump on his throat. It does not seem to trouble him. He eats well and seems to be in good health. I first noticed this lump a few days ago; it came nil at once. The lump is hard and not tender to the touch. Ans. You have neglected to state the exact position of the lump, whether it is in between the angles of the lower jawbone or back of the jawbone behind the ear. You had better, however, clip the hair off the part affected and paint the swelling with tincture of iodine once a day for a week; to prevent the dog from scratching the tumor, tie a cloth apron around his neck, which will cover his shoulders, and give him two grains of iodine of potassium twice a day, two hours before feeding. Feed liberally and allow plenty of exercise. Let us hear result.

KENO, Prairie, Miss.—1. What is the difference between a cocker spaniel and any other spaniel? 2. What are both good for? 3. Are they both land and water dogs, and are they first-class bird dogs? Ans. There are different varieties of the spaniel, the most common of which are the cockers, King Charles, springer, black and tan, bluebelly, clumber and water spaniels. At the last New York show these four classes were exhibited, namely, the Irish water spaniel, clumber and cocker, or field spaniels. The cocker is distinguished by being the smallest of the land spaniels, 2 and 3. The spaniels can be divided into two classes—land and water dogs. The former are used for flushing game, and the latter for retrieving wild-fowl and water birds. Cockers are much used in England for both woodcock and pheasant shooting. Mr. M. P. McKoon, of Franklin, Delaware County, N. Y., has some celebrated dogs; we will give notice of them next week. Mr. P. S. Van M., Indianapolis.—We are two boys aged eighteen and nineteen, both engaged in business as clerks. Our fathers offer us together \$3,000 to go out West into the cattle business. Both of us are utterly ignorant of cattle and farm life, and hesitate on that account. Which would you advise us to do, go or stay? What fire-arms would you advise us to procure for hunting game? Ans. Take \$500 of your money and go out to see for yourselves. You cannot expect to make cattle-raising or anything else a success without giving notice of them next week; you must have the only requisite. Success in any undertaking depends so much upon a man's individual character, energy and good sense that it would be hazardous for us to venture such advice as you ask of us. Scores of fortunes have been made in the cattle business, and scores of men, too, have failed. If after your trip of inspection you decide to embark in the business, you will probably have learned by that time the necessity of serving an apprenticeship in it. Take a rifle if you wish to combine pleasure with business.

PUBLISHER'S DEPARTMENT.

TO PRESERVE FLOWERS.—A good way to keep cut flowers fresh is to lay them in wet clothes. Take them out of the vases at night, sprinkle with cold water and then wrap them in cloths made very wet with cold water. The weight of the cloth will not crush the most delicate flowers, while it keeps out the air, and prevents their falling to pieces or opening still more.

To preserve health use Warner's Safe Remedies. These are almost of miraculous power in removing diseases from the system. The wonderful curative qualities they are possessed of is vouched for by tens of thousands. —*Adv.*

—A few hours of time and an expenditure of a few dollars in setting out shade and ornamental trees will amply recompense him who plants them. Some of our New England villages have of late years organized village improvement societies for tree planting and otherwise beautifying the public streets. The tree-planting set is well worth following. We commend to our friends the notice to be found elsewhere of the Babylon Nursuries.

GOOD EVIDENCE.—When such men as the Rev. Dr. Rankin, Rev. D. Harvey, Prof. Green, Dr. Bartine, Col. John K. McKesney, E. W. Nelf, and a host of others equally trustworthy, certify over their own signatures to the marvelous efficacy of Warner's Safe Kidney and Liver Cure, in the diseases for which it is recommended, it is time to dismiss doubts on the subject. —*Adv.*

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto and sending name and copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 19, 1880.

To Correspondents.

All communications whatever intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

Send for Circular of Premiums offered by the Forest and Stream Publishing Company.

CONSTITUTIONS OF CLUBS.—We are in constant receipt of letters inquiring for forms of a constitution and by-laws for sportsmen's clubs. We shall esteem it a favor if clubs will transmit to us copies of their forms. Their dissemination extends the good cause.

The reception accorded the President of the New York State Association for the Protection of Fish and Game upon his recent visit to this city was highly gratifying, and gives evidence that the sportsmen in this eastern section of the State are rapidly increasing in numbers and are coming to take an interest in the affairs of the State Association. It has taken several years of persistent labor on the part of a few individuals to teach the sportsmen of this vicinity that there was a solid organization in the State, and that it has already held twenty-one annual conventions, each one of them superior to those before it. But now a sudden change has taken place in this respect, and when Mr. Silsby, the President of the association, came here, it appeared that the clubs of Long Island could not do enough to show their appreciation of the Association; and in making his stay agreeable. An impromptu banquet at Mouquin's, drives and receptions were the order of the day. The Kings County clubs will be well represented at the Seneca Falls Convention, and they are all working in harmony to that end. In their fellowship and concert of action they are setting an example worthy of imitation in every section.

—“The older I grow,” writes “Ned Buntline,” “the more I love fishing, for I can wade streams easier than I can tramp over land in search of game.” Angling is the gentle craft; *par excellence* the employment of a quiet day. Men may angle when they may not shoot. The tramp over the fields and through the woods with gun and accoutrements presupposes a certain superabundance of vigor. It is the fit sport of the young man whose glory is in his strength, and of those who are in the prime of life. As men grow older they forego the tramp after game and go out more often with rod and reel. The angler's passion never ceases. An old man finds in the solitude of the streams a fit scene for living over his life again in the memories which there gather about him, playing in and out with the shadow of the leaves and the flashing of the stream.

JUDGES AND THEIR CRITICS.

WITHIN the last few months, and noticeably immediately after the inaugural of the Eastern Field Trials, we have been in receipt of a batch of letters from parties requesting us to write scathing articles on the judges and their decisions. Applicants have also appeared in the body, who have urged and endeavored to persuade us to take up their cudgels and smite in a backhanded, covert kind of way the gentlemen who did not decide in favor of their friends' dogs. As yet, however, no winner has put in an appearance or written us abusive letters on the subject, so that we presume that to a few, at least, the trial decisions appeared to be just and correct. If they had been otherwise we are sure that there were gentlemen who were recorded as winners who would have been as ready to disclaim any errors of judgment or partiality regarding their dogs as the friends of the owners of animals that were beaten.

Really, matters are getting so bad, both here and in England, that it seems that there cannot be a bench show nor a field trial without the sporting press being for weeks afterwards flooded with communications from the large army of unsuccessful competitors, the poor judges being the bulls' eyes at which they aim. It therefore appears to us that a continuance of this course will, within a short time, deter, in a direct and indirect way, if it has not done so already, the very men who are specially adapted to stand as judges—in what may now be termed the annual sporting pillars. As a relief for this we occasionally hear it said by those of the broad-brim persuasion “that the only way so save this trouble is to award each entry an equal prize.” This ingenious method, however, is not the remedy we would suggest for stopping what is vulgarly called “kicking.”

It is to be presumed that every one that places his animal in a bench show, or runs him in a field trial, is aware that the dog is intended for competition, and that there are to be judges to pass on his merits and failings. That the exhibitor should know the names of the judges is of paramount importance. Once knowing their names he can determine for himself whether they are fitted for the position or not, and whether they will be perfectly unbiased in their decisions. If he resolves that they are not he should not enter his dogs, there being no obligation for his doing so. But if he does enter his animals he thus accepts these individuals as fit persons to judge his entries, and thus binds himself to abide by their judgments. If then he adopts the latter course and finds too late that he has been wronged in a willful manner, he would show more spirit, good sense and manliness, by quietly submitting to the injustice which he has no power to remedy, and ever afterwards refusing to enter his stock in any show or trial conducted by the same management.

In all sporting matters the duty of the judges is an onerous and an extremely thankless one, and a most liberal allowance should always be made for contingent errors. At the same time, however, it should be borne in mind that there is a vast difference between errors of judgment and intentional wrongs. We mark this distinction because we notice that correspondents of the “kicking” class usually begin their epistles in an incoherent tone, alluding to the mistakes of the awards, when they really point to supposed wrongs that have been done them, and, as is often the case, they wind up with direct charges. Undoubtedly there are at times just grievances, because in all sporting matters incompetent persons will be selected to fill the high offices of judges and umpires. Take, for instance, the old English game of cricket, and it is found that the only proper person to umpire the game is one who is a practical player himself; he must be this; but it is not because he is a crack player that it fits him to decide the points of the game; he must be something more. Thus on the same ground, because a gentleman owns half a dozen good dogs and is a rare good shot, it is no reason why this fits him to stand alone and judge the working of a number of dogs at a field trial. The only man who is really worth a rap for the position of judge in the field is one who has made shooting over dogs in all sections of the country a life-long study. What does an old woodcock shooter who has never been out of the cover of his county know about dogs that have been handled only on prairies? Is he a fit person to lay down the law? And yet he may excel in the cunning of that branch of his craft. No, he is no more fitted than the prairie sportsman is to judge the most killing cover dog ever littered. Therefore, to sum the matter up, let gentlemen of universal experience fill the list of judges; their names should be announced when the entry roll is open. Then will the exhibitors commit themselves morally, and either courtesy or a sense of shame will oblige them to quietly abide by the decisions of the judges whom they have practically accepted. All this will then tend to make shows and trials more popular, and exclude from both the bane of all true sport, the chronic grumbler.

—We commend to Professor Elliott Coues and other anti-sparrow partisans the experience of Tobit, as detailed in the ninth and tenth verses of the second chapter of the

Apocryphal book bearing his name. The marginal notes will in turn afford some consolation to the friends of the bird; putting these aside, however, the inference is that the habits of the ancient bird which dwelt in the walls of Nineveh, in the reign of Sarchedonius, were very similar to his modern Anglo-American cousins, who litter up the stoops of brown-stone fronts in the modern city on Manhattan Island.

WINGATE VS. LAIDLAY.—When late last fall Laidley's “Rifle Firing” was sent out among riflemen the close similarity of the work to the small compilation of Gen. Wingate on the same subject led many who were familiar with rifle literature to cast it aside as of no value, since it contributed so little that was not already known. It was evident that Col. Laidley had only a closet or theoretical knowledge of rifle practice, and that his work at best was only an attempt to provide a book for the army by an army officer in preference to one prepared by an outsider and a member of the National Guard. But while it was almost a certainty that the work was not to create more than a transient rifle in rifle circles, Gen. Wingate did not allow the bald and barefaced infringement of his copyright to go unnoticed. As the case went almost at once into the courts, the FOREST AND STREAM has abstained from making any comments on the controversy, not even going to the extent of a notice of the Laidley book. Within the past few days the action in the United States Courts has reached a conclusion, in a complete victory for Gen. Wingate, by the issuance of a decree of perpetual injunction against Col. Laidley and his publishers, the full text of the decree to be found in our rifle columns. The matter has been watched with a sharp interest by army officers, since the curious spectacle was presented of an officer high in the service of the ordnance department, when ordered by his superior, the Chief of Ordnance of the Army, to prepare a book, filching entire sections with the poorest shadow of a change in phraseology, and when the work was approved by the Secretary of War, and sent far and wide to army posts and officers all over the country, to have it judicially determined by an action in equity that Col. Laidley had appropriated that which was not his own and palmed it off on his superior officers as an original work. He did not give the least credit to the sources of his information, nor did his superiors detect the character of the work which was presented for their approval. The whole matter is one which does little credit to the army side in the controversy. It is a fair, flat acknowledgment that the man thought most competent in the whole army of the United States to prepare a work on rifle practice was not so competent, but did not scruple to appropriate, to use no stronger term, what he could not himself prepare. West Point has never had a work on this important branch of military science; there are many works on gunnery, many on the force of explosives, and reports many and various on small arms and magazine rifles, but a work from which the soldier may learn how to use his infantry arms has not yet been in possession of the army of the United States. The National Guard secured such a work, made rapid progress in rifle firing, so much so as to completely defeat picked teams of regulars, and now, as a crowning mishap in the chapter of accidents which regular army rifle practice has thus far been, an official high in rank is convicted of an offense which gives point to Gen. Wingate's closing phrase in his review of the infringing work, that Col. Laidley had shown himself unworthy of consideration as an officer and a gentleman. The matter, however, should not be made a personal one. The blame must rest on the army as a whole. It has been sadly and lamentably deficient in this important branch, and its ignorance and helplessness is in nothing so conspicuous as in this latest decision.

WHO WAS JOHN A. GRINDLE?—Where did he live and what disgraceful thing did he do, that that most detestable fish-reptile, the “Grindle,” “lawyer,” “dog-fish” (*Amia calva*), was named after him? Had any one else asked that question we should have referred them to our frequent correspondent “Salmon Roe,” of Jacksonport, Ark., who is well versed in the ichthyological lore of his section; but it happens that “Salmon Roe” is the very one who propounds the puzzle. We are probably safe in assuming that the question was sent to us, not because our friend really wished to know who John A. Grindle was, but rather an expression of intense disgust after a day of vexatious experience with the ugly and voracious fish in question. It is a summing up in one terse interrogatory of a whole page of anathemas and epithets. But “Salmon Roe” errs in casting the odium of the Grindle-fish back upon the memory of the man after whom it is named. It is surely an unsafe assumption to premise that because a specimen of natural history is an unpleasant thing to deal with, any ill repute should thereby be attached to its god-father. It is considered quite an honor than otherwise to have one's Latinized patronymic incorporated into the scientific nomenclature of what Oliver Goldsmith designates Animated Nature. We are acquainted with some men, whose craving after fame does not extend beyond securing for their names such a piscatorial immortality; nor, so far as we may judge, are they at all fastidious about the game qualities or specific

characteristics of the particular species which is to bear their memory into the bogs, swamps and ocean depths of posterity; finely flavored food fish or misshapen monstrous man-eater—it's all one and the same to them. Viewed from the æsthetic side of it, however, it may be urged that the name which is linked to that of the food fish will be oftener heard at the breakfast table of the pedant, while the name which is tucked on as one of the epines of the ugly denizen of the lakes and rivers will be sounded with the impatient exclamations of disgruntled anglers. The "Grindle" is a case in point—a greedy, ill-mannered and savage fish, tenuous of life and comparatively as powerful with his tail as a Florida alligator, and not the thing to meet when one is fishing for other game. By the way, this peculiar fish would have made a fair showing in our "Fish Swallowing Fish" stories, for here is what Dr. D. C. Estes says about one of their peculiar habits:—

While the parent still remains with the young, if the family become suddenly alarmed, the capacious mouth of the old fish will open, and in rushes the entire host of little ones; the ugly maw is at once closed and off she rushes to a place of security, when again the little captives are set at liberty.

This is all we can tell our correspondent in reply to his query. If he is not satisfied with our answer, possibly some one else may bring to gaff a better reply to his inquiry; and if so we should be glad to publish the size and weight of the catch.

WANTED.—Daft's American Eleven is to play the Eleven of England, a three months' match—17th, 18th and 19th of May, for the benefit of the Cricketer's Fund Friendly Society. The match is under the auspices of the Marylebone Club. Another charity which this much-looked-up-to organization could at the same time bestow, would be a set of rules, framed in a manner that people in a strange land might dimly comprehend. Except the account of the adventures of Alice in Wonderland and the Hunting of the Shark, the equal of the Marylebone laws for descriptive clearness has never been published. We have enjoyed studying out the mysteries of "shorts" and "puts" and "calls"; the terms of the race track have had some charm, and "bluff," "straddle," "ante," "call" and "go-you-one-better" have possessed their interest, but the length and infinite mystery of the present laws of cricket and their primitive nomenclature overcome one with dismay. Of course it is great fun to the initiated, but seriously it appears to us that if the laws were simplified it would help to make the game more popular in America.—"Ows that?"

NOTES.—The slaughter of buffalo goes on, and one wonders at the vast number of these animals there must have been and must be even yet to stand this wholesale destruction year after year. Outside of a regularly appointed *abattoir* and a winter deer-yard, there is nowhere in the world such systematic, business-like and relentless killing as on the buffalo plains. The Texas cow-boy, as pictured by our correspondent, is one of your ghouls who delights in bovine murder, and his craving for blood will never be quenched until his sport is spoiled by the extermination of his victims.

The Arion Ball to be held at Madison Square Garden this evening will be the most elaborate affair of the ball season. Among those present will be Capt. Diehl, Capt. D. D. Yuenling, Capt. Geo. Acry, and a host of other gentlemen whose names are well known in New York rifle circles.

Wisconsin has fallen into line by the formation of a State Sportsmen's Association for the protection of fish, game and birds. To the Kinnickinnic Club, of Milwaukee, belongs the credit of the inception of this movement. We welcome the new association to the ranks of the workers for game protection, and with all the more pleasure because the members of the body are men who mean business. All success to them. Wisconsin is a grand State for game and fish; to properly protect the present supply and to insure against diminution will demand systematic and untiring labor.

There has been an unusual crop of small boys in the police courts recently. Most of the little rascals were brought up on the charge of having run off from home or school with the avowed determination of fighting Indians or becoming pirates. There are many reasons why young folks become restless and dissatisfied at home and think that they can better their condition by starting out on the war path. One cause of the trouble is the vicious literature upon which their brains and souls are fed. It behooves every father and mother to see what kind of books and papers their boys are reading. There are so many good (not goody) books now that no lack of the proper mental food can be urged as an excuse for cramming young heads with pernicious nonsense. It is a most excellent plan as well to make a child interested in some hobby, or special pursuit; something which is not exactly play. Let him keep an aquarium and study the habits of the fishes in it; give him a quarry of rabbits; set him at breeding fancy pigeons or poultry; give him some hints in botany; when he is old enough fit him out

with rod and line, or with dog and gun; and when you have taught him to go out into the fields with his eyes open for the thousand and one wonders in his path, you need not fear that he will elope with the gun and start out after redskins. In short, you who love rod and gun and the fields and the landscape, see to it that your sons are learning of this wisdom of the natural world; cultivate in them your own sportsman's tastes, and our word for it they will repay the teaching ten fold.

One of the New York daily papers makes a specialty of the accidents which happen to sportsmen. By industriously gathering reports of these casualties from Maine to Texas quite a grim record is collected; formidable enough, in fact, to point a very capacious moral. Yet it would not be difficult to show that, even during the most perilous period of one's early acquaintance with fire-arms the handling of guns is a safe employment. Mr. Charles Francis Adams asserts that the statistics of railroad casualties show that the safest place in the world is on a railroad express train at full speed; and reasoning in like manner from the percentage of the sportsmen who are injured among the total number of men who use fire-arms, we might conclude that the safest position in the world is at the rear of a loaded gun. The fallacy that leads to so much disaster is the evident conviction entertained by thoughtless gunners that the safest position for themselves or their friends is at the muzzle of a gun which is both loaded and cocked. Nothing but a casualty ever teaches these men their error, and when they learn the lesson it is usually too late to profit by it. Meanwhile let no one be daunted by these industrious newspaper collections of shot-gun casualties. Tens of thousands of guns are handled with impunity, and more men have been killed within the last twelve months by the implements of labor than by those of sport.

Commenting upon a recent French novel, the Boston *Literary World* observes that a "passionate love for natural scenery is manifesting itself more and more all through modern French literature," which perhaps means an advance of French literature in general, and a purification of the French novel in particular, which would certainly not be injured by a liberal supply of fresh air and natural scenery. We do not naturally turn to France for word landscape-painting.

From the swamps of the euphoniously named Cow Island, in Louisiana, comes the weird, strange story of a hen which has hatched out seventeen alligator eggs, and now perambulates about the premises with her interesting brood. And Florida—emulous Florida, which is always one ahead—has her hen too. Three of her eggs were swallowed by a snake, which thereat he pursued into the woods and slew. Several days afterward a farm hand discovered three young chicks picking their way out through the skin of their reptilian incubator.

GAME PROTECTION.

MICHIGAN SPORTSMEN'S ASSOCIATION.

THE fifth annual session of the Michigan Sportsmen's Association convened at Bay City, Feb. 4th and 5th. The former meetings of the association have been characterized by earnest and practical discussions of live questions relating to game and fish and their protection, and the Association has earned for itself the name of being in reality what its name imports. The attitude of the members and the spirit by which they are actuated were admirably expressed by Mr. W. C. Colburn, one of the delegates from Detroit, who said:—

"We are neither more nor less than citizens of the State, who in point of character and intelligence, I claim, will compare favorably with any other body of citizens who assemble together in convention in behalf of any object that affects the business, health and wealth of the whole State. I hold that the especial work of this association is in the direct line of sustaining and producing wealth for the State, as important, in its measure, as the cultivation of the soil and the production of its grain or fruit food for the people. We go to the Legislature with no selfish ends to serve, but only in the interest of the preservation and perpetuation of all valuable food game, animals and fishes—a subject of far greater importance to the people, especially to the residents of the more recently settled portions of our State, than is generally appreciated. I think that the dignity of this body, and the importance of the work we have in hand, should be more plainly and emphatically asserted, and the resolutions under consideration, if adopted by this convention, will be a move in that direction."

The officers of the association for the past year were: President, E. S. Holmes, Grand Rapids; Secretary, H. B. Roney, East Saginaw; Treasurer, N. A. Osgood, Battle Creek; Director for four years, Cyrus W. Higby, Jackson; Director for three years, W. C. Colburn, Detroit; Director for two years, E. C. Nichols, Battle Creek; Director for one year, D. H. Fitzhugh, Jr., Bay City.

The following clubs were represented by their delegates:—Central City Sportsmen's Club, Jackson; Cyrus W. Higby, John N. Squires, Chas. Woolcott, Geo. Allen, Moses K. Bortne, East Saginaw Game Protection Club, J. R. Livingston, T. B. Spencer, George L. Remington, C. M. R. Norris, C. L. Judd. Bay City Shooting and Fishing Club, George Greenwood, E. G. Carrier, E. A. Cooley, F. L. Westover, J. R. Hitchcock. Kent County

Sportsmen's Club, Grand Rapids; Harry Widdicombs, J. C. Parker, W. C. Dennis, George A. Gould, E. H. Barnard, Bay County Sportsmen's Association, Bay City; S. T. Holmes, D. H. Fitzhugh, Jr., S. A. McLean, S. Van Dusen, John Willkins. Lake St. Clair Fishing and Shooting Club, Detroit; W. C. Colburn, L. W. Tinker, John F. McMillan. Point Mouille Shooting Club, Detroit; E. H. Gillman, Howell Shooting Club; B. H. Rupert, Charles G. Jewett, R. H. Rumsey, E. G. Angel, Edwin Wilcox, Messrs. N. A. Osgood and E. C. Nichols were received as delegates from the Battle Creek Sportsmen's Club.

In his opening speech to the Convention, President Holmes suggested that the most effective way to secure proper game legislation would be to secure the services of some ardent and judicious game protectionist to go to Lansing with well prepared bills, and stay there, working in this interest till final action on the same. This is a course which has been adopted to carry out the ends of other interests, nor is there any reason why it should not prove equally effective in this branch of legislation.

One feature of the society's work has been the presentation of voluntary essays by its members and others, and the report of committees appointed to prepare papers on assigned topics. There were a number of these essays read at the last meeting which merit attention, both from the matter contained in them and also because they give evidence of increasing interest in the ethics of sportsmanship and the science of natural history. Mr. Gillman, who read a paper on sporting dogs, prefaced his thoroughly sound remarks by paying a high tribute to both the practical breeder and breaker, and their necessary qualities, not only as thinking men but as experimentalists. He most opportunely referred to the great revolutionary strike which has taken place during the last six years, showing that the starting point was in the initial bench show first held in Michigan, which has led to-day to the firm foothold of wonderfully improved stock throughout the length and breadth of the land. In touching upon the expediency of field trials, he strikes the key note in these ringing words: "An animal may be well-bred, and good looking and symmetrical enough to win first-class dogs, and even to win first-class stakes, in addition to blood and beauty, first-class field qualities are not worth breeding to." For the best season to run the trials, he rightly advocated the early and usually favorable weather of November; and he also wisely advocates a central location for the holding of same. The expenses attending all field trial exhibitions Mr. Gillman considers to be the stumbling block in their way, until a large number of first-class dogs are owned in each community. In the mean time a system of cooperative training has been suggested, based upon the support by all dog owners in each individual State. The abolition of nursery stakes is most properly advocated, as being injurious to the animal and leading to no conclusive results. The only proper stakes being for puppies, braces and the free for all. The proper time "when a dog shall come of age" is also discussed, and a preconceived attack upon railway dog rates and extortionate baggage men advised. The report concludes with a kindly plea for man's most faithful animal.

The report of the committee on nomenclature was an exhaustive discussion of the subject, designed to secure the use of a correct and uniform system of names for our game. This paper will receive further and fuller notice from us.

Mr. Frank N. Clark, of Northville, a member of the U. S. Fish Commission, read a paper on the "Red-tailed Trout of California," urging its merits as a game and food fish, and recommending that it be transplanted to Michigan waters. This was followed by a full history of "Michigan Fish Culture," prepared and read by Mr. J. G. Portman, of the State Fish Commission; and a further contribution to this branch of the Association's work was an essay by Mr. Mathew.

The committee on laws recommended that the provision against exporting deer out of the State be made separate bill, that the opposition thereto might not, as it had done before, defeat the measure which they deemed best for the protection of that animal. The bill recommended provides "that no person shall pursue, hunt or kill any wild elk, wild buck, doe or fawn, save only in the Upper Peninsula from the first day of August to the 15th day of November, and in the Lower Peninsula from the 15th day of September to the 15th day of November, inclusive, in each year, or kill at any time any deer when it is in its red coat, or any fawn when it is in its spotted coat, or have in his possession the skin of such deer or fawn in the red or spotted coat, and the having in possession the skin of such deer or fawn shall be *prima facie* evidence of such illegal killing. No person shall at any time kill or capture any deer in the waters of any of the streams, ponds or lakes within the jurisdiction of this State." It further fixes the open season for wild turkeys from Oct. 1st to Jan. 1st; woodcock, Sept. 1st to Jan. 1st; prairie chicken or pinnated grouse, partridge, grouse of any species, wood duck, teal duck, mallard duck and gray duck, from Sept. 1st to Jan. 1st.

The selection of officers resulted as follows: President, Dr. E. S. Holmes; Secretary, H. B. Roney; Treasurer, N. A. Osgood; Director for four years, D. H. Fitzhugh, Jr. The Convention then adjourned, to meet at Lansing on the fourth Tuesday in January, 1891.

There were so many topics of interest deserving of fuller mention than we can here give them, that we shall refer to some of them next week.

ANOTHER STATE ASSOCIATION.—The Kinnickinnic Gun Club, of Milwaukee, Wis., now three years old, is an energetic and earnest body of men who are making their influence felt for the protection of game and the advancement of the interests of sportsmen. The third annual banquet of the club was held last week at the Newhall House, Milwaukee, on Tuesday evening, at which gathered a large number of local sportsmen and invited friends from all over the State. There were the usual festivities of such a happy occasion; for Wisconsin sportsmen always know how to enjoy themselves when gathered together; but the movement which deserves special mention was the organization of the Minnesota Sportsmen's Association for the Protection of Fish, Game and Birds. The laws and rules are much the same as the Michigan Association, with the following changes from the Michigan Association laws:—"And any member of this association who shall be found guilty of any violation of the game laws of this State shall be expelled,

and any auxiliary club which fails to discipline any of its members for such violation shall be dropped from the rolls of the association. The following are the officers elected:—President, Fred. Reitzbach, Milwaukee; Vice-Presidents, C. Simonds, Milwaukee; R. M. Boyd, Racine; G. A. Winchester, Whitewater; R. H. Strong, Baraboo; C. E. Norbeck, La Crosse; W. K. Delaney, Mayville; Chas. Felker, Oshkosh; Wm. Merrill, Prairie du Chien; M. T. Bailey, Madison; W. W. Corning, Portage; T. S. Powers, Tomah; J. G. Rowell, Beaver Dam; P. F. Tiel, Eau Claire; W. A. Van Brunt, Horicon; Sam. Fieheld, Ashland; J. C. Neville, Green Bay; F. A. Turner, Stoughton; L. M. Wyate, Fond du Lac; E. W. Jones, Waupun; John Laigh, Oconto; Peter Greeley, Muckwonago; M. J. Egan, Franklin; H. A. Taylor, Hudson; Jacob Kolter, Wausau; Lou. Walker, Plainfield; J. H. Boyle, Winneconne; F. W. Sackett, Berlin; Secretary, S. J. Williams; Treasurer, Stuart Murray; Committee on Legislation, James A. Mallory, D. W. Small and Geo. H. Markham.

The officers of the Kinnikinnick Gun Club are:—O. W. Robertson, President; Stewart Murray, Vice-President, and A. C. Jones, Secretary and Treasurer.

THE MIGRATORY QUAIL IN GEORGIA.—*Thomasville, Ga., Feb. 12th.*—In your last number is an account of a migratory quail caught on Mr. James Blackshear's place, near Thomasville. Some negroes working in a field saw the bird rise near them and pitch thirty or forty yards away in grass cover. Marking the spot they surrounded it and caught the bird, which was brought to Thomasville and kept in a cage for nearly a week. It was kept as a curiosity, no one having ever seen the like before in these parts. I begged its life, and asked to have it returned to the place of its capture and liberated.

Unfortunately it refused food (rice), and died the day before it was to have been freed from captivity. I have not heard of any others in Thomas County this year; but in the winter of 1878-79 a small brood—four or five—were known to be on Mr. Blackshear's farm.

THE OLD DOCTOR.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl. "Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

THE STATE CONVENTION.—The Convention of the New York State Association for the Protection of Fish and Game, which is to be held at Seneca Falls next spring, promises to be the largest gathering of sportsmen ever yet brought together in this State. Mr. Horace Silsby, the President of the Association, has been for several days in this city, securing prizes, and his efforts have met with most gratifying success. A large number of handsome and valuable prizes have already been secured, and the list promises to be more complete and generous than ever before. The following committees have been appointed by the Seneca Gun Club:—

On Birds—J. F. Lawrence, E. V. Burton, William Parrish, J. G. Stacey, Wm. V. Van Rensselaer.
On Prizes—C. H. Williams, Francis Bacon, E. W. Bull, John Cuddaback, Levi Van Buskirk.

On Grounds—M. Hoag, Sol. Carman, H. R. Selleck, E. H. Adair, J. A. Niver.

On Printing—Henry Stowell, E. A. Rumsey, E. C. Osborne, J. D. Pollard, J. N. Hammond.

On Finance—W. P. Elwell, R. C. Wayne, J. T. Miller, Jr., A. R. Palmer, G. M. Guion.

On Fly Casting—J. B. Murray, C. H. Tuttle, J. H. Parsons, C. H. Westcott, Henry Fox.

On Rooms—J. H. Gordon, J. G. Minges, H. Stowell, Millard Frantz, E. Rosencrans.

On Pistol Shooting—Sam. Jacoby, F. Neapras, E. Hill, H. J. Purdy, M. Burroughs.

On Rifle Shooting—J. B. Tabbs, H. R. Selleck, J. Crocker, John Neapras, Geo. Esterly.

On Reception—Gen. G. M. Guion, Gen. J. B. Murray, J. D. Pollard, A. L. Childs, W. R. Kennard, Henry Marshall, A. Cook, E. W. Bull, A. H. Comstock, H. Burt, R. Merritt, John Van Buskirk, John McIntosh, Francis Bacon, E. Lester, A. Hollenbeck, L. Goodman, D. Marsh, F. Maier, F. Brady, George Hayt, Wm. Van Rensselaer, N. Duntz.

PRACTICAL METHOD OF PREVENTING RUST.—Rust is one of the bane of the sportsman's life if the owner of a gun happens to live in a moist, damp region. A Bennington (Vt.) correspondent, R. M. L., sends us the following method of preventing guins from rusting while in disuse:—

Allow me to recommend to your readers a very simple, yet absolutely certain, method of preventing rust in the bores of rifles and fowling pieces. By this means I kept mine in perfect order for six years in the destructive climate of India, where the dampness and sea air during the monsoons are foes alike to the sportsman and his guns.

The method is as follows: Have made a cleaning rod nearly filling the bore of the gun. Then take a strip of cotton cloth (canton flannel is best) from an inch wide up to three inches, according to the size of the bore, and six inches longer than the barrel of the gun. Saturate it with any good oil or vaseline, double about two inches of the end over the end of the cleaning rod, and press into the bore. The remainder of the cloth will, with a little assistance, fold itself lengthwise around the cleaning rod as it is introduced, thus filling up the vacant space entirely. You will see that by this means the air is completely excluded, and even the small quantity originally in the barrel is driven out. Where air cannot go moisture cannot, and the gun may remain untouched for months, or even be immersed in water, without injury to the bore. Gen. Wingate recommends pouring melted tallow into the gun, filling the bore. You will see that the method I use is much preferable, as the gun can be examined at any time, or prepared for service in a few seconds, by simply withdrawing the rod. R. M. L., Bennington, Vt., Feb. 11th, 1880.

SAGACIOUS QUAIL AND IDIOTIC EMUS.—A correspondent of the Sacramento Bee claims that the California quail understand fully the import of the legend, "No shooting allowed," and he says that the man would be hooted who should express incredulity on this point. He adds:—

I was so fortunate the other day as to secure the privilege to shoot in a field well guarded on all sides with the usual inscription. I found quail only near the warning, but there in great quantities. I will suggest that all those gentlemen who contemplate a quail-shooting excursion shortly to provide themselves with a goodly quantity of signs marked, "No shooting allowed," and place them, without regard to order, in different places on the proposed ground.

A different bird altogether is the great, stupid emu of Australia, to capture which the hunters employ devices very similar to the artifices of antelope hunters on our Western plains. A writer in the last number of the London Field gives this amusing description of emu hunting:—

They may also be easily shot by adopting the following means: The emu seems possessed of an insatiable curiosity, and if it sees an unusual-looking object on the downs, it is not satisfied until it has fully investigated that object, no matter how difficult the circumstances under which it has to conduct its research. The plan adopted when emus are wanted is, on seeing a mob of them feeding in the open, to ride within a quarter of a mile of them, dismount, hang up your horse, walk a few yards away from him, and throw yourself flat on the ground, taking care that you are in full view of the birds. The more you then roll about, kick up your heels, shout, whistle and perform all manner of antics, the sooner will the birds come round you to see what new demon of the downs has made its appearance. At first they will stand and stare with astonishment, but they soon begin to approach nearer and nearer, till at last they are within arm's length. You may then, if so disposed, pot the whole lot, as the report of the gun or rifle merely causes the survivors to "jump round," to quickly return again to continue their examination of the unknown object. The emu forms a very primitive nest by collecting together a little grass into a small heap, on which she lays seven to nine dark green eggs, weighing on an average about two pounds each. The eggs roasted are extremely good eating, and the man who can polish off more than one at a sitting is blessed with a tall appetite.

SPORTSMEN'S ROUTES IN MONTANA.—The following memoranda from our correspondent at Fort Custer, Montana Territory, are of practical value. We published a short time ago from the same writer a short account of the excellent trout streams of that country:—

As I have received letters of inquiry in regard to routes to this country, I thought by giving you the information it would be more generally received by those who contemplate a trip to our country. Parties who wish to come in winter should take the Union Pacific Railroad to Rock Creek, where Colonel Patuck's stage line connects. From there to Custer is something near 400 miles. It is made in six to eight hours when roads are good. In the boating season Captain Grant Marsh runs from Bismark, landing passengers and freight at Fort Custer landing, and those coming by way of river will be well accommodated and cannot help enjoying the trip, as the captain is a perfect gentleman, and has made the fastest time ever made on the Yellowstone. Those wishing pack and riding animals can always buy such animals, as there is a surplus in this country. There is also a stage line running from Bismark to Miles City, at the mouth of Tongue River and on up the Yellowstone to the mouth of Big Horn. From there to Custer I do not know their schedule time. These different routes are well stocked with game and fish, but closer to the mountains is better for trout. Clark's Fork of the Yellowstone is alive with these speckled beauties, but not so large as I have heard of being caught. The largest trout I ever caught was in Snake River Water, which was eighteen inches long. They are not as sweet as the mountain trout, nor have they as fine a flavor.

WM. A. ALLEN.

GRAY HARES.—Miss Leslie in her famous cook-book heads the receipt for roast hares with the instruction to "first catch the hares." Now, if there is one person above another, of whom we have had a practical illustration, who is able to do this, it is Mr. F. C. Backus, of Pittsfield, Mass. He is not only an expert in the way of knocking them over, but has been kind enough to submit several fine samples for our discussion.

DORCHESTER SPORTSMEN'S CLUB.—A club with the above name has been formed at Dorchester, Mass. The officers are: President, Col. Henry Smith; Vice-President, D. F. Eddy; Secretary and Treasurer, George E. King. The club is composed of influential gentlemen, and promises to be a strong addition to the sportsmen's organizations about the Hub.

CONNECTICUT TRAPPING.—REV. Ebenezer Gifford, of

Wallingford, Conn., did not waste time last year in fruitlessly bemoaning his meager salary, but killed 48 muskrats and 12 skunks, selling their pelts.

SNIPE OUT OF SEASON.—*Attica, N. Y., Feb. 7th.*—I shot a snipe on the 6th of February, and it is being set up by J. O. Ogden, a taxidermist of this place.

FRANCIS M. WILSON.

CAZENOVIA GUN CLUB.—*Cazenovia, N. Y., Feb. 12th.*—The members of the Cazenovia Gun Club had a pleasant entertainment a few months ago. The Secretary, Henry J. Mather, had a deer sent him from Michigan and invited the sportsmen to dine with him at 6 P. M.; need hardly say that all were punctual, and a right jovial time we had of it. Some one remarked that they were sorry that there were no deer sent; another that it would be too late for our Secretary. All united in saying that they hoped if any of the other members of the club had friends West that they would send on plenty of deer, and that the member would follow the example of our worthy Secretary. Crittenden having now the club medal, presented the club with another to be shot for the coming season. HAMMERLESS.

VIRGINIA.—*Upper Paxton, Feb. 12th.*—The gunners last fall did not bag near all the quail and rabbits in this township, and there is a fair sprinkling of that description of game still around.

NORTH CAROLINA.—*Monroe, Feb. 11th.*—Game is scarce in this section. The quail have never recovered from the freeze out they had here three years ago. An attempt to have a game law in this county has resulted in the posting of nearly all the land, and the farmers say they won't raise birds in the summer for men to kill for amusement in winter, and it is difficult to get ground to shoot over. SNIP.

TENNESSEE.—*Savannah, Feb. 7th.*—This week the long-expected polar wave came to our relief, bringing the ducks with it. They were very wild, and no large bags have been made. The greatest number killed in one day to any one gun was five. It was unfortunate in having a bright, mild day, with little wind, for my excursion, and bagged only eleven. Nearly all the ducks are mallards, with a sprinkling of teal and an occasional woodcock. No sprigitts yet. WILL.

OHIO.—*Wapakoneta, Feb. 10th.*—A large flock of geese passed over this place to-day on their way to the big reservoir (17,000 acres) ten miles from this place, in this county. The water is open in places, and both ducks and geese have been here all winter. The shell drake has been most abundant. We look for fine sport in a few weeks, as the reservoir is bank full, and the old timbers and willows make fine cover and feeding places. C. P. D.

IOWA.—*Dubuque, Feb. 7th.*—A new shooting club has been formed here which is named the "Julien Gun Club." We have twenty members, and the officers are as follows: C. H. Gregoire, President; F. A. Miller, Vice-President; William Y. Bissell, Secretary; J. C. Gregoire, Treasurer. W. Y. B.

A NOTE FROM ABROAD.—*Dresden, Jan. 21st.*—Editor *Forest and Stream*.—Our shooting season is over, and was very poor. Last season we killed on ten thousand acres near the city of Dresden, 638 hares and 757 partridges; this year 287 hares and 425 partridges. A great deal of game was killed this spring by heavy frost.

H. STROVE.

THE SOUTH-SIDE CLUB.—The annual meeting of the South-Side Sportsmen's Club, of Long Island, took place Monday night at the Hotel Brunswick; there was a large attendance of the members. The report of the Treasurer showed that the club was financially flourishing, and that the membership, which is limited to one hundred, is full. The names of several candidates were necessarily laid over. The club passed a series of memorial resolutions relating to the death of its late President, Recorder Hackett, in offering which Mr. John E. Develin recalled the long career of Mr. Hackett as President of the club:—

"In his youth Recorder Hackett manifested an hereditary devotion to the sports of the field and water. He was a natural hunter, quick eye and rapidity of action placed him in the foremost ranks as an expert sportsman, so that the fame of his marvelous skill with pistol and gun preceded him wheresoever he went, and became known and excited admiration, if not envy, even in the first of the Pacific cities. Nor was he a mere blind devotee of the gentle art. He was pervaded with a deep love of nature. The forests he roamed, the hills he traversed, and he was ever engaged in pursuit of his favorite amusement consistent to this sentiment. Under their influences his manner and spirits, somewhat somber at times, would become joyous, and his quaint remarks or odd speeches would quicken and delight the brightest of his companions and enliven and amuse the dullest of his attendants. His merry form, his ready humor, his fund of anecdote and story, his inimitable powers of narration, his love of harmony and his genial spirits drew around him and endeared him to his many friends throughout the whole country."

An election of officers for the ensuing year resulted in the unanimous choice of John Benhard as President; Charles Banks, Vice-President; William M. Fleiss, Treasurer; John E. Develin, Counsel, and George W. Hall, Recorder.

The keeper of the club's grounds at Islip reported that the prospect for trout-fishing for the approaching season was excellent, and that it would probably be the best fishing since the organization of the club in 1866. Since then it has acquired 800 acres, which afford preserves unsurpassed in any country for purposes of hunting and fishing. There are three miles of streams and water courses of ponds throughout the club's grounds and are filled with trout, and during the season of birds and deer there is much capital shooting afforded.

SOMETHING ABOUT SHOT AND PATTERNS.—*Philadelphia, Feb. 14th.*—Editor *Forest and Stream*.—When I desire to test the shooting qualities of a gun I invariably use Sparks' chilled shot, which I have never known to vary. About a year ago I wrote an article describing the manufacture of shot at Sparks' shot tower, which was printed in your journal, a short extract from which may not be out of place here. It is as follows:—

"The melted metal is poured into pans with bottoms of Russia sheet iron, perforated so small that for the No. 12 size the holes would scarcely admit the point of a pin. The metal oozes through these holes and enlarges and

to audiences derived from this side of the Atlantic. With each successive year, greater completeness in the book may be expected, and possibly American facts may find a place in its pages as well, so that international contrast can be made. In its yachting pages, the Annual does FOREST AND STREAM the honor of quoting extensively from our columns, and, what is more, has the honesty to acknowledge the source of its information. Especially attractive are the introductory articles with which each chapter is prefaced, giving an account of the origin of the various sports from the earliest period of their history. Even those who will take the liberty of quoting as occasion presents itself. The book is very presentable, in point of type and paper, and is ably edited by Mr. J. Keith Annes.

MATHEMATICAL TABLES. By Henry Law, C. E. Crosby, Lockwood & Co., London.

These tables comprise a handy little volume of the well-known "Wesley's Series," and contain all the mathematical references required for the solution of trigonometrical, astronomical and nautical calculations. Those relating to the latter two subjects have been added to the book by J. R. Young, formerly of Belfast college. The work is divided into two parts with a double object. The first to explain and illustrate the use and application of logarithms for the practical calculator, or second part. This, however, has been kept entirely separate, so that it may be used by any one without even understanding the theory underlying the construction and derivation of the tables. Many skippers, finding themselves promoted to the cabin without having enjoyed the advantages of good schooling, and not having the time at once to study the reasons "why and wherefore," they are anxious to avail themselves of just such an arrangement, and the ready sale of the book is proof of its popularity among this class. As trigonometry and the use of logarithms are the stepping stones to navigation, the concise rules given will suffice to find a ship's position; the mariner in the meantime making as much of a study of the theory as he has a mind to, and omitting what may not be of use to him. The book also contains tables of proportion, interest, mensuration, mechanics, hydraulics, etc., to which the intelligent captain will often find occasion to refer. Price 1s. 6d. to 10s. 6d.

The "Star Almanac for 1890, besides much of politics in which our readers may have a decided interest or none at all, has in it a good line of sporting events and summaries, prepared by John H. Robbins, the sporting editor, which is a sufficient guarantee of the accuracy of the dates and records. The turf is covered very fully, and in matters of interest to trap and ride shooters the notes are copious, and selected with discretion. Its price is ten cents, and in any one of its departments it is worth far above that figure.

Cricket.

WISDEN'S CRICKETERS' ALMANAC FOR 1890.—We have just received from Mr. John Wisden, of 31 Cranbourne street, London, England, a copy of his "Cricketers' Almanac" for this year. It is a complete record of the full scores and bowling summaries of the principal matches played in 1879. The little book, for though it contains 216 pages, is really only a single sheet, is as handy as a reliable and perfect record. Besides the data, which is interesting to all cricketers, it has a full account of the visits of Lord Harris' Team in Australia and Daft's in this country. The price of the almanac is one shilling; it can be had of Lippincott & Co., Philadelphia.

PRESENTATION TO WILLIAM OSCROFT.—On Dec. 16th, a large company assembled at the White Hart Inn, Red Hill, Wokinghamshire, on the occasion of the presentation to Wm. Oscroft, by his Arnold friends, of a gold watch, as a mark of their esteem, and a token of his success in the cricket world, especially during the late American tour of Richard Daft's Eleven. Oscroft, who is now thirty-six years of age, first developed his skill on the Arnold ground, and throughout his career he has been a favorite with the cricket administrators, have never forgotten him, and this feeling found expression on Tuesday in the presentation to him of a handsome and valuable gift. This distinguished cricketer may now be considered at the zenith of his fame, as he was the highest average professional scorer last season, which form he kept through Daft's tour, he being the top scorer among the premier cricketers of England. A dinner preceded the presentation, which was attended by over a hundred persons. Mr. Councilor S. Robinson presided, and among those present were Mr. J. P. Ford, Mr. R. B. Spencer, Mr. Herbert Walker, Mr. W. Lamin, Mr. W. Williams, Mr. S. Fisher, Mr. James Acton, Mr. W. Hibbert, Mr. Phipps, &c. In addition to Oscroft, there were several professional cricketers present, including J. Selby, E. Wild, J. Oscroft, A. Anthony, &c. The usual toasts having been proposed, the Chairman next read several letters apologizing for non-attendance; among those who sent being Messrs. R. Daft, R. H. Steegman, G. M. Boyle, E. Oscroft and R. Howett. In his letter, R. Daft assured the Chairman that Oscroft's conduct both in America and at home fully deserved any compliment or kindness they could show him. The Chairman then presented the testimonial to Oscroft, and in so doing, it was intended by the presentation of Arnold as a token of their esteem and appreciation of his merits. (Loud cheers.) The testimonial would have assumed a greater magnitude had not the subscription list been confined to the village in which Oscroft was born. The Chairman then said that the Oscroft family had been connected with cricket for seventy years past; six brothers of that name having challenged any of their brothers in England, one of the six being the father of William Oscroft. After some further remarks the Chairman made the presentation and proposed Oscroft's health, after which Mr. Councilor J. P. Ford followed: When his friend Richard Daft and himself took out the team to America, they were anxious to get, not only the best cricketers, but the most respectable professionals in the country. He believed the result showed that they obtained both. (Cheers.) They went out to show the Americans what true cricket was, and in that they also succeeded. The teams they met with took their defeats in a manly way, and had the Americans got a little bit the best of it, it would have been better for the tour in a financial point of view. They were determined, however, to uphold the cricket of England, irrespective of gates. He believed the English professionals, very highly of the respect of the English professionals, which was shown by the fact that wherever they went

they had invitations to come again at some future time. He commented on the fact that the Irish team, then out in America, declined to meet the English team, although they had promised to do so, and notwithstanding that there was a several desire for the match. For his part he should look back with pleasure on the tour during many years to come. If there was one more than another in the team whose conduct was more steady and respectable than another it was William Oscroft; his quiet demeanor, good character, and excellent cricket earned the respect of every one he met with. Mr. W. Oscroft, who was received with loud cheers, thanked his Arnold friends for the valuable present they had made him; he should forever cherish this present, and he hoped long to wear it. He thanked the Chairman and Mr. Ford for the remarks they had made concerning his conduct. When he went out to America he went with the intention of doing the best he could for his native village and his country, and he was glad to say he was now well recompensed for it. He thanked the committee and the donors, and also those who had by showing their faces that night manifested their appreciation of his conduct.

A REVOLVER HEARD FROM.—New York, Feb. 10th.—Editor Forest and Stream:—In your issue of the 5th inst. I notice your report of the annual meeting of the Staten Island Cricket Club of this city. After mentioning the amendment of the by-laws prohibiting members of other clubs who are members of the Staten Island Cricket Club from playing against the Staten Island Cricket Club, you comment thus: "This reform was much needed, not only to stamp the club's identity, but also to protect one or two other kindred organizations in this city." Now, Mr. Editor, with all due respect to your opinion, I very much doubt if this amendment can be termed a reform; nor do I see what protection it affords any other organization. Judging from the reports of the Staten Island Cricket Club in your paper and its great increase of membership, it should hardly think its by-laws needed any amendment in this respect, and apart from protecting kindred organizations in this vicinity, it seems bent on protecting itself, and there it ends. It doesn't fight to save its friends.

If I interpret it rightly, it bars its own members, who are members of another club, from playing against it. Now it seems to me if a man has belonged to one club for a few years and then joins the Staten Island Cricket Club and these two clubs were about to play a friendly contest, there is nothing unsportsmanlike or uncricketlike in that individual playing against the Staten Island Cricket Club; nor do I see how it affects any other organization except the individual who belongs to both clubs and who, having paid his money, is not even permitted to "take his choice," but to play with the Staten Island Cricket Club against the club which has the prior claim to his skill (i. e., if he has any) or not play at all, but simply "look on." And so, Mr. Editor, I fail to see the reform in this amendment, and I fail to see how it will benefit the club or the game of cricket, and the less restrictions the better.

A MEMBER OF MANY CLUBS.

At this time we refrain from any observations on the above, believing that an answer from one of the non-revolvers will be sufficient for the "Member of Many Clubs."

AVERAGES FOR 1879.

MERION CRICKET CLUB.

The official report of the Ground Committee of the Merion Cricket Club of Ardmore, Pa., as presented at the recent annual meeting by Mr. Richard H. Baily, Chairman, shows that "The club played in all nineteen matches during the past season. The first eleven played five, of which it won three and lost two. The second eleven played fourteen, winning seven and losing seven. During the summer the second eleven had visited New York and defeated both the St. George's and Staten Island second elevens. The club, for the first time in its history, had played on its own ground two foreign matches—one with the Gentlemen of Ireland and one with the Gentlemen of England. The grounds had been inclosed, and this year improvements and additions to the club-house and grand-stand were in contemplation. The season had been a prosperous one, the club's list showing that seventy new members had joined since the last report." All this is very good, and we congratulate the Merion gentlemen on their club's success. We are, however, surprised to learn from the above that the first eleven only defended their flannels five times during the season, though we presume the international matches interfered to an extent with the club's regular fixtures. The eleven began by defeating the Young America Club, and this should have been a sufficient incentive to have played more matches during the spring and early summer. The second eleven did bravely; fourteen matches is a good record, and shows that they do not mind a few defeats. We ourselves are rather partial to second elevens, and know that they must be cherished tenderly, not only on account of the "jolly old duffers" who play on them, but on account of the "rising generation" of cricketers who need our constant care and patient training. Although we take great interest in the doings of our young friends, yet our heart goes back to the older ones, who through thick and thin have done so much to keep the game alive in its darkest hour.

"Dear lightly on their forehead, Time! Strow roses in their way!
The young in heart, however old, that prize the present day,
And wish thus the younger crowd, and wish enough to play."

"I love to see a man forget his blood is growing cold,
And leap, and swim, or rather flounder, oblivious of his gold;
And mix with children in their sport, nor think that he is old."

"I love to see the man of care take pleasure in a toy,
I love to see him row his boat and trim his dullest boat with joy,
Or hunt the flying cricket-ball as lusty as a boy."

After all, a cricket match is not such a matter of life and death as may be supposed. Of course it is pleasant to be with the winners; but where is the game that one side or other does not lose? If with the unlucky ones, look cheerful, and say with Jacob Faithful, "Better luck next time." Why, for the fear of being defeated, debar from some old cricketer, who has set his heart on a game, the pleasure of seeing his old bones crack? Thus even a cricket committee has the dullest chance for utility. Give the golden rule, the doing of which will add more to the popularity of the game than the measuring of every one by its own individual one-inch tape. We claim that all members of a club, from the old gentleman who is plucky enough to turn up on our cricket fields, down to the modest, timid boy, should have an equal chance given them. Do not all lovers of the game uphold that both old and young can take a hand? If this is the case, why not carry out the doctrine if it be sound and true? In a country where the game is so new that many of its original founders are not yet dead, it is but natural that many old players should adhere to the customs of the past. Let the rising generation re-

member this, and the old boys that the young ones are to fill their places, and all will be well.

We learn that Mr. George Ashbridge, one of the leading spirit of the club, has retired from the management, finding that the committee business interfered with his usefulness as captain. Mr. Ashbridge has acted wisely; it is about one man's power to successfully handle a first-class eleven, and to keep in trim, so as to remain on it. No member of a club needs more practice and attention to the club's practice than its captain; he is looked up to by his eleven, and his frequent failure to "come off" has a demoralizing effect.

Through the courtesy of Mr. Edward F. Fayres, the club's Secretary, we are enabled to give the averages for the past season. They are as follows:—

BATTING AVERAGES.									
First Eleven.									
Names.	Matches.	Runs.	Times out.	Average runs per innings.	Times not out.	Runs in an innings.	Times out.	Average runs per innings.	Times not out.
Joseph M. Fox.	113	73	1	22.60	1	87	78	1	19.75

Bowling averages of second eleven not preserved.

MONTIC CRICKET CLUB.—This well-known St. Louis, Mo., club has now a member's list of over ninety members, and is able to place in the field one of the strongest elevens in the West. It is in a flourishing condition, and is hopeful that one of the cricketing organizations of the East will visit the West this season and try conclusions with them. The officers of the club are as follows: President, George Bains; Vice-President, Colonel Joel; Treasurer, F. Julian; Secretary, W. H. Chambers. Committee—A. Leslie, W. Fortes, F. Hackey, and J. Crutwell. The Captain is A. S. Treloar, well-known in cricket circles as having brought out the English Eleven to America in 1874, and as sometimes playing with the Peninsular Cricket Club of Detroit, Mich.

UNITED STATES VS. CANADA.—The Toronto Mail, which is considered the cricket paper of Canada, says: "The FOREST AND STREAM's article on the formation of a Canadian Cricket Association is a most valuable suggestion, which Canadian cricketers would do well to take to heart, and endeavor to utilize." Indorsement from such a source as this is indorsement indeed. If, therefore, Mr. L. Kennedy, Captain of the Hamilton Club, would take this matter in hand, Canada for once would turn out a representative team. Mr. Kennedy has had the experience of a visit to the States, and when here, he demonstrated that he was not only a good cricketer, but an excellent manager. As Hamilton has proved the crack club of Canada, they should take the lead in this matter.

Harry Carpenter, once professional for the St. George's Cricket Club, is wintering at Sandhills, Texas. We recently received a letter from him requesting that his best wishes might be distributed to all the members of his old club.

THE AUSTRALIAN VISIT TO ENGLAND.—Mr. James Lillywhite, of London, who is the authorized agent for the Australian Team which will reach England about the end of April, has just received a letter from Messrs. Mursbeck and Boyce, who were appointed by the Australian Association after its collision with Mr. Conway, to select the team, stating that: "Already we have from Victoria, Messrs. Blackham, Boyle, Hight, Palmer, Alexander, and MacDonnell; and from New South Wales, Messrs. C. and A. Bannerman, Spofforth, Murdoch, Massey, and we hope to prevail upon Mr. Evans to go." Mr. Hornby told us, when he was in New York last spring, that Massey and Evans were the best men in Australia. The team is supposed to be a more formidable one than the last, and that all Englishmen will forget the Sidney outrage of last year. It is presumed that Mr. Philip Sheridan will act as manager again.

—Martin McIntyre, once professional for the Germantown Cricket Club, has been engaged for the season by the Ulster Cricket Club, of Belfast, Ireland.

WESTERN CRICKET ASSOCIATION.—A movement is being made by the Mayor and many other prominent citizens of St. Louis, Mo., to establish a Western Cricket Association.

PHILADELPHIA-GERMANTOWN CLUBS.—There is a hitch in the contemplated consolidation of these clubs, the Germantown objecting to the abstract proposition to change the name and terms of organization.

THE NORTHWESTERN AMERICAN TEAM.—Has already arranged through its manager, Mr. Miller, many matches, the first to be played with the West of Scotland Club, at Glasgow, and second with the Marylebone Club, London. Foremost in the team stands Mr. A. S. Treloar, who is now residing at St. Louis. It will be remembered he brought over the Crown Cricketer Team in 1876.

MONTREAL CRICKET CLUB.—We learn with regret, from one of the prominent members of this old organization, that this club is about to be disbanded.

—Wycroft, the swift bowler, has been engaged for the season by Lord Sheffield to coach the Sussex Club. He is to be paid very liberally, to have fishing and boating, and to be allowed to play in all the great matches at Lord's, and to have certain other privileges, which causes the envy of all the professionals in England.

Yachting and Boating.

BUFFALO YACHT CLUB.—The editor of these columns returns his thanks to the members of the B. Y. C. for his recent election to the club as an honorary member. Yachting is rapidly developing on the lakes, and the B. Y. C. will put forth all its energies to maintain the high place it now occupies among the promoters of the sport in the West.

YACHTING NEWS.

YACHTING IN FRANCE.—Our transatlantic contemporary, *Le Yacht*, has published its second "Annual," a little volume full of interesting and valuable material to French yachtsmen. What with complete tide tables, magnetic variation, calendar, list of clubs, knotting and splicing, French harbors, etc., the book is certain to be found in the Skippers' libraries of the rapidly increasing fleet of French yachts.

JERSEY CITY CANOE CLUB.—At a general meeting of the Jersey City Canoe Club, held in Jersey City on the 11th day of February, the following officers for the ensuing year were elected:—Commodore, Chas. E. Chase; Vice-Commodore, Robt. D. Wynkoop; Secretary, Edward A. Ransom; Treasurer, B. Frank Newton; Messengers, Robt. J. Wilkin. The Executive Committee consists of the Commodore, Vice-Commodore, Secretary, Treasurer (ex-officio) and Marcus L. Higginbotham. The Regatta Committee are Wm. Y. Fitch, W. Harry Potts and Karl F. Bergman. A Finance Committee consisting of Marcus L. Higginbotham, E. A. Ransom and Wm. Y. Fitch was appointed to investigate and report at the next general meeting, on the 10th day of March, as to the building of a club-house. A committee was appointed to arrange with the New York Canoe Club for canoe races on every Saturday. The Jersey City Canoe Club was organized one year ago and now has a fleet of twelve canoes, with many more in prospect this season.

BUFFALO YACHT CLUB.—Officers for the year:—Commodore, C. L. Bryant, of yacht *Cypnet*; Vice-Commodore, G. M. Cordell, of yacht *Fledgling*; Treasurer, Jas. S. Prevost; Secretary, P. G. Cook, Jr.; Messengers, A. N. Chilcott. Regatta Committee:—J. J. Williams, Chairman; T. P. Frank, Edward P. Fields. House Committee:—H. A. Vedder, Chairman; G. M. Cordell, J. J. Williams. The fleet consists of six sloops and five schooners. The annual regatta will be sailed about the middle of July. Delegates to the National Yachting Association:—E. E. Benedict, H. B. Doyle and C. Leo Abel.

RACING IN 1879.—The following additions and revisions of our Lists of Racers and Winners have been collected since their publication:—

LIST OF RACERS.

May 30th.—S. F. Y. C. Hegatta. Pavn, not Pavn.
June 21st.—Bn. Y. C. Hegatta. Adrienne, not Breeze, won.
July 7th.—Name of winner was reported as Titania.
Aug. 7th, not 9th, was date of Newport Y. C. Regatta.
Sept. 19th.—Cat-bow sweepstakes. Add seven entries.
Sept. 22d.—S. Y. C. Race. Add five entries.
Oct. 16th.—18th.—S. Y. C. Race. Four, not fourteen races.

LIST OF WINNERS.

Abbie M., not Abbie II.
Capt. Gwinn, not Capt. Given.
Annie M., belongs to B. Tolman.
Clara, E. B. Y. C. Four races, not three.
Coquette, Salem Y. C. Cat, not sloop.
Daisy, E. B. Y. C. Two races, not one.
Dream, E. Y. C. Add one second prize.
Edith, Bn. Y. C. Did not win a second prize.
Edna, Osterville. Add one second prize.
Ella, Q. Y. C. Won one race of a series, not a champion.
Ella, Q. Y. C. S. L., not S. C.
Emma, B. Y. C. Four races, not three.
Fair, Bn. Y. C. Nine races, not eight, and two first prizes, not one.
Titania is a canoe, and add one first prize.
Hector, E. B. Y. C. Five races, not four.
Hollen, B. Y. C. Won one championship, add this, and take off one of the two stars against her name.
Ida May, Doughkears. Won one first prize.
Iola, Fairhaven. Did not win a first prize.
La Belle is B. 34, not B. 37.
Lady Emma. Four races not three.
Leona, Salem Y. C. A championship mark, not a star.
Lily, H. N. S. Y. S. Owner's name is Weeks, not Meeks.
Mischief, S. Y. C. Take star out of column of races and insert a star.

Sunbeam. Nine races, not eight.
Unknown. Six races, not four.
Wanderer, Calif Island, belongs to J. Turner.
Carrie Morgan, Oshkosh Y. C., sailed six races, winning first money five times.

DEIST.—South Boston Yacht Club may build a new club house this season.—The Boston and Dorchester Clubs are the only ones owning club houses in Boston waters. In the vicinity are those of the Lynn and Salem Yacht Clubs.—*Mariquita*, ketch sloop, is receiving new deck and cabin house in Boston; she remains in the Quincy Yacht Club.—Capt. Bass, of Boston, who owns the smart little *Rocke*, has not up a new rig for setting spinnakers on small craft.—McManis is the Saviour of Boston, and makes the mullin for the fast ones there.—Capt. Harris, of Day View, Boston, has finished his 45th yacht, a cat 21-ft. long

now for sale.—A. L. Jackson, Dickens st., Dorchester, Mass., is building a keel cat 23-ft. long, 11-ft. beam, for the S. B. Y. C.—S. A. Additt, Mr. Peabody, is having spinnons clapped on her side, and will receive a new pilot-house.—The old *Julia* is being re-decked near Chelsea Bridge, East Boston.—Pierce's now out for the Mediterranean will be shipped abroad shortly.—The new yawl built by D. J. Lawlor, in East Boston, has four tons and 800 pounds of lead in her keel, and is a very stylish craft throughout.

BRIGHTON YACHT CLUBS.—Brighton Sailing Club has 232 members. Royal Alfred, 230 members and 153 yachts. Royal Claret, 200 members and 230 yachts. Royal Irish, 300 members and 50 yachts. London, 450 members and 312 yachts. Royal Southampton, 600 members and 215 yachts. Royal Victoria, 323 members and 114 yachts. And many others of the same caliber. That looks like business.

SLOOP, CUTTER AND CENTER OF GRAVITY.

Editor Forest and Stream:—

Mr. Center having given a reason for his unwillingness to accept my proposition to *Yachts* or any other 40-ft. keel yacht, it but remains that I should thank him for his unintentional incitement of my claim that the well-designed sloop is handier and more easily managed than the cutter. Mr. Center being well known as a long-time amateur tar, his opinion carries weight. From Mr. Center's standpoint—the deck of a cutter—a my proposition that two 40ft. yachts, handled by two men each, should make the circuit of Long Island in rough weather, is perhaps a wild one.

I am well aware that the cutter would require from four to six men if any speed were expected of her, but whether Mr. Center knows it or not, my boat—which is not a sharp after all—can accomplish the trip easily and speedily with one man and a boy for all hands.

This covers the whole ground of my claim as to the relative merits of the two types of boat. THOMAS CLAPHAM.

Roslyn, Feb. 10th.

THE NATIONAL YACHTING ASSOCIATION.

In a recent issue we publish a letter from the Honorable Secretary of the Royal Nova Scotia Yacht Club, setting forth the fact that his club sailed more races in '79 than any other in America.

It is little to the credit of yachtsmen this side of the Canadian border that the Halifax club, with a much shorter season, should take the lead in yacht-racing on this continent. Their entries are nearly all cabin yachts, we believe, and go to show how much sport can be got out of racing, when a sensible rule of measurement, fixed, ballast, and the authoritative sailing rules of the British Y. R. A. are enforced. Comparing the activity, the large percentage of the total fleet entered, the successful management of this club, with the meagre display of fighting flags and the first-class racing among our large clubs much more favorably stated, it becomes only too evident that, as racing yachtsmen, we have quite as much to learn as we have as cruising tars. There we have, on one hand, a population of not much over 50,000 supporting in inclement waters and a short season an energetic club of cabin yachts which sailed eleven races in one year; and here, in New York, with a million or more to draw upon, the leading club is actually engaged in considering the advisability of giving up racing altogether, and the other clubs are equal only to a race or two, and one club not even equal to a single match or a solitary cruise.

And in face of such an exhibition so unfavorable to ourselves, there are individuals so blinded by narrow "spread-eagle" prejudice as to claim that in yachting, racing or cruising, America leads the world, when, in fact, we are behind every nation which follows the sea for sport, especially in view of our unequal facilities for indulging in all the branches of this pastime. The corn might just as well be acknowledged; there is no sense in pretending what we are not. How is such a condition of backwardness to be explained?

First, the abominable, lubberly custom of shifting ballast among the junior clubs deters real yachtsmen from building small cabin crafts (the nursery of the seaman) to be enrolled upon their club books, for the honest yacht with the sailor-owner receives no sympathy from the sand-bag athletes, and the larger clubs debar from their books all sorts of moderate tonnage, either by statute, as in the N. Y. Y. C. and E. Y. C., or by the overwhelming interests of large yachts which overcloud the smaller "low-floors" efforts to such a degree that they are left out in the cold, and yet have not strength or enterprise enough to form a genuine racing club among themselves, in which not the length of one's purse, but a spirit of pluck and emulation in seamanship shall constitute the cementing influences.

Second, The prevalence, in consequence of the above, of a type of broad and shallow "open boats," unfit for most duties rightfully to be expected from a yacht, and in reality more "sailing machine" than cruising craft; lacking in the most ordinary requirements of storage and comfort; discouraging cruising and "yachting" in the full meaning of that term among owners of small craft; unhandy in rig; dangerous and treacherous in qualities; costly and generally worthless; contributing to the advance of nothing, unless making business brisk for the undertaker of the nearest town.

Third, The want of combined action, the localism and cliqueism which demands of every village owning half a score of yachts —boats is the proper term—the needless expense, red tape and ludicrously liberal distribution of office entailed by the formation of a "club," instead of joining a strong and established union of the kind in some other port. The low fees charged for entrance and the petty yearly subscriptions, leaving the majority of these infant organizations on the brink of financial distress from the very word "go," and necessitating racing for pleasure purses and tinware, and the short-sighted custom of opening entries only to the buccolic wonders that happen to constitute the "club."

Fourth, The tendency to make society affairs, excursions and drinking bouts the chief sailing, usually at the expense of the club instead of those participating in the social excesses.

Fifth, The practice of putting society leaders at the head of affairs, instead of active and experienced sailing members, and the general encouragement of the former class at the expense of the latter.

Sixth, The distressing mixture of class distinction and, time allowance and sailing rules; the want of confidence among owners as their slavery to sailing masters, and the slinking of the Anglo-Saxon's love for present models to safely take to distant cruising and the desire for large enough tonnage to overpower the sea; they are likely to meet, thereby confining "foreign" to the limited class fortunate enough to possess "big" craft.

Yachting in America is by no means what it might be—what it

ought to be. The National Yachting Association has a Herculean task before it, and work enough ahead for many years, if it is to be true to its duties, and live up to public expectation. On all the above subjects its voice should be heard in time. When fully constituted and safely established, the National Yachting Association will have upon its shoulders the responsibility of lifting the sport from its present crude and desultory ways to paths more dignified, more popular, beneficial, logical, liberal and lasting.

NATIONAL YACHTING ASSOCIATION.

New York, Feb. 13th, 1880.

Editor Forest and Stream:—

The committee representing the yacht clubs who initiated the movement for the formation of a National Yachting Association have decided upon calling a meeting of the delegates appointed by the clubs, to be held on Monday, March 1st, at 8 o'clock P.M. at the St. Denis Hotel, corner Broadway and Eleventh street.

Yacht clubs who have not yet appointed delegates are respectfully requested to do so before the 1st of March, in order to have as complete a representation as possible. JOHN TRICK, Sec.

A NATIONAL RULE OF MEASUREMENT.

Editor Forest and Stream:—

IN your issue of the 6th inst. a discussion has been inaugurated which is of more importance to yachting in America, I would state than any other. I refer to the true method of "measurement." It seems to be conceded that what is needed is some measurement which shall not encourage the construction of a class or type of yacht in which the qualities most desirable in a sea boat must be materially sacrificed to insure her winning races. It is admitted that the English method of measurement has resulted in the building of one kind of yacht for racing and another for cruising. Is not this attributable to a rule of measurement which forces an absurd construction in order to win in their races? On the other hand, the American measurement, based upon length alone, appears to be equally vicious. It obliges the yachtsman who expects to win in our summer winds and waters to give his craft an abnormal breadth of beam, which impairs her seagoing qualities.

Such rules of measurement must be injurious in their ultimate effects upon this fascinating and manly sport. It reduces the yacht to a racing machine, in which no man cares to cruise for health and recreation, in preference to a good "all round" craft. Of the two rules mentioned, the American measurement, "inferred" by Mr. Smith, that of "cubic contents" and that of "length and beam," it seems to be admitted that the first mentioned is theoretically and practically correct when applied to yachts of the same or substantially the same freeboard. In such cases no yacht, whatever be her style or type, is handicapped in any way.

But when one yacht has more freeboard and better seagoing qualities, she gains nothing in racing qualities thereby, but rather loses on account of the center of effort being higher, and yet she is handicapped by it. This is a fair statement of the argument and of the difficulty encountered in the "cubic contents" system from those who have tried it. As to the other system of measurement—"length and beam"—if I understand Mr. Smith, he admits that theoretically it gives an advantage to the narrower beam or "cutter type" of yacht model, but thinks our summer weather will not favor a very narrow type for racing.

To this I am slow to agree. The yachtsman goes in to win, and very properly. That is his business. He will not take about a flat-ironed craft in America all summer and take about a flat-ironed craft as a sea boat and otherwise in order to come out ahead in two or three races. He will navigate a craft of about the general proportions of the same flat-iron, set edge up, in England all the season and stand the heat, and hatches battened down and decks constantly drenched in a sea way for the same object.

If, therefore, a rule of measurement is adopted in America which gives advantage to a narrower beam and the American yachtsman finds himself elbowed out by it, what would be the probable result? Summer weather, I believe, would not stand in the way of a moment. Our Yankee yachtsmen would take to narrow beam that would either better than the prototype; they would shave down the English flat-iron set edgewise until it would hardly cast a shadow, if possible, in order to win.

As a delegate to the National Yachting Association seeking information, I wish to propound a question or two for answer. Reverting to the "cubic contents" system, we have:—

1. A method of measurement which is theoretically and practically correct, but fair between two yachts of however different type, provided they have the same freeboard.

2. Every lack of additional freeboard added to either of these yachts over the other is only detrimental to her racing qualities, although it may be of advantage to her seagoing qualities.

If this is so, the question I wish first to ask is, why not leave off all the "cubic contents" due to this added freeboard in her measurement? It would not in a race be of value to the other yacht. It seems to me some rule can be adopted to practically accomplish this. There is certainly some minimum limit to the freeboard of a yacht to render her a decent vessel. Indeed it seems to me that there is a limit, proportioned to the length, below which it would not be advantageous to reduce the freeboard. This being so, could not yachts be divided into classes according to length or otherwise, and a line of freeboard be established for measurement at a certain height above the water for each class. Then let all the "cubic contents" below a horizontal plane passing through this line be estimated, and the yacht which actually has freeboard extending higher would not have it counted against her in "cubic contents."

Any yacht which was built with less freeboard than the height of this measurement line would probably lose more than she would gain, because, without doubt, she would not be fit for any average sea, and she would lose by the submergence of less counter at when by the wind.

Or if advisable, any yacht so built might have her "cubic contents" estimated, as if she was built up to this measurement line, on the ground that she could not be a suitable vessel unless built up, and should be handicapped for her departure from correct naval construction.

If in any way we can devise a modification of the "cubic contents" system which shall be fair as between all styles of yachts, substantially it will be of great benefit, because for all the parts of the yacht below the water line this system is conceded to be a fair one, and having a definite and unvarying line in the water line itself deal above that established horizontal plane to measure this visible portion of the yacht, we ought to be able to reduce the conditions to such an equality as to give fair play to any construction of naval architecture in comparison with any other.

Let us hear from the champions of each system, and we shall all probably learn from the discussion. DAVID HALL HICK.

Boston, Feb. 10th.

MEASUREMENT.

In order that a question, simply enough in itself, may be explained to the best advantage, it will be advisable to first obtain a clear understanding of the purposes to be kept in view. The object, and the only object, of measurement and time allowance among yachts is to eliminate differences of size, so that the real comparative value of various models may be established by the test of racing.

It is quite manifest that if one vessel outsails another smaller than herself, the result is not a true indication of the relative merits of the two, until a correction has been applied to the larger one and whereby the effect of her excess in size will be eliminated—wiped out, as it were. The result as it would then stand represents a just comparison of the value of the models for speed. We established from this the first axiom:—

I. Measurement and time allowance are applied for the purpose of eliminating differences in size, and for that purpose only, so that variety in size may not be a hindrance to the practical comparison of variety in shape.

The object settled clearly in our minds, the next step will be naturally directed to the means by which the ends of measurement and time allowance are to be attained.

That the reasoning adopted shall be logical and free from all secondary disturbances whereby side issues would be created, we will devote attention to the simplest and plainest case imaginable. A. and B. desire to match their yachts for the purpose of deciding whether A's *Finback*, of 100 tons, or B's *Shellback*, of 120 tons, possesses the lines or shape most favorable to the development of speed. The secondary considerations of wind, tide, salinizing, four bottom and the like, we presume to be equal in both yachts, so that the question at issue will not be overshadowed by irrelevant matters. The race is sailed, and *Finback* leads by 10m. at the finishing line. It will not be pretended that the 10m. represents a correct gauge of the superiority in point of speed of *Finback* over *Shellback*, for the latter has had the advantages of the momentum due to her excess of twenty tons. If, with this advantage in her favor, the rival *Finback* has, nevertheless, beaten her by 10m., the question becomes, by how much tons would she have been beaten with the momentum of twenty tons ("power," among yachtsmen) obliterated? The answer to this is to be looked for in the tabulated allowances which experience has shown to be the amount due as a correction for the excess of 120 tons over 100 tons. When this "allowance" has been added to the actual period (10m.) by which the larger boat has been outdistanced, then we will have a correct expression in time of the difference in the value of the two vessels' models for speed. Certainly nothing can be well plainer than this, and since sound logic compels us to allow for differences in size, our second axiom follows as a matter of course:—

II. Since is the correct basis upon which time is to be allowed, and therefore a theoretically correct system of measurement must be based upon size.

If a little digression be permitted, we will here explain a phenomenon, common enough in practice but explicable upon a rational basis to comparatively few, and also thereby meet an objection which we know will occur to almost everyone when trying to accept, for once and all, the two axioms above mentioned. We allude to the well-known fact that size *per se* is an advantage altogether apart from model, and that size should be paid for to the full extent, even though the excess may be used for filling up a vessel's model, and deteriorating from her speed. To obtain an accurate and correct estimate of her altered model in competition with another, it is necessary to make her account in full for the increase of size, in spite of such increase having entered

with speed, for an increase of size of itself carries with it an increase of "power," no matter what its effect on model one way or the other, and time allowance is granted, according to axiom I., for the very purpose of neutralizing such a difference in power, and not in the results of speed. A little reflection on this point may be indulged in to advantage, for it is through failing to have axiom I. before their eyes that many confound the purposes of time allowance, and declaim wrongfully against making a vessel pay for heavier tonnage because the excess may not have promoted her speed—in fact, may have made a slower boat. But then it is just to find out how much slower than another she may have become that she must, nevertheless, pay for her increased size. This must be clearly understood, and anyone wishing to advance a scheme of measurement and allowance must first master this proposition, and never get astray, or his logic will not bear the crucial test of close reasoning.

Why a larger vessel has a natural advantage over a smaller one will be gleaned from the following figures:—

Tonnage.	Speed.	Momentum.	Ratio of Resistance.
100	2 knots.	200	Say 2.
200	2 knots.	400	Say 3.
100	6 knots.	600	18
200	6 knots.	1,200	36

The comparison is made between schooners of 100 tons and 200 tons. Assume that a certain wind will drive both alike fast (2 knots) owing to the larger one having a somewhat clumsier form, and that their resistances can be represented by 2 and 3 respectively. When the speed of the two has increased, let us say, to 6 knots, in consequence of a freshening of the wind, the momenta will have grown from 200 to 600 and from 400 to 1,200, exhibiting a much wider limit at the higher speed than at the lower.

Speeds.	Ratio of Resistance.	Difference.	Ratio of Difference of Resistance due to difference of form.
2	2-3	1	0.5
6	18-36	18	1.0

If the whole of this increase in momentum be necessary to overcome the increased resistance offered by the clumsier model, then the two vessels will still remain sailing side by side. If, however, only a portion thereof is required to balance the increased resistance, then the remaining "power," or momentum stored up, will serve to drive the 200-tonner at some speed greater than six knots, and she will forge ahead of the smaller schooner in spite of the latter's finer model. To continue upon our assumption: The resistance in ordinary models increases as the square of the speed at low velocities, hence that of the 100-tonner will at six knots be represented by eighteen. That of the 200-tonner, however, we accept as increasing in a slightly faster ratio owing to bluffer form, and if taken as the 2^d power of the speed will amount to 36, as noted in the second table above. The same table shows in the third column the differences between the resistances and in the fourth those differences have been referred to the ratios of the smaller schooner. Now it is evident that if at two knots an excess in momentum of 200 was required to overcome the larger vessel's clumsiness, the amount required at six knots will have increased above 200 in the same proportion as the ratios 0.5 and 1.0. In other words, 400 out of the difference between 1,200 and 600 will be used up in overcoming the excess of resistance due to inferior form, leaving a momentum of 200 as yet unused. This will exert itself in driving the larger vessel at

a greater speed than six knots, from which it follows that when the 100-tonner requires that rate the 200-tonner will go by her.

From the above it will appear plain enough that to obtain a correct expression of the superiority of the smaller vessel's form for speed the larger one must be made to account for her total excess of size (100 tons), for the whole 100 tons has come into play—first, in making up for want of good form; and second, in actually driving her ahead. In estimating the difference between two forms it is manifest that difference in size must pay, no matter where found. Axiom I., therefore, holds in all cases.

The next requisites will be granted by all without argument

III. A perfect system of measurement for time allowance must not place a premium upon any one form in particular, but must leave the designer absolutely untrammelled in all directions alike.

Any rule which takes into account only one or two dimensions necessarily compels the designer to extend in the directions or direction not taxed. Only one special form or type can be the outcome of such a rule, independently altogether of the desirability of such type for other purposes than evading just compensation to rival in a race. Ample proof of this is to be found abroad and at home. In England, where length and beam are taxed, yachts grow narrower and deeper from year to year. In America where length generally supplies the standard, yachts grow shorter, stumpler, wider and deeper with each succeeding summer. On the other hand, the Royal Nova Scotia Y. S. and its system, in which all three dimensions are considered, not only thoroughly satisfactory from a theoretical point of view, but capable of matching the greatest varieties in type from one extreme to the other.

IV. No system of measurement should be permitted which has a tendency in practice to produce undesirable or dangerous peculiarities.

No words need be wasted upon this. If it is found in practice, as has been asserted, that measurement by size has a direct influence upon freeboard, and will compel owners to cut it down to the minimum permissible for summer racing, thereby losing in cruising comforts and endangering their vessels in squalls and storm seas, it is not very difficult to circumvent this objection. Adopt a standard "depth for measurement" for different classes or sizes of vessels, make such depth depend upon length or other suitable factor, and the yacht designer will at once build up to the limit and not short of it. Danger of low freeboard will then be removed.

V. The system must admit of ready application and verification in practice.

Though the exact size of a vessel is to be attained only from drafts or plans, a sufficiently approximate rule can be devised for every-day practice which will place the adoption of a theoretically correct system within the capacity of the smallest club. Substitute for the gauging or calculating of cubical contents the simple multiplication of the three principal dimensions, length, beam and "standard depth," and the whole problem has been solved. A tape line, a plumb bob and a man who can read numbers is the whole stock in trade. Such a rule is founded upon logic and common sense, is unassailable mathematically, and is the only one which will in addition conform to the demands of the five axioms mentioned in this article.

Any rule which does not conform to them is faulty in conception, and certain in the end to prove vicious in effect.

—A cricket match was played at Acapulco, Mexico, in 1876 with a temperature of 135 degrees in the sun.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	6 " .50	1 " 1.00	2 " 1.50	3 " 2.00
Amount to remit us, 3 " .75	6 " 1.50	1 " 3.00	2 " 5.50	3 " 8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00
Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.	

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates. A copy of FOREST AND STREAM for one year. A three-piece double-ferule, lancewood tip, full mounted, polished brass, Trout or Bait Rod.	Coues' Field Ornithology. One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks. One Russin-leather Fly-book, and one dozen assorted Flies.	One five-foot lancewood Bow, Horn Tips, and one dozen 2 1/2-inch Arrows. One pair Club Skates.
To any Person sending us, before July, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Coues' Key to North American Birds.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickled-plated Club Skates. One Parlor Air-Gun.

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

New York City, N. Y.

New York, January 1st, 1880.

For Sale.

**FOR SALE IN PART OR WHOLE,
Very Complete Outfit**

**BREECH-LOADING GUNS, RIFLES,
And Fishing Rods,**

Of finest quality, most desirable styles
and made by manufacturers of highest
reputation.

The property of a gentleman, who on account
of ill health wishes to dispose of them—
1 W. & C. Scott & Sons premier quality, 32x12, 7 lbs.
1 W. & C. Scott & Sons premier quality, 30x12, 8 lbs.
1 W. & C. Scott & Sons the quality, 30x12, 12 lbs.
All of the above in sole leather cases with fix-
tures complete.

1 W. & C. Scott & Sons first quality, 30x12, 7 lbs.
1 Wm. Moore (made by W. & C. Scott & Sons),
32x16, 7 lbs.

These in enameled cases with fixtures complete.
1 Winchester Repeating Rifle, model 1876, pistol
grip.

Peep & Beach combination, vernier and wind
gauge sights, in leather case with suitable
ammunition.

1 Winchester Repeating Rifle (carbine), model
1873.

1 Remington Breech-loading Rifle, — inch bbl.,
22-calibre.

1 Stevens New Model Pocket Rifle, 18-inch bbl.,
32-cal., with extra barrel 22-cal., in mahog-
any case.

1 Wesson Breech-loading Rifle, 28-inch barrel, 32-
calibre with extra barrel 24-inch, 22-calibre,
in leather case.

1 Leonard 3-joint, 6-section Split Bamboo Trout
Fly Rod with extra tip and tip case.

2 Trout Rods, 3 joints each.

4 Joint Rods suitable for general fishing.

The above articles have been but little used,
never abused and in a condition almost equal to
new. For further particulars and price, address

TRIMBLE & KLEINBAUER,
200 W. Baltimore St., Baltimore, Md.

Feb 19-11.

Trees.

PARTIES who contemplate planting
largely of fruit or ornamental trees
are invited to visit the nursery of F. H.
Foster at Babylon, Long Island, N. Y., and ex-
amine his extensive stock; a selection out of
30,000 specimens; an assortment well adapted
to ocean exposure planting. All at lowest
rates. Feb 19-11.

FOR SALE AT A BARGAIN—Two Nichols and
Lefevre breech-loading shot guns, one 10
bore, 32-inch, 10 lbs.; the other 10 bore, 30-inch, 9
lbs.; both "O" quality; cost \$150 each; will be
sold for \$100 each; both laminated steel, rebounding
linings, pistol grip, patent fore-end, and
absolutely new. Address B. B., this office.

FINE BREECH-LOADER FOR SALE—P.
Webb & Son, maker. Pistol grip, top ac-
tion, rebounding locks, extension fore-end, 10
bore, 32-inch. Every improvement on this gun; ele-
gantly finished; used but very little; perfect
order; lowest price, \$55. Address "WEBB'S
BREECH-LOADER," office "Forest and Stream,"
Feb 19-11.

For Sale,

250,000 BROOK TROUT FRY,
At reasonable rates. Address for prices to
J. B. & F. N. EDDY,
Randolph, Cattaraugus County, N. Y.

WILD RICE per bushel, \$3 00
limited. R. VALENTINE, Janesville, Wis.

Wanted.

AUDUBON'S BIRDS.
ANY GENTLEMAN having a set of Audubon's
birds, half size, in good order, which he
would like to sell for \$75, will please ad-
dress at this office. Jan 29-11.

OWLS WANTED.

NATIONAL AMERICAN KENNEL CLUB.

New York, Feb. 17th, 1890.

PURSUANT to the authority invested in me by the National American Kennel Club, at its meeting held at Patoka, Ill., Nov. 21st, 1879, I have appointed as Secretary of the N. A. K. C. Mr. CHARLES DE RONGE, of No. 51 Broad street, New York City, who has accepted the position, and entered upon the duties of his office.

All entries for the Field Trials of the Club and for the American Derby of 1889, for the forthcoming second volume of the N. A. K. C. Stud Book, all nominations for membership, and all communications on business of the Club, should be addressed to
CHARLES DE RONGE, Secretary N. A. K. C., (P. O. Box 944.) 51 Broad St., N. Y. City.

CHARLES H. RAYMOND,
President N. A. K. C.

National American Kennel Club.

FIELD TRIAL DERBY OF 1880

THE first American Field Trial Derby will be run under the National American Kennel Club Rules, about the third week in November, 1880, and place to be hereafter announced, for setter and pointer puppies whelped on or after APRIL 1st, 1879.

First Prize, \$100; Second, \$100; Third, \$50. Entries, Five Dollars each, to be paid at time of entry; Ten Dollars additional each for starters, to be paid before starting.

Entries, giving full particulars as to color, markings, sex, pedigree and name, must be made on or before APRIL 1st, 1880, to the Secretary of the National American Kennel Club.

Any number of dogs, the property of one owner, can run for this stake. The names and pedigrees of all the puppies entered will be sent to all the sportsmen's papers for publication, and the points before the winning dogs in the same ratio or proportion as the stake is divided.

ENTRIES CLOSE APRIL 1st, 1880.
For blank forms of entry apply to
CHARLES DE RONGE,
Secretary N. A. K. C.,
(P. O. Box 944.) No. 51 Broad St., N. Y. City.
Feb 19-11

The Kennel.
Neversink Lodge Kennels.
The following celebrated Dogs are in the stud.
Dogs:
St Bernard dog, "Marco," rough coated, two years old; a magnificent animal—B. J. Channing Macdonald's stock—second prizes Hanover Show and Rochester.
Newfoundland dog, "Keeper," four years old; first prize Westminster Kennel Show, 1879.
Pointer dog, "Crockett," liver and white; one and a half year old; out of Lord Sault's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show.
Blue Bolton setter, "Decimus Dash," eighteen months old; sired by Llewellyn's celebrated Dash—a magnificent stud dog—never exhibited.
Irish setter, "Rover II," pure red; son of Macdonald's champion, "Rover." Never exhibited.
English setter, "Tanger II," a pure bred Laverack, son of Macdonald's celebrated "Tanger." His get won first at Hanover and Paris shows, and second at Puy Stakes in Eastern Field Trials 1879.
Stud fee, \$25.00.

For Sale.
The get of the following thoroughbred Bitches.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING and BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, es-
tablished in 1822, have maintained their
great reputation for seventy-eight years. Manu-
facture the following celebrated brands of Pow-
der:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequalled in strength,
quickness, and cleanliness; adapted for Glass
Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 8 (fine), burning slowly, strong,
and clean; great penetration; adapted for Glass
Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine
grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FFG and FFGG. The FG for long range rifle
shooting, the FFG and FFGG for general use,
burning strong and moist.

SPORTING, MINING, SHIPPING, and BLAST-
ING POWDERS of all sizes and descriptions.
Special grades for export. Cartridge, Musket,
Cannon, Mortar, and Mammoth Powder, U. S.
Government standard. Powder manufactured
in order of any required grain or proof. Agents
in all cities and principal towns throughout
the U. S. Represented by

J. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG
Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square
cansisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. cansisters and
3 lb. kegs. A fine grain, quick and clean, for up-
land and prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. cansisters
and 6 and 12 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest, or water shooting,
it ranks any other brand, and it is equally ser-
viceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of
25, 12½, and 6 lbs. and cans of 5 lbs. FFGG is also
packed in 1 and 5 lb. cansisters. Burns strong and
moist. The FFGG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting"
FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POW-
DER; also, SPECIAL GRADES FOR EXPORT,
OF ANY REQUIRED GRAIN OR PROOF,
MANUFACTURED TO ORDER.

DITTMAR POWDER.

Champion Shot Gun and Rifle
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is
absolutely safer than gunpowder, as it cannot explode when not confined, and does not
strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion
wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and
all the leading shots, use DITTMAR POWDER in their matches. Our challenge
to shoot a long range rifle match, as published in our circulars, was never accepted,
and is yet open to the world. Address

Parmehenee and the Rangeley Circuit.

OUR party, consisting of N. A. Roberts, F. Stevenson, Jr., F. S. Fay and the writer, left M. on the morning of Aug. 19th, 1879, for the woods. At Boston we purchased a round trip ticket for eighteen dollars, and taking the Eastern Railroad at 8.30 A.M., reached Portland at 12.30 P.M. At this place a portion of the train is transferred to the Grand Trunk depot, thus avoiding expense of carriage across the city. At the Grand Trunk depot a fair dinner is furnished for fifty cents, and at 2 P.M. the traveler resumes his journey, via the Grand Trunk Railroad. Sixty-three miles takes him to Bryant's Pond, where he arrives at 4.20 P.M., and there he finds a coach in waiting to take him to Andover, twenty-one miles. As soon as the coach is loaded we move onward, and in a couple of hours' time we reach Rumford, eight miles inland, where horses are changed, and we get a very comfortable supper. After a half hour's delay the driver cracks his whip, and we resume our journey in the deepening twilight. Shortly after leaving Rumford we move cautiously down the west bank of the Androscoggin River, but when we reach the border, look in vain for a bridge. Before us is a stream of some thirty rods in width, with a brisk current, whose waters are dark and threatening, and over which we are to be transported. There is no ferryboat, only a small floating wharf, just large enough to hold a coach and four, but with no safeguards. Without ado, however, the horses are driven thereon, but there they are sure to stop. "Never fear," says the whip; "they don't love the water any more than you do." Fairly upon it, and the ferryman, by means of ropes connecting with a large cable tethered to either shore, draws the nose of the wharf up to the cable, and the current setting against it, it starts like a thing of life, and in a few minutes the horses dash up the opposite bank. The sensation is both exciting and agreeable.

Evening is now fairly upon us, and we creep slowly along in the darkness thirteen miles further, over a rough and hilly, but picturesque, road, till we reach Andover, a matter of three hours' journey, arriving usually from 9 to 9.30 P.M. At Andover are two good hotels—the

Andover House, the ancient hostelry, and French's, lately built.

From Andover to "Arm of the Lake," on the Richardson (or "Welokenabook") the distance is twelve miles, but no Concord coach takes one there; the road forbids, for it is rough, rugged and rocky, and it requires a buckboard to accomplish the journey. Leaving Andover at 8 A.M. you soon leave denuded fields behind, and plunge into wooded lands, where tall and shapeless trees obscure the sun and partially shut out the light of day, the only opening visible being a rugged, narrow road, which winds its sinuous course through the unbroken forest.

About noon you emerge from the wilderness to find yourself once more in the sunshine upon the borders of a beautiful lake, the Welokenabook, where, planting yourself upon a rock or stump, you possess your soul in patience, till in the distance you see a faint trace of smoke rising heavenward, and soon the little steamer, the *Welokenabook*—a mere toy—approaches the landing. An hour is spent after its arrival in "wooding up" and getting things aboard; then the little crew slowly worms you across the lake to Middle Dam, four miles distant in miles and forty-five minutes in time. "Anglers' Retreat" is the name of the new "hotel" that holds out its invitation to receive you, and as there is no "opposition" house here there are no vociferating hackmen clamoring in your ears the various hotels they run for; but you get quietly off the boat and pursue the even tenor of your way up a long plank walk to the backwoods retreat, where you are kindly taken in charge for the moderate sum of \$1.50 per day. The old Retreat has outlived its usefulness, and is now falling to pieces from gradual decay. Worms find a home in its rotting timbers, and horses and cattle find protection from the inclemency of the weather beneath its roof. What an ignoble use to dedicate its historic walls to! How many a merry gathering have its timbers witnessed! How many jolly songs and cheery laughter have its primitive walls reechoed!

Alas! never more will its dumb sides resound the hearty jokes that went round in those early days when few drank in the glories of this famous fishing ground. But it is not my purpose to moralize, but to paint as nearly as possible an accurate picture of this delightful country; and having reached this point in our journey let me say, taking Middle Dam as the starting point, it is my purpose to give practical information of time, distance and expense of making the Rangeley circuit, if I may be allowed the figure of speech, and at the conclusion of this article may be found a compact summary table for the scrap book of the sportsman.

From Middle Dam there are two routes to Parmehenee, viz., via Indian Rock, and the Megalloway. Having chosen the latter my description will be by that way. The old carry from Middle Dam to Umbagog—Cedar Stump—has been abandoned, and the new carry now follows the old road about three miles, when it turns to the northward and strikes the east arm of the Umbagog, five and a half miles all told from Middle Dam.

The steamer *Diamond* at present makes three trips weekly, starting from Upton about 8 A.M. Tuesdays, Thursdays and Saturdays, reaching the arm at 9 A.M.; the old carry from Middle Dam, turning up river reaches Brown's Farms, on the Megalloway, about four miles, where a comfortable spring wagon takes you to the farms, two miles distant, for dinner. A buckboard leaves M. D. each steamer day at 7 A.M. The road is very rough and rocky and you ride for \$1 or walk, as you choose, sending your luggage by buckboard at seventy-five cents per 100 pounds. If you ride, the fare of \$1 includes the carry of your luggage.

At Brown's Farms you make a bargain to carry you to Fred. Flint's camp, at the head of Ariscoos Falls, seven miles, or previously arrange for boats to meet you at Brown's and pull to the foot of the falls and then carry around. The former is the better way. Five dollars took our party and luggage from Brown's to Flint's. From Brown's to foot of falls the road is good, but the carry around the falls is very bad, and luggage must be taken across on a buck and you must walk or take a terrible jolting.

You reach Flint's usually late in the afternoon, and if wise you tie up here for the night, for you will find a comfortable dwelling of modern pretensions—neat, comfortable beds and a good table, with plenty of milk, for Fred. keeps a cow, and I can vouch that she gives rich milk. Terms, \$1.50 per day for sportsmen and \$1 for guides.

At 6.30 A.M., Aug. 23d, we shoved our boats into the current, and the strong arms of our guides began pulling us up the Megalloway. The river at this point is some eight or ten rods wide, with no perceptible current upon the surface, yet with a strong undertow. Four miles the hour is called "good time," and as the distance to the foot of the Little Megalloway—where you disembark—is thirty-three miles, it's a pretty good day's work to make the river in one day from Flint's Camp.

The points of interest between Flint's and the Little Megalloway, i. e., the fishing points, are, from point to point—Flint's to Beaver Brook, two miles; Parker Hill Pond Eddy, two miles; Bog Brook, one mile; Narrows,

four miles; Hunter's Camp, five miles; Lower Metallic Pond, one mile; Foot of Meadows, four miles; Upper Metallic Pond, five miles; Head of Meadows, five miles; Foot of Little Megalloway, four miles; total, thirty-three miles.

As we were anxious to make Danforth's Camp by nightfall we omitted fishing en route, and at 12.45 P.M. we found ourselves at a camping spot near the Upper Metallic, twenty-four miles from Flint's. Tethering our boats to the bushes on shore, we disembarked and soon had a fine kettle of tea steeping over a brush fire. Tea, by the way, is the nectar of the guides; give them plenty of meat and they will rail as long as the oars hold out; and right here is a good time, while we are waiting for the pot to boil, to say a kind word for our guides, John Eastman and John Olsen, both faithful, trustworthy and reliable guides, and thoroughly familiar with this section of the country; ever willing to do all that is required and strictly temperate in their habits, both denying the use of ardent spirits. While waiting for steam to get up—in the teapot we visited Metallic Pond to look for deer; we saw a fresh trail but the deer which made it was *not* *not*, as so the law "was on" we didn't shoot him. After a hasty, but by no means light lunch, we resumed our boats, and lighting our pipes, drunk in the beauties of nature as we lazily and dreamily puffed our way up stream. A word about the Megalloway. It is what might be termed a flat, lazy stream, with clear and creeping waters, bordered on either hand by low lands thickly covered with spruce, tamarack, hemlock, etc., mostly soft wood. Its course is very crooked, and it often "boxes the compass" in a half-mile run. This, added to the wild, rugged aspect of the surrounding country, gives a touch of romance to the journey.

Resuming our journey we find nothing of special importance to interrupt our dreamy thoughts till we arrive within three-fourths of a mile of the landing. Here we encounter rapids too strong to stem with loaded craft, so we leave our luggage to the care of our guides and find our way along a well beaten path near the river, while our guides pole up the boats. A delay of some thirty minutes is occasioned by the rapids and we again embark, but only to make about one-fourth of a mile, when we find ourselves, at 3.30 P.M., at the foot of the Little Megalloway, thirty miles from Fred. Flint's, and our journey is over. Spiked to a tree hard by you will find these words:

"For a team to cross the carry fire two shots, and on being answered fire two more. G. S. FLINT."

Elevating our double-barrelled Parker at an angle of 45 degrees, we fired in quick succession two shots of buck, then attentively listened, when, after a little, through the branches of the tall forest trees came the sharp crack of a rifle, when again we gave two more, and in less than thirty minutes there came lumbering down upon us an ordinary stone drag, drawn by a dilapidated loping horse, which presented the appearance of an animal fed upon the provender of the country, brush. But, *nil importe*, he took our truck safely over the carry, four miles, to Parmehenee Lake, at the modest charge of five dollars, while we made the same on foot in one hour and ten minutes. The carry, after leaving the Megalloway, is less than thirty rods, and then we came to the Megalloway, where you reach "Spoff Flint's Camp," or G. S. Flint's, which is situated on the border of "Sunday Pond," which he has stocked with trout for the entertainment of his guests. His camp is a comfortable one, and, on *dit*, he sets a very good table. At this point the carry turns northward, and three and one half miles further, over a comfortable but some foot hilly path, you reach the south border of Parmehenee. At the termination of the carry is erected a flag-staff which boasts a white flag of peace. Quickly to the pinnacle we hoisted the emblem, and in a few moments our eyes were gladdened by the sight of a miniature speck a mile and a half up the lake, which upon approach proved to be a boat to take us to "Camp Caribou," the name with which John S. Danforth has christened his wilderness lodge. In twenty minutes we were all safely stowed, and in twenty more we moored our boat at his wharf, just as the hands of our watches had passed the figure which divides 6 from 6 P.M.

We were greeted by our old guide with an enthusiasm which awakened the pleasant memories of four years ago, when we first penetrated this section, and before any lodge disturbed the quiet of its waters. The cool breeze of the lake, after our hasty doing of the carry, sent a slight chill through our frames, and we were right glad upon stepping into the lodge to find a merry white birch fire blazing upon the iron hearth of an old-fashioned Franklin; and after the usual introduction to the brothers of the rod present we made ourselves at home before the genial fire glow. A short history of Danforth and his camp I am sure will not prove uninteresting at this time.

Some four years ago "Johnny Danforth" conceived the idea of planting his foot in this beautiful and sequestered spot, and to that end set about erecting his cabin on the shores of this mountain-hemmed lake; but ere he had it inclosed against the elements of the fast-approaching winter a voice of authority stayed his

hand. Again he essayed to fell the towering pine to the same end, but again were his labors stayed in their progress, and now he found that a petty jealousy of a camp proprietor was exercising its influence against his getting a foothold here. Being a stranger, with no influential friends, he was unable to get a permit from the land-owners, while he and his motives were grossly traduced by his jealous opponent. Nothing daunted, however, he now determined to anchor here. So with the indomitable pluck of a master backwoodsman, as he is, he shouldered his ax, marched up the lake, selected a quiet spot where there were no signs of a cherry blaze that beamed from his hearth, and with a few well-timed strokes laid a goodly number of the denizens of the forest low, and in a short time had constructed a raft of mighty logs, thoroughly secured together as only a skillful woodsman knows how to do. Upon this solid foundation, anchored off shore, he piled his logs and raised his cabin, and ere the winter snows visited him in earnest we find him toasting his weary limbs over a cheery blaze that beamed from his hearth.

Man has too much reverence for genuine pluck to suffer it to go long unrewarded. His indomitable perseverance won him the respect of the land-owners, and an acquaintance began which ended in a permit to erect his lodge upon a small island at the upper end of the lake, and last winter he gave the finishing touch to his now roomy and comfortable camp.

The island upon which his burglar's (three in number) are located contains about one and a half acres in area. All the buildings are framed of spruce, with spruce studs and rafters, and clapboarded with planed clapboards. All of the timbers, studs and rafters are peeled, and, there being no finish inside, their glossy surfaces give appearance of varnish, and render the rooms decidedly cheerful. The main building, which stands immediately in front, is two and a half stories high, 20x30 on the ground, and is a fine example of the "cabin," Mr. and Mrs. Pickett, formerly of Brown's farm, who attend to the culinary department and "run" the hotel for "Johnny." The kitchen and dining room occupy the first floor, and bed-rooms above. Immediately in the rear of the main room is the general comfort room, or guests' sitting room, a building 17x20, all in one room even to the ridge. A large open Franklin sends out a mellow warmth into its ample space, while the delicate "cabin," of spruce, glitters and shines in the bright, cheerful light. The appointments are simple. A small writing desk fixed against the wall, a half dozen shelves with a few books and papers, the *impetumetum* of departed sportsmen, a sink with wash bowl and towels, two small tables, a wooden bench, a few home-made chairs and a swinging hammock are all its walls are decorated with actual drafts of three large trout, caught here since the camp was erected, the largest representation having been taken by Henry C. Haven, June 1st, 1879, at Little Boys' Falls, and weighed five and a half pounds. Further back, but to one side of this building, is the lodging camp, 20x30, having six comfortable rooms on the lower floor, and six beds, all in one room, in the attic.

Through the long and dreary winter of '78 and '79 "Johnny," with only one assistant, toiled and struggled with his pet scheme, seeing no friendly face but his companion from far and near. Boards and timber were all wrought by hand, with the aid of ax, saw and plane. To appreciate the task one must see the whole affair, which is a marvel of handiwork. But I will not weary the reader with description, only simply add Camp Caribou is the most comfortable lodge I ever came across in the wilderness. Somewhat difficult of access, rates of living here are higher than in some places, being \$2 per day, or \$10 per week, including board and timber, and also, for the hungry fisherman to such fare as trout, venison, ham and eggs, griddle cakes and maple syrup, tea, coffee, etc., etc. I must be pardoned for saying a kind word for "Johnny." He is the best guide I ever went into the woods with. Eleven years of hardship in the forest primeval have given him a thorough knowledge of all that is useful to a sportsman. He is naturally very intelligent, and possesses a good natural knowledge of woodcraft, and what he does not know he acquires by the way of the learning. Trapping in winter, and fishing and hunting in summer, have given him a familiarity with the country and a store of useful knowledge. He is thoroughly honest, reliable and temperate.

The points of interest about Parmeneche are, first, the lake proper, about the shoals of which trout are plentiful, and may be taken in quantities in the season, ranging from four to six or seven pounds, and the lake itself is about three miles long by two wide, and is almost entirely surrounded by mountains, which are thickly studded with trees and thick undergrowth, and presents upon a still day a most charming picture. The most promising fishing point is Little Boys' Falls, three miles from Camp Caribou, viz., one mile to the mouth of the inlet (the Megalloway), and two miles up river. The "Falls" are a small affair, being a drop of only six or eight feet over a broken ledge, but at the foot of the pool, where large trout love to congregate. We tried our flies here, but got nothing larger than half pound.

At the outlet of the lake, one and a half miles from camp, the fishing is fine in June and September, and large trout are frequently taken here. The largest taken by our party weighed about two pounds.

Farther down the stream, about a mile below the outlet, Black Cat Brook empties into the river and trout are abundant, but not so large as above; however, they are often taken weighing from one to two pounds.

Our party remained at Danforth's five days, and, although we had trout at every meal, we had to stop catching, because we could not eat them fast enough.

Parties visiting Danforth's, if they have a taste for something wilder, will find good hunting and fishing in the back country, and, if they are not tired of the lake, being plenty ten or twelve miles back, or up the Megalloway River. Rump Pond, eight miles up stream, is a favorite camping ground, and parties can get fitted out at Danforth's for the expedition. I would remark in passing, that, to visit Parmeneche, parties need not take blankets or any outfit whatever for camping out, for they can be had at Danforth's. From the Rangely Chain to Parmeneche is now but a day's journey, however you may go, unless you prefer to idle by the way and try the favorite fishing pools which abound along the river banks.

After a pleasant tarry of five days at Parmeneche, we turned our faces homeward.

At 8:30 A.M., Friday, Aug. 29th, we bade adieu to the pleasant island, and at 9 A.M. we reached the mouth of the Black Cat, two and one-half miles, where the west and Cuscutup Rivers terminate. A few minutes sufficed to pack our goods and gather our own load, and we started across the carry. This carry is called five miles; but I have walked over a great many and value my opinion, and I enter it upon my journal as eight miles. We were all pretty good walkers and loaded light, and were three hours and five minutes making it. This, however, included thirty-five minutes in stops, making the actual time two and one-half hours. As *pride* we came upon a flock of partridges and bagged the lot—seven. We could not help it, they would not fly; and we shot them down in cold blood, not for sport, but because we wanted them for our supper.

Much has been said about this being a bad carry, but we all pronounced it an exceedingly good one. There is, occasionally, a windfall, it is true, but they are few, and now and then a steep locality, but they are not many. The underbrush is all cut away, the path well-beaten, and but few rocks beset your footsteps. I wish, indeed, I might never encounter a worse.

Reaching the banks of Cuscutup River about 12 M., we waited thirty minutes before our guides came up. It should be borne in mind that they carried about seventy-five pounds of luggage each, which may explain their delay.

It rained quite hard at spells while crossing, and we were somewhat wet when we got over. We built a fire, however, and as the rain held up we got pretty nearly dry by the time our guides arrived. We found our boats in waiting to take us down the river; and I will remark by the way that Danforth keeps boats constantly at both ends of this carry for the accommodation of sportsmen going and coming.

After a hasty lunch, which all did ample justice to, we started down the river, and pole our way down the narrow and shallow Cuscutup a distance of eight miles, where we encountered rapids, and leaving our boats at the head of the same, again shouldered our luggage and made a carry of a half-mile to the foot of the rapids, where other and better boats awaited us. At this point the rain came heavily upon us, and we were glad to avail ourselves of a friendly tent which a brother sportsman had erected here, but who at this time was completely away. About 1 P.M. the rain cleared away, and we continued our rubber coats and pushed our boats into the current. The stream now becomes wider and deeper, and our guides bent to their oars. Shortly after starting the rain came in torrents, enlivened occasionally with thunder and lightning. One of our party discharged his gun, which burst a cloud in our immediate vicinity, and its contents threatened to deluge us for a few moments, but by the time we had bent our heads down to the rapids to Indian Rock the distance is eight miles, viz., four to the head of Cuscutup Lake and four more across it to Indian Rock.

Two hours' pulling took us to Camp Kennebec at Indian Rock, which is situated about one mile up Kennebec stream, where it and Rangely stream unite to empty their waters into Cuscutup Lake. The view from the foot of the rapids to Cuscutup Lake is very delightful, wild, romantic.

Cuscutup River for most of the way is very narrow and very crooked, more so than the Megalloway, which is so crooked that the water sometimes forgets which way to flow. The channel is shallow and narrow, and at points we had difficulty in getting through the narrow passes, which were choked with the dry float-wood. Along its banks, where sand bars make their way out into the stream, we saw multitudes of deer tracks, and in one instance those of a caribou. Ducks, too, are quite numerous in its waters, but it requires great care to get within shooting distance.

Having reached Indian Rock our journey is nearly over. Camp Kennebec is owned and run by an association of sportsmen who love to angle, and who believe—may their tribe increase!—in obedience to law of fish and game. They have a large building devoted to their comfort (now just finished), besides one for guides and other necessary out-buildings. The Superintendent, C. S. Richardson, remains here the entire year and looks to their affairs. He is a genial, good-natured soul, with proper gifts to fill the position to which he has been assigned. Of medium height, with beaming face and piercing eye and long gray whiskers and moustache, he looks a very Puritan. A Miles Standish is it were. He greets you with a hearty smile, and happily and cheerily you stay his quaint remarks furnish you an untold fund of pleasure.

Camp Kennebec is open to visitors during the season, except in June and September, when it is devoted to members of the club and their friends. The regular charge for board is \$1.50 per day, and less by the week, and they set the best table in the wilderness. The camp is situated on a sandy point, between the confluence of Kennebec and Rangely streams, and one of the finest fishing hereabouts is at this junction where the waters unite.

Leaving Indian Rock to complete the lake circuit we pass down the river on the little steamer *Ogussee* into Cuscutup Lake, thence into the Moosecumagantic, making our first stop at Soule's camp, about two miles from Indian Rock, a comfortable lodge looking out upon the lake, and whose doors are always open for a consideration to the sportsman.

Leaving Soule's the steamer makes its way across the lake, eleven miles, when it enters a narrow outlet a mile in length and finally brings up at Upper Dam, where a small hotel and a half dozen other buildings look out upon this narrow neck of water. The fishing at this dam is often very fine, and while we were stopping at the rock Marshall Whitney, guide and tyer of flies, of Upton, took three good trout, weighing respectively six and a half, five and a half, and three pounds.

A carry of one-fourth of a mile takes us to the head of Lake Molechunemunk, where the steamer *Welokenebacook* makes its connection with the upper lakes. Leaving Upper Dam the steamer passes down the lake above named through a narrow neck of water about a mile in length and into Lake Welokenebacook, or more often perhaps it is called Lake Richardson. From Upper Dam to Middle Dam is about ten miles.

I have now given the complete circuit, having started from and returned to Middle Dam; and I have little more to add, to conclude this sketch of the Rangely section.

Coming in *via* Andover we determined to go out *via* Farmington. From Indian Rock across the carry to Rangely Lake is one and three-fourths miles. Travelers walk and their luggage is carried across on a buckboard for \$1. The steamer runs on the Rangely every day, Sundays included, and leaves foot of the lake at 10 A.M. From this point to Rangely City is six miles, which the little steamer *Mollychunemunk* makes in about an hour, arriving about 11 o'clock. The stage from Rangely City, however, does not leave till 2 o'clock, thus giving ample time for dinner. There are two hotels here, the latter, the *Law House* and the *Greenvale*. The former is much the larger. Rangely has a population of about 500 inhabitants.

After touching at Rangely the steamer continues on to Greenville, at the head of the lake, three miles distant, and passengers can stop at either point for dinner. Greenville has only two or three houses. Rangely Lake is considered the handsomest of the lakes, but it does not afford the best fishing.

Leaving Rangely at 2 P.M., you soon find yourself upon a very hilly and somewhat steep road—now up, now down, but affording a very fine view of the surrounding country, which presents on either hand lofty mountains and deep valleys. Your progress is necessarily slow, especially as the horses upon this route are none of the best.

Four miles an hour is a fair average. The first stopping place after leaving Rangely City and Greenville is Beach Hill, or half-way house, where we changed horses, nine miles from Greenville and twelve from Rangely.

About 5 P.M. we renewed our journey, and about 7 P.M. we drove up to the Barden House at Phillips, Me., nine miles from Beach Hill and twenty-one from Rangely. A word for the Barden—it is first class. Phillips has a population of about 1,500, and supports two or three good hotels.

To reach Farmington in time for the train (8:45 A.M.) you must leave Phillips early; so at 4:30 we were called to breakfast, and at 5 A.M. we were smoking our pipes on the stage top just as the sun was putting in an appearance. About 7 A.M. we reached Strong, a small township, where we crossed Sandy River upon a suspension bridge, exchanged mails, and re-crossing, resumed our route over a rough and hilly road. At 8:30 we drove up to the depot, and the train drove out of the station. From Farmington to Portland is eighty-four miles, and the train arrives here at 12:57, giving thirteen minutes to connect with Boston and Maine or Eastern (or Boston). The train runs into the Eastern Depot at Portland, but if you wish to take the Boston and Maine you change at Boston and Maine transfer station.

For convenience of reference and for the scrap-book I give below a table of distances, time and fares from Boston to Parmeneche and return:

	Distance, Miles.	Time, H. M.	Fares.
Boston to Portland.....	308	4 40	1 20
Portland to Bryant's Pond.....	62	2 30	84 00
Bryant's Pond to Rumford.....	8	2 00	0 50
Rumford to Andover.....	12	3 00	2 00
Andover to Arm of Lake.....	4	0 45	0 75
Arm of Lake to Middle Dam.....	5	2 00	1 00
Middle Dam to Arm of Umbagog.....	10	2 00	1 00
Arm of Umbagog to Brown's Landing.....	2	0 30	0 25
Brown's Landing to Browns' Farm (hotel).....	5	0 50	1 00
Browns' Farm to Arisenoa Carry.....	1	1 00	for party
Arisenoa Carry to Fred. Flint's.....	23	0 60	Best.
Fred. Flint's to "Spoff's" Camp.....	3	0 15	Best.
"Spoff's" Camp to Farmington.....	14	1 00	Best.
Farmington to Danforth's Falls.....	11	0 40	Best.
Danforth's to Black Cat Brook.....	21	0 40	Best.
Black Cat Brook to Cuscutup Lake.....	8	2 30	Best.
End of Carry to Cuscutup Falls.....	9	2 30	Best.
Cuscutup Falls to Indian Rock.....	1	0 15	Foot.
Indian Rock to head of Megalloway Lake.....	4	1 00	Best.
Head of Cuscutup Lake to Indian Rock.....	4	1 00	Best.
Indian Rock to Soule's Camp.....	2	0 20	0 25
Soule's Camp to foot of Moosecumagantic.....	11	1 30	...
Foot of Moosecumagantic to Upper Dam.....	1	0 10	1 10
Upper Dam Carry to Mollychunemunk.....	10	0 30	Best.
Upper Dam to Middle Dam.....	10	1 30	1 00
Middle Dam to Rangely Lake.....	11	1 30	1 00
Rangely Lake to Rangely City.....	6	1 00	...
Rangely City to Greenville.....	3	0 30	1 10
Greenville to Beach Hill.....	9	2 00	2 00
Beach Hill to Phillips.....	9	2 30	1 00
Phillips to Farmington.....	20	3 30	1 00
Farmington to Portland.....	84	3 15	...
Portland to Boston.....	308	4 40	6 25

The following are the steamer connections:

Steamer connections on Mollychunemunk, or Lower Richardson—leaves Middle Dam for Upper Dam, 8 A.M.; leaves Upper Dam for Middle Dam, 10 A.M.; leaves Middle Dam for South Arm, 11 A.M.; leaves South Arm for Middle Dam, 12 to 1 P.M.; leaves Middle Dam for Upper Dam, 1 to 2 P.M.; leaves Upper Dam for Middle Dam, 4 P.M., connecting on each trip at Upper Dam with steamer for Indian Rock, etc.

On Moosecumagantic or Upper Richardson the steamer leaves Indian Rock for Upper Dam, 8 A.M., and Upper Dam for Indian Rock, 2 to 4 P.M., making only one trip daily, connecting with the steamer on lower lake.

On the Umbagog, Tuesdays, Thursdays and Saturdays the steamer leaves Upton for Middle Dam Carry about 8 A.M.; leaves Middle Dam Carry for Errol and Brown's Landing, 9 A.M.; leaves Brown's Landing for Upton, 12 to 1 P.M.

On Rangely Lake the steamer leaves Rangely Outlet for Greenville and Greenville for A.M.; leaves (return) for Greenville for Rangely Outlet at 2 P.M. One trip daily.

I have now, patient reader, finished the task which I set myself about, viz., to furnish information which no guide book contains, yet the want of which I experienced when contemplating this most delightful trip. By its aid you may, with patience, calculate the time required and expense necessary to make any trip you may desire to make. I would remark that a small party can easily make a two weeks trip from Boston for 300. You can add to this by extravagance and save upon it by camping out part of the time. If you attempt it, take the advice of the writer of an article which appeared in the *FOREST AND STREAM* a few weeks since—its author

cannot be questioned. Make up your mind to begin your enjoyment with the beginning of your trip. Make up your bargain in advance when you can, and if you know precisely where you wish to go, buy through tickets; you can easily deviate here and there and strike your circuit again. You will find a delightful country and plenty of trout, but it may not fall to your lot to capture the large ones. Take such as rise to your fly and rest content. An ordinary stock of little use, as a rule, for birds, without a dog. They are too tame to fly, and the chances are you will pass without seeing them. For deer, a rifle or gun with buckshot is what you need; at the proper season you can shoot all you ought to with either.

Finally, aim to be a true sportsman, keep your temper, don't bully your guides, and you will be happy and return a better man from your intercourse with nature.

GEO. A. FAY.

Natural History.

WINTER IN WYOMING.

COMO, WYOMING TER., Feb. 7th, 1890.

Editor Forest and Stream:—

I sent you a little while ago a list of some of the birds which have ventured to brave the severities of a Wyoming winter. Small as that list then was, it has become of late still smaller. For the past month I have looked in vain for a wing to darken the wintry sky. Even our solitary *Colinus ludovicianus excubitorides*, the common snipe, has left, and eagles and hawks have either kept at home or gone elsewhere. The weather has been more severe of late than in December.

We notice that on a day prelude to a storm, after a very mild one, birds are about, especially birds of prey, and for a good reason, for at the same time there seems a general premonitory stir among the other animals. Snow-white jack-rabbits begin to run about, as if seeking for a suitable shelter against the impending storm. Towards evening many of these run frolicking out into the open prairie, and sit on their haunches like specters; then not unfrequently an owl is seen hovering over their playground, while eagles and hawks have been watching them during the day. There is an uneasiness, too, among the herds of cattle, and in our mines we not unfrequently find the abundant footprints of those little marauders, the mountain rat (*Neotoma cinerea*), showing that they, too, have been on the stir during the night, looking for something to steal and amuse themselves with, during the time that they are to be snowed in. Snow-birds begin to appear in small flocks around the railroad station. The snow-bunting of late has been the commonest of these. The gray crowned finch (*Leucosticte tephrocotis*) has not called on us for some time. With the snow-buntings a few days ago, during very severe weather, I saw a shore lark (*Eremophila alpestris*), the first I have seen doing duty in this region as a snow-bird, though common enough during the summer months, when I have often found its nest in a slight depression at the roots of a tuft of grass, especially in Colorado, and later on have caught the fledglings. In South Park, Colorado, at an altitude of 10,000 feet, I have noticed them during the early fall, and thought I recognized some change in their plumage. This specimen was very lame, and was feeding with a couple of snow-buntings around the station at Como. It seemed as if its colors were brighter than usual, especially the yellow under the black cravat and the soft roseate hue on the back, like the last blush of a winter sunset on the prairie. Perhaps he was getting himself up with a view to Valentine's day, or possibly the colors may have seemed brighter by contrast with the snow.

One summer day in Colorado, myself and three companions were caught in a terrific thunder and hail storm on the open prairie. We took shelter in a broken-down claim shanty, and amid the roar of the thunder and a perfect bombardment of hailstones as large as marbles, a number of these little birds came in under the boards for shelter and nestled at our feet, fearing less the presence of man than the storm of frozen bullets outside. Mr. W. H. Reed, of Como, who is well known to the readers of this paper as a hunter and close original observer of nature, says that once during a heavy snow storm an *Eremophila* came into his tent and took shelter there for some days, feeding out of his hand and allowing itself to be freely handled. He also relates that one day on passing a bank of drift snow lying against some sage-brush he noticed some little holes in the snow, and on removing the bank he found a hundred or more of snow-birds of two species—the *Eremophila* and the *Junco hyemalis*, or Eastern snow-bird, and the common snow-bird—huddled together. The holes, he thinks, they had pecked in the snow for air-holes, and the whole party was passed, reminding one of the sheep in Colorado, which when overtaken in a snow drift are said to work down to the bottom of the feet on the ground till released. Of this batch, however, they caught fifty or more, and

Five and fifty snow-birds made a Christmas pie.

Such being the premonitory signals of a snow storm among the feathered and four-footed animals, it behooves man to take warning, gather in a pile of firewood, put an extra blanket on the bed, and bethink him how he is going to spend two or three days in which it will be next to impossible for him to stir out. In the night up-springs the northwester; the lanes fairly rocks; no amount of blankets seems to keep out the intense cold. In the morning he comes down stairs to find the windows opaque and garnished with strange delineations of ferns and foliage. He would fain warm the handle of his knife at the stove at breakfast, for it is like a clunk of ice. The clocks have all stopped during the night, and everything

that could freeze is frozen stiff. I once tried to paint in water colors with a wet-hot stove on my back, but the brush would throw nothing but ice on the paper. Thermometer is between 20 and 80 degrees below zero, and on Christmas Day, 35 to 38 degrees.

Outside a storm is raging; not merely the falling snow, but a dense cloud of driving drift—so dense that the station, only thirty yards distant, is barely visible. Owing to the tremendous and almost ceaseless gales the snow never lies more than a few inches deep on a level in Wyoming, but is often drifted into enormous banks. The trackmen, whom the storm rules of the Union Pacific Railroad oblige to, are the only ones to turn out, and they come back at dinner time veritable pictures of old Father Christmas, beards and moustaches one sheet of ice, and not unfrequently with frozen noses and ears which have to be brought to by a cold application of snow. Large herds of cattle fly before the storm, and many drop out by the way, and their frozen carcasses dot the prairie next day. At this season they are also, especially the long-horned Texans, particularly ferocious. Many an encounter has occurred this season between our men and them, in which the genus *Homo* has been glad to take to the rocks. The bulls do not always have it their own way, however, for one of them happening to meet a stout Irish the man armed with a sledge-hammer, in a railroad cutting, disputed the right of way and charged. The man struck him fair between the eyes, and "*Sternit huius bos*."

The storm generally lasts for two or three days, and is then as suddenly followed by soft, mild-weather. Then appear the tracks of all the fauna of Como on the snow. Rabbits have sallied out in the night to call on other rabbits and inquire how they have weathered it; hares have crept out from their thick sage brush to listen to the howl of the coyote, whose tracks are seen everywhere, and in some places a general scurry on the snow shows where some hare or rabbit has doubled on his pursuer. Then again curious little imprints at regular intervals, with a straight furrowed line between them, show where some mouse or gopher has made plunging leaps through the snow, so much out of its depth, dragging its tail after him. Below are the "footprints" of the night.

If the weather is fine a few hawks or eagles may rarely be seen against the sky. Such is a brief sketch of pretty tough winter weather in Wyoming. A. LAKES.

ABOUT THE BOHEMIAN WAXWING.

CLEVELAND, Ohio.

IN November of 1839 I first met with *Ampelis garrulus*. That beautiful, strange, wandering bird, of which so much has been said and so little known. I was in company at the time with the late Dr. Jared P. Kirtland, and as a student, was in search of some kind of a bird in order that he might teach me the art of taxidermy. We only met that afternoon with a flock of birds that we supposed at the time to be the common cherry bird (*Ampelis cedrorum*). By a lucky shot we secured a number for the evening's work, which was spent in skinning and mounting a pair of them, the Doctor remarking all the while that they were the largest and most extraordinary colored cherry birds he had ever seen; in fact before we got through our work he declared them to be the regular, genuine Bohemian waxwing, which up to this time had never before been taken in hand by an American naturalist. To be sure Dr. D. D. Baird, in his "Barns, Boreal America," mentions seeing a single male specimen at the Hudson Bay House in 1831, but was not able to procure it. From his observation Audubon added this species to the fauna of North America. Dr. Kirtland, after his discovery, was not slow to make it known to Audubon by letter. The returning mail brought an answer that the bird in question must be the common cherry bird, as the Doctor had seen a number of European birds, as mentioned by Richardson, was only a wanderer from the Old Continent. Doctor Kirtland then sent to Audubon a fine skin of this bird, but I do not know that the latter took further interest in the matter or even recognized in any way that the bird was common to the country.

Until within the last ten years the Bohemian waxwing has been a constant winter visitor here, arriving the last of November in close flocks of fifty to two hundred and more, remaining in certain localities where food abounded through the winter. A few stragglers have been often taken as late as the 1st of May. In December of 1841 I saw a flock of these birds on their way South that must have numbered many thousands by careful calculation. The flock was over two miles long by twenty rods in width. I procured several specimens from among them. The day following this flight was the commencement of the heaviest snow-storm that has visited this locality since. The great attraction for the waxwing here was the abundance of mountain ash berries; every lawn and front yard grew many of these trees; of late they have gone out of fashion, and the waxwings with them.

I have asked of the Park and Cemetery Commissioners to plant the mountain ash so as to call back this beautiful winter visitor.

The Bohemian waxwing does not breed in this region, but I am informed by Captain John Standard (the discoverer of Standard Rock, Lake Superior), that during four years' residence at De Tour, on the Sault St. Marie River, he has never missed seeing this bird in numbers during the entire summer months. He believes they nest in that locality, and as Captain John is a good naturalist and observer, I believe with him that they nest there.

DR. E. STERLING.

Our correspondent, J. K. Lum, who writes to us from Skookum Chuck (Oh ye gods!), Lewis County, Washington Territory, about *Ampelis garrulus*, says:—

Numbers of these beautiful birds have made their appearance here this winter for the first time in the history of the country.

YOUNG BIRDS IN WINTER.—In view of the unusual severity of the present winter in Europe, the following notes, contributed by Mr. Frank Norgate, of Sparham, to the London Field of January 31st, have a peculiar interest. The writer says:—

The following notes, if they do not record any very unusual dates for young animals, seem to me particularly

interesting in such a severe winter as we are having. Had the season been unusually mild, the occurrence of young birds probably would have been noticed as one of the signs or consequences of such mild weather. I need not give the readings of the thermometer for more than one day, but the winter here is the severest one I ever experienced. In the first week of last November I found a young slowworm (about 5 in. long) on the road in Sparham. On the 14th of the same month I dug up three living maggots of *Melolontha vulgaris*. Is it the custom of this species to hibernates in the perfect state? Nov. 16, I heard the snoring noise as of young barn owls in the roof of Sparham church. Do adult barn owls make this snoring or hissing noise also, or is their cry confined to the cackling sound which I believe is peculiar to old barn owls? Nov. 20, At Holt I saw two young barn owls (downy nestlings) unable to fly. They were dead, but fresh enough for stuffing, and Mr. Duck told me he had two similar ones brought in the previous week. Nov. 26, In Sparham I shot two young wood pigeons with long filaments of down still adhering to the upper wing coverts and secondaries. Dec. 2, Thermometer registered half a degree below zero. Dec. 4, I bagged two more very young pigeons. The next day I shot one more pigeon with downy nestling filaments on its wings. On the 11th of the same month the two levers, the size of rabbits, were seen in Sparham. Dec. 17, I saw a faint hissing noise as of still younger barn owls, as well as the older ones, in the same part of the church roof. The next day I shot a very young ring dove, Jan. 7, 1890. We found a dead nestling barn owl in the nest in the church roof. There were probably more alive, but a great part of the nest was inaccessible, and we only saw the dead one, which was rather "high," but fresh enough to have been alive, I am confident.

On the 18th of the same month I heard a faint hissing noise as of still younger barn owls, as well as the older ones, in the same part of the church roof. The next day I shot a very young ring dove, Jan. 7, 1890. We found a dead nestling barn owl in the nest in the church roof. There were probably more alive, but a great part of the nest was inaccessible, and we only saw the dead one, which was rather "high," but fresh enough to have been alive, I am confident. On the 18th of the same month I heard a faint hissing noise as of still younger barn owls, as well as the older ones, in the same part of the church roof. The next day I shot a very young ring dove, Jan. 7, 1890. We found a dead nestling barn owl in the nest in the church roof. There were probably more alive, but a great part of the nest was inaccessible, and we only saw the dead one, which was rather "high," but fresh enough to have been alive, I am confident. On the 18th of the same month I heard a faint hissing noise as of still younger barn owls, as well as the older ones, in the same part of the church roof. The next day I shot a very young ring dove, Jan. 7, 1890. We found a dead nestling barn owl in the nest in the church roof. There were probably more alive, but a great part of the nest was inaccessible, and we only saw the dead one, which was rather "high," but fresh enough to have been alive, I am confident. There were probably more alive, but a great part of the nest was inaccessible, and we only saw the dead one, which was rather "high," but fresh enough to have been alive, I am confident.

UNIFORM NOMENCLATURE.—We publish below the scheme presented by the Committee on Nomenclature before the late Convention of the Michigan Sportsmen's Association, at Bay City, and which, with the exception of the substitution of the name "quail" for the name "colin," was adopted by the Association. The views expressed by the Committee are founded on the right idea, that of absolutely local names, and substituting the names which belong to the various species, and by which they are known to biologists, the men who may fairly be supposed to know more about the animals than other people do, because they have made the animals their special study. So far as the English names go, what the Committee says is very well, but they have tried to do too much. It is very doubtful whether the masses of the people can ever be educated to the point of calling even our common game animals by their scientific names; and, if they can be brought to this point, it will be just as easy for them to learn the proper names as wrong ones. The various genera into which the grouse, for example, have been divided, are generally accepted by ornithologists and should be employed; and the same is true of the deer. If we are going to try to teach people, let us teach them what is right in the first place, and thus save double labor:—

DEER GENUS.—Elk, *Cervus alces*, commonly called moose. This animal is identical with the elk of the old world, and should be called by its native name, the American name, moose, is not a misnomer.

Wapiti, *Cervus canadensis*. Improperly called elk and grey moose. This is an American form, probably having no representative in any other part of the world. The name elk should never be applied to him, as it belongs to another species.

Deer, *Cervus virginianus*. Also called Virginia deer, red deer, and American red deer.

Caribou, *Cervus tarandus*. Also called woodland caribou, woodland reindeer and reindeer.

GROUSE GENUS.—Grouse, or pin-tailed grouse, *Tetrao capidus*. Also called prairie chicken and prairie hen.

Ruffed grouse, *Tetrao umbellus*. Improperly called partridge and pheasant. As this fine bird is neither a partridge nor a pheasant, but a grouse, he should be respected by the name of his own name.

Spruce grouse, *Tetrao canadensis*. Synonyms: Canada grouse, spotted grouse, black grouse, and Canada partridge and spruce partridge. As it is not a partridge, of course these last two names will not be applied to this bird by any intelligent person.

Sharp-tailed grouse, *Tetrao pediceetes*. Sometimes called prairie hen or chicken, or sharp-tailed partridge.

COLIN GENUS.—Colin, or Virginia colin, *Ortyx virginianus*. Synonyms: Quail, partridge, Virginia quail, Virginia partridge, Maryland quail, or partridge, and Bob White.

These synonyms are all inappropriate, or belong to other birds, except the last, and should not be applied to this excellent and useful species of game. Bob White is not inappropriate, and has been used considerably of late by some enthusiastic name-makers, but we like the name colin, but it is euphuistic, easily spoken and written, and has the merit of age and the claim of priority. Webster defines colin, the American partridge, *Pendix virginianus* or *Ortyx virginianus*, and gives Baird as authority. "Chamber's Encyclopedia" says, "Colin—see Virginia quail." On turning to that page, we find Virginia quail,

or calm (*Ortyx*), a genus of birds of the family *Tetraonidae*, closely allied to the quails and partridges, but differing from both. * * * The best known species is the Virginia colin (*O. virginianus*), etc. Why this old and appropriate name has been dropped is an enigma, but the propriety of reviving its use is clear.

Crows.—*Washington, D. C., Feb. 21st.*—I read with much interest the article on "Ravens and Crows," by Mr. Buckley, in *FOREST AND STREAM* of this week, as I do all your articles on subjects of natural history, and was reminded of some traits of *Corvus americanus* in this section of the country. Vast numbers of crows may be seen morning and evening flying over Washington, on their journey to and from Chesapeake Bay and the pines of Virginia, where they roost. Dead fish, defunct quadrupeds and a thousand and one detectable reminiscences of Baltimore sewers, cast up from the deep, are the attractions. While I wanted particularly to mention, however, is the fact that in the early spring these ugly birds have a bad habit of finding unprotected lambs on the loosely managed farms in Maryland and Virginia, and pecking the eyes out of them. In this matter the crows are great epicures. An experienced oculist could hardly remove an eye with more ease and facility than these merciless crows. They are also death on young chickens, and are as busy as hawks on the prairies in finding and destroying new broods. In some of the pinceries large quantities of guano are obtained and used in fertilizing the thin soil of these States, which is about all the benefit the crows are, and that is small recompense for the damage they inflict.

J. C. B.

OTTERS UNDER THE ICE.—*Houlton, Me., Feb. 14th.*—My experience coincides with that of "Fred," as stated in the last issue of *FOREST AND STREAM*, and I will add further, that it takes a smart hunter to run down one of these animals swimming under the ice. Otter, mink, and muskrats are taken by spearing through the first-formed ice when clear and thin, just strong enough to hold a man while in rapid motion. The hunter strikes them as they rise to breathe. The breath is oxygenized by contact with the water almost as soon as expelled, but when hard pressed more or less is wasted and the quarry soon weakens for want of it. JACK.

WHAT MARTIN LUTHER THOUGHT OF THE SPARROW.—*Chicago, Ill.*—A large tree in front of my library windows is the perch nearly all day of innumerable sparrows, to my cheerful entertainment, and an alley at the side of my house is their principal feeding ground, where I observe their food is grain.

Yet I remember picking up some five or six months ago, a helpless callow bird, unmistakably sparrow, with a fresh angle wound in its bill. Is it yet settled what is their chief food? and has the sparrow war ceased, or only subsided for a time?

Among the miscellanies of Luther's "Table Talk" (Bohn's edition, page 368), are the following lines, which I cite for the benefit of Mr. Coues, to show the opinion that Luther had of them three and a half centuries ago:—"The sparrow is a most common animal and does great harm to the crops. The Hebrews call it *tschirp*. It should be destroyed whenever found." T. D. L.

Fish Culture.

FISH CULTURE IN MASSACHUSETTS.

THE Massachusetts Commissioners are from year to year perfecting the system of fishways in the various rivers of the State, and in this way providing free passage for the fish to and from their spawning grounds. The large fishway built at East Taunton, over what is known as Squaw Ditch Dam, has given general satisfaction, and the conflict which has existed for half a century between the mill-owners and the fishermen has finally been settled, or at least transferred to other battle-fields. The inspection of the passage of fishes up the Lawrence fishway was continued through the year from May 5th to Nov. 1st, and a record kept of two observations daily. The number of salmon thus noted was twenty-eight; the other fish being alewives, suckers, chubs, bass, shad and eels.

Serious depredations were committed at the South Hadley fishway. Thousands of fish were taken from it, and the services of a Superintendent were found necessary here to protect the State's interests. The efforts to obtain shad spawn here were rendered futile by the exorbitant prices insisted upon by the owners of the seining ponds there, and the Commissioners of both Massachusetts and Connecticut felt warranted in resisting their demands, even with the loss of the spawn. It is suggested that another pond might be provided lower down the stream, where the Commissioners would be independent of the private establishments.

The breeding of trout, though not strictly within the province of the Commissioners' work, has been prosecuted to utilize the breeders acquired by the State in the lease of the hatching ponds at Plymouth, N. H.; over 100,000 spawn have been produced, of which one-fourth belong to Massachusetts, and it is proposed to distribute these to parties who will keep a record and furnish statistics regarding them. They will be ready for delivery in April.

Massachusetts received as her share of the land-locked salmon (*Salmo sebago*) from the works at Grand Lake Stream, Maine—340,000 eggs—of which 224,763 were successfully hatched and distributed to some twenty-eight ponds throughout the State.

The returns from most of those who received these fish are sufficiently encouraging to warrant a further distribution of them. All parties must make application in writing, giving a careful description of the pond in which they desire to place them. The plan is to furnish them at the State hatching-house in Winchester, free of charge, to all applicants having under their control any of the

great ponds of the State. For transportation, parties should bring with them good clean half-barrels or milkcans, holding ten or twelve gallons, a thermometer, and a dipper for aerating the water. The half-barrel will carry from 4,000 to 5,000 of the milkcans about 3,000. The introduction of these fish into ponds having neither inlet nor outlet will for the present be discontinued. There will probably be about 200,000 for distribution next spring. No orders will be received after the 20th of April.

None of the spawn of the California salmon, although freely offered by the United States Commissioners to the States, has been accepted by any of the New England Commissioners this year.

There seems to have been a general feeling, without preconceived action, that it was best not to incur any further expense in trying to introduce them in our waters until something more was known about them. The oft-repeated assertion that these fish all die after spawning has been pretty thoroughly exploded. But although rapid in their growth, and apparently very healthy, they have, from some unknown cause, failed to report themselves. Of the hundreds of thousands that have been put into our rivers, not one adult fish has been seen or taken, and so far as we know, not a single smolt has been caught in any of our streams. It is to be hoped that the cause of this apparent failure will be discovered, and that the energetic and praiseworthy efforts of the United States Commissioner to introduce them into Eastern waters will yet be successful.

There was an increased run of salmon in the Merrimack the past season over that of the preceding one. They came in schools during the month of June; but very few made their appearance after that month. During the greater part of June there was scarcely a day that they were not seen either in the fishway or around the mouth of it.

An unusually noticeable fact was that some of the fish were unusually large for the river; one which passed the weir at Plymouth during a heavy rise of water was killed in attempting to scale Livermore Falls. It weighed over 23 pounds. Doubtless it was of the first year's plant.

The season has been an unfortunate one for securing these fish for breeding purposes. Either the water would be so high that the nets could not be maintained, or so low that the salmon were deterred from making any effort to reach the spawning-grounds. A few heavy rains in the mountains will raise the river at Plymouth very rapidly from four to six feet. During the low stage of water many salmon could be seen in deep pools below Plymouth. At New Hampton, late in the season, no less than eight large ones were seen in one pool. The drought has been severe this fall, and it is probable that many salmon have spawned in the rapids below Livermore Falls, instead of going above, as they otherwise would have done.

The exact number of young salmon deposited alive in the river in 1875 is not known. They were entrusted to the care of Mr. Wadleigh, then Commissioner of New Hampshire, whose inexperience caused considerable loss; and in one instance the fish were disposed of in a direction not contemplated by the Commissioners of this State. These things have had their effect in lessening the number of adult fish taken at the hatching-house. The plantings of 1876, under the care of John McNeil, was by far the largest and probably the most successful effort that has been made in any one year toward re-stocking the river. The result of this planting will be due the coming season.

A good many salmon have been taken along the coast in pounds, weirs, and gill-nets. One man near Newburyport took twelve, and many were taken near New Bedford, and sold in that market. Yet of all the statements received from the fishermen giving the number of edible fish taken by them, only two report any salmon.

There were many pairs and smolts found in the Pemigewasset the past summer, which must have come from spawn naturally deposited by the salmon that reached the head waters during the last two years.

Below will be found extracts from the report of Mr. A. H. Powers, Commissioner of New Hampshire, and superintendent of the hatching-house, in the joint interest of the two States:—

"The 367,500 California salmon mentioned in my report one year ago were distributed in the month of January as follows: 25,000 were put in the Contoocook River, 25,000 in the Salmon Falls River, and the remainder in the Pemigewasset. At any time till the last of August these salmon (parrs) could be seen in large numbers anywhere in the river near the hatching-house, from three to five inch long, and of a fine, apparently healthy, color."

"From our breeding from 160,000 eggs have been taken. Twenty-two Atlantic salmon have been taken this season, weighing from eight to twenty pounds each. The first was caught June 13th, and the last Oct. 29th. All were caught at night, or before 6.30 A. M. Thirteen were females, and from them we have secured over 100,000 eggs. For over thirty years not a salmon passed up the Pemigewasset. This is the first time, in this country at least, that any considerable quantity of eggs has been taken from mature salmon caught from a depleted river artificially re-stocked. The result cannot fail to be highly gratifying to those who have, or have had, the matter in charge, and has, to a certainty, demonstrated that the faith of the few, who argued that the rivers could be re-stocked to advantage, was well founded. Those who have believed it impossible must now be convinced that it is not only possible, but quite practicable."

That the California salmon, put into this river in 1875, survived the winter and summer up to the last of August, making a much more rapid growth than the Atlantic salmon, is certain; but whether they will be found next summer as smolts, or whether their sudden departure last summer was final, remains to be seen. Of the large number that have been turned into the Merrimack during the last five years, this is the only instance in which any trace of them has been detected so late in the season.

The Bucksport establishment for taking Penobscot salmon spawn was reopened this season, and the money heretofore used to pay for the transportation and expenses of California salmon was used to secure spawn from this place.

The 100,000 eggs taken at Plymouth, with what may be obtained from Bucksport, together with the natural deposit in the river, will make a fair planting for the coming season.

The State of New Hampshire has passed a law extending the time for taking salmon to 1892, in order to carry out what has been so successfully begun; a similar law should be passed by Massachusetts.

"SETH PERKINS'" HYSTRIES.—*Elk Lick, Somerset Co., Pa., Feb. 16th.*—*Editor Forest and Stream.*—Mr. Seth Perkins, in the last issue, says he has crossed the catfish with the "muscle." Will he please give us the details? He is respectfully requested to stand up in meeting and tell what he knows about the matter. H. M.

The number of *animulae* in a single drop of water is past finding out, but it has been estimated by careful students that this host of living creatures is doubled and trebled when the drop of water is dyed with pigment and flows from the tip of an ordinary Gilt pen. Let our correspondent first read and comprehend the facts detailed in the paper published elsewhere with the title "New Discoveries in Natural History." Then he may be prepared for the next step in the mysteries of ink-bottle fish culture.

WHITE FISH FOR LAKE ONTARIO.—*Rochester, Feb. 12th.*—I think there will be an effort made to stock Lake Ontario with white fish, and many parties knowing where the fish are taken in large numbers during their spawning season, will confer a favor by letting me know by letter.

SETH GREEN.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

GAME AND FISH DIRECTORY.

In sending reports for the *FOREST AND STREAM* Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access. Hotel and other accommodations; Game and the Season; Fish and Season; Boats, Guides, etc.; Name of person to address.

DR. ROLLIN'S TEST.—The dimensions of the segments of the tent described in our issue of Feb. 12th, are: 10 centimeters wide at top; 94 centimeters wide at bottom and 240 centimeters in length.

CONNECTICUT.—A land-locked salmon weighing four pounds has been taken from Simpson pond, Rockville, this winter.

MICHIGAN.—*Alpena, Feb. 2d.*—Long Lake is six miles from Alpena, which is situated on the border of Lake Huron. Reached by daily boats in summer from Bay City, four boats per week from Detroit. Long Lake is a beautiful sheet of water nine miles long by one and one-half miles wide; plenty of black bass, perch and pike and partridges. Over 1,500 deer killed in this county last season; good accommodation at Long Lake House; charges reasonable.

FIVE BLACK BASS FISHING.—*Oswego, N. Y., Feb. 21st.*—As the February sun casts bolder and yet bolder glances over our shoulders; as he climbs the southern heavens, and the springtime crow begins to examine the half-naked fields with critical eye and noisy cawing, the fisherman's blood gurgles in his veins with freshened vigor, and rods, lines and reel are taken from the shelf and overhauled with a business-like air which discounts the weeks that yet intervene between the mud and slush of to-day and the rustling leaves and purring ripples of June, and while the time yet serves and a decision is still to be made as to "where shall we go this year," let me call the attention of my brethren of rod and reel to what this location can offer.

We have here a summer city delightful beyond comparison, a temperature of from 75 to 78 deg. F.; the grand Ontario before it, the blue Chouaguen in its midst, and as charming a country upon either hand as the Indians ever gazed upon. From our breakwater and piers in season we take pike, ciscoes, bass and shad, all with the fly, and all to be caught within thirty minutes' walk of any of our hotels. Our river, now civilized under the name of the Oswego, swarms with black bass, pike and shad, and for several miles above the city it is wide and shallow, with numerous riffles and falls, rendering it a paradise for the fly-caster.

Within a dozen miles we number as many good trout brooks and ponds, and from this point one may with equal ease go down the St. Lawrence, up to the Falls, or into the Adirondacks. Our air is clear and bracing, our nights cool, our scenery beautiful, our citizens friendly and hospitable. Fine accommodations may be had at any of our hotels at reasonable rates, and the expenses of the fisherman in his journeyings, either upon lake, river, or into the country, are ridiculously small. A boat with oarsman can be had at any time for twenty-five cents per hour or two dollars per day, and board and camping, the opportunities for which are many, will not exceed one dollar a day.

From New York, Oswego may be reached by the O. & W. R. R., the N. Y. C. and D. L. and W. via Rome or Syracuse; from the west by the N. Y. C., the S. C. and the L. O. S.; from the east by the R. W. & O., and by water from Ogdensburg, Charlotte or any of the upper lake ports, by a daily line of propellers. The expense from New York is seven dollars, and proportionate rates from other points.

We raise the finest strawberries in the month of July of any State in the Union, and our black bass are (we the most gamy. With a welcome for all I remain,

J. E. HAMILTON.

Class 14.—**Campion Pointers**, over 55 lbs.—**dogs**, \$35;
Class 15.—**Over 50 lbs.—bitches**, \$35. Class 16.—**Under 50 lbs.—**
ers, over 55 lbs.—**dogs**, \$30 and \$20. Class 17.—**Over 50**
lbs.—bitches, \$30 and \$20. Class 18.—**Campion Pointers**,

pies,—**dogs**, \$10; **silver medal**. Class 31.—**Bitches**, \$10;
silver medal.

In Classes 32 to 37 inclusive, a white spot or frill will be allowed; but a black, white and tan dog must go in the English Setter Class.

Class 32.—Champion Black and Tan Setters—dogs, \$35; Class 33.—Bitches, \$35. Class 34.—Black and Tan Setters—dogs, \$30 and \$20. Class 35.—Bitches, \$30 and \$20. Class 36.—Puppies—dogs, \$10; medal. Class 37.—Bitches, \$10; silver medal. Class 38.—Champion Red Irish Setters—dogs, \$35. Class 39.—Bitches, \$35. Class 40.—Red Irish Setters—dogs, \$30 and \$20. Class 41.—Bitches, \$30 and \$20. Class 42.—Puppies—dogs, \$10; silver medal. Class 43.—Puppies—bitches, \$10; silver medal.

Class 44.—Irish Water Spaniels—dogs or bitches, \$15; silver medal. Class 45.—Clumber Spaniels—dogs or bitches, \$10; silver medal. Class 46.—Cocker or Field Spaniels—dogs, \$15 and \$10. Class 47.—Bitches, \$15 and \$10. Class 48.—Puppies—dogs or bitches, silver medal.

Class 49.—Fox-hounds—dog or bitch, \$15 and \$10. Class 50.—Bengals—dog or bitch, \$15 and \$10. Class 51.—Dachshund—dog or bitch, \$15; silver medal. Class 52.—Fox Terriers—dogs, \$15 and \$10. Class 53.—Bitches, \$15 and \$10. Class 54.—Puppies—dogs, silver medal. Class 55.—Bitches, silver medal. Class 56.—Collies—dog or bitch, \$20 and \$10. Class 57.—Puppies—dog or bitch, silver medal. Class 58.—Bulldogs—dog or bitch, \$15 and \$10. Class 59.—Bull Terriers—dog or bitch, \$15 and \$10. Class 60.—Puppies—dog or bitch, silver medal. Class 61.—Slate Terriers—dog or bitch, \$15 and \$10. Class 62.—Pugs—dogs, \$15 and \$10. Class 63.—Bitches, \$15 and \$10. Class 64.—Puppies—dog or bitch, silver medal. Class 65.—Scottish Terriers—dog or bitch, \$10; silver medal. Class 66.—Black and Tan Terriers, over 5 lbs.—dog or bitch, \$15; silver medal. Class 67.—Dandy Minnott Terriers—dog or bitch, \$15; silver medal. Class 68.—Yorkshire Terriers, blue and tan, over 5 lbs.—dog or bitch, \$15 and \$10. Class 69.—Same, not exceeding 5 lbs., \$15 and \$10. Class 70.—Toy Terriers, other than Yorkshire—dog or bitch, \$15; silver medal. Class 71.—King Charles or Blenheim Spaniels—dog or bitch, \$10; silver medal. Class 72.—Japanese Spaniels—dog or bitch, \$10; silver medal. Class 73.—Italian Greyhounds—dog or bitch, \$10; silver medal. Class 74.—Miscellaneous or Foreign Class—dogs or bitches not included in above classification, \$20, \$15, \$10; two silver medals.

The entries closed April 12th. Catalogue of classification and prizes, with rules and regulations and entry blanks, may be obtained of the Superintendent, Mr. Charles Lincoln, whose office is at 111 Fulton street, N. Y., over Morgan's Restaurant.

The number of entries already received is largely in excess of any of the entries formerly received at such an early date; and this, with other indications, leads the management to anticipate a very large show.

Mr. M. P. McKoon's COCKER SPANIELS.—In a late number we made brief mention of the excellence of Mr. McKoon's stock, and at the same time noticed that we had received for our album, ten card photographs of his little cockers, taken by Mr. John T. Walters, a neighbor of the proprietor of the Blue Star Kennels. The reputation of Mr. McKoon's fine collection of handsome and healthy dogs is so well established in this country that further remark as to their beauty is unnecessary, but before noticing the distinguishing features of cockers, we wish to call attention to the fact that experience has shown Mr. McKoon's dogs to be superb workers, as in almost every case they have turned out well. It is an astonishing thing that cockers are not more generally used in this country, particularly in sections where the underbrush is so dense and intertwined that full-sized setters or pointers cannot force their way. Take Montauk, for instance, where woodcock at times are plenty in the scrub-brush thickets that help to fill up the hollows between the hills. One little cocker would move more birds than a dozen setters and all King Pharoah's descendants put together. Unlike the pointer or setter, the spaniel always works with his nose to the ground, and does not carry his head in the air feeling for a booby scent. Thus, this peculiarity places him at an advantage over other keen-scented dog in covers where the air has but little chance to circulate. Experienced trainers tell us that kindness is quite out of the pale of possibility in breaking the spaniel, and that nothing will do but severity; we do not agree to this. Let the puppy be eight months old, handled with a twenty-yard cord, and then introduced among three or four broken dogs, and the task of breaking is a comparatively easy one. When he has been taught to work at a proper distance—far with spaniels distance is to be inculcated first and principally—then turn to teaching him to "down charge," and work and time will do the rest. It was Herbert who first called the attention of the sporting public to the invaluable qualities possessed by this sprightly, jolly little field companion, whose merry laugh would drive the top woodcock from his morning lodge. The breaks and thickets surrounding Merritt's Island forced the thoughts of the newly-ledged Englishman back to the covers of the British coast and the woodcock's haunts in the Norwegian inland woods and marshes. He saw at once the advantage of the cocker for woodcock shooting in this country. And as far as his theory went Herbert was "a dead to rights."

GEORGIA FOX-HOUNDS.—*Americus, Ga., Feb. 15th.*—The breed of fox-hounds mentioned by "J.A.G." in issue of Jan. 29th, is a favorite with us—sensible, fast, reliable and splendid bottom. One thing about them rather peculiar is, the ring never goes entirely around the neck, the original stock came from Maryland. The peculiarity of shedding the hair in summer seems to be common to the dogs, but it makes them liable to mange, unless well cared for.

We run both fox and wild cats with our dogs, but this breed of dogs is not so good for cat as for fox, because they circle too far.

IN-BREEDING.—*Winchester, Mass., Feb. 18th.*—You say breeding a bitch to her sire would be injurious. Is not this a mooted question? I have a flock of partridge Cockerhens, which I have bred in-and-in for six or seven years—it would be hard to beat them. The famous short-horn cattle were obtained by breeding in-and-in, and has not every strain of animals been established in the same way? I know very well what is said and the theories that are put forth in regard to it, but practically every successful breeder owes his success to breeding in-and-in.

The leading physiologists and scientists of to-day are very unanimous in opinion that in-breeding in the human race, even within bounds permitted by law, is not conducive to either physical, mental, or moral development, but decidedly the reverse. In proportion as we descend in the scale, the ill results are less pronounced, or manifest; chiefly because the various developments of the animal are less pronounced, but the evil still remains; and where in-breeding is recklessly indulged in, soon becomes manifest and very serious. We do not declaim against all in-breeding, but where it can be avoided and still secure the prominent or desirable features of type which we desire to reproduce or develop, it should be done. Thus in-breeding, *per se*, is an evil, and has been marked by the disapproval of all ages, deteriorating diseases and sterility being the most prominent evil results in the human race.

IMPORTED PUPPIES FOR THE MONTVIEW KENNEL.—In the FOREST AND STREAM of Feb. 12th, we noticed the arrival of a fine brace of Laverack puppies; we are now enabled through the courtesy of Mr. Jos. H. Dew, of Columbia, Tenn., to give the particulars. The puppies, Blue Queen and Blue Princess, were purchased through Mr. George Lowe, Secretary, E. K. C., of Mr. H. F. Grant, of Newport, England, their breeder. They are by Mr. Lowe's son, O'Shanter, who is by champion Rock out of champion Runt; and out of Mr. Grant's bitch La Reine, who is by Blue Prince out of *Corra*. These puppies are as pure Laverack as can be found anywhere, and combine fine crosses to old Blue Dash. La Reine is own sister to the field trial winner, Blue Bell III. The brace reached Columbia in fair condition after their long rough trip by both water and land.

WESTMINSTER KENNEL CLUB'S NEW KENNEL.—We are informed by Mr. Robt. C. Cornish, Secretary, and Treas. of W. K. C., that the club has just taken a lease of sixty acres of the old Litchfield Farm at Babylon, L. I. Possession will be taken by the club as soon as the house and kennels are put in order, which will be in about two weeks.

ST. LOUIS BENCH SHOW.—The St. Louis Kennel Club's Bench Show will be held Oct. 5th, 6th, 7th and 8th.

BRED.—*Countess Bear-Count Rocket.*—The Montview Kennel's Countess Bear to Count Rocket.

Daisy Dean-Count Fred.—The Montview Kennel's Daisy Dean to Count Fred.

Blaze-Lincoln.—The Montview Kennel's Blaze to Lincoln.

Daisy II-Sensation.—The Westminster Kennel Club's Daisy II to Sensation, Jan. 23rd.

Pallas-Sensation.—The Westminster Kennel Club's imported Pallas to Sensation, Jan. 24th.

Placie-Gray.—Mr. Robert C. Cornell's fox terrier bitch Pixie to Mr. Howard Mitchell's Gray.

Venus-Victor.—Messrs. B. Skiles' beagle-bitch Venus to Messrs. Pennell and Elmore's Victor, Christians, Lancaster Co., Pa., Feb. 6th.

Psyche-Rush.—Mr. H. N. Munn's Psyche to Mr. Edmund Orgill's Rush.

Flirt-Glen.—Mr. E. Francois' (Newark, N. J.) black and tan setter bitch Flirt-Munn's Dink out of Field's Aloe. Litter sister to Mollen's Belle and Pryor's Belle—to Dr. Aten's Glen, Jan. 29th.

Ruby.—Mr. Edmund Orgill has sold his pointer bitch Ruby to Mr. A. H. Moore, of Philadelphia.

Countess Royal-Faust.—Mr. S. B. Dilley's Countess Royal to St. Louis Kennel Club's Faust.

Spot-Bow.—Mr. James Brittain's Spot to St. Louis Kennel Club's Champion Bow.

SALES.—*Count Fred and Dashing Model.*—The Montview Kennel, Columbia, Tenn., sold last week, Count Fred and Dashing Model to Mr. A. H. Moore, of Philadelphia. These dogs were imported in 1870.

Viceroy.—Mr. W. W. Smith, Raleigh, North Carolina, has purchased from Mr. Henry W. Livingston, of this city, the lemon and white pointer dog pup Viceroy, whelped November 24th, 1879, by Orgill's champion Rush (Flake-Lille), out of Livingston's Rose (Snaphot-Gypsy).

The notice of sale of Berkeley and Duck to Mr. Moore, of Philadelphia, in our last issue, was erroneously printed Berkeley and Duke.

Kestrel.—The St. Louis Kennel Club's imported pointer-bitch Kestrel has whelped one dog and three bitches to Mr. Pilkington's Gamet.

STATE CONSTABLES.—Commenting upon the inefficiency of the "duck police" of that neighborhood, appointed by local political influence, the *Haare Republicain*, of Havre de Grace, Md., makes a point for the system of having game constables appointed by the Governor. We are pleased to see such an intelligent opinion expressed.

One of the radical defects of the law is the appointment of the duck police by our county commissioners. A bill is about to be presented to the Legislature placing their appointment in the hands of the Governor. The position of duck police is now made a political appointment, and as such is a subject for bargaining and trade. Place the appointing power in the hands of the Governor, and let the gunners unite in recommending gentlemen who they are satisfied will faithfully carry out the law in all its provisions, and the result will be more satisfactory.

Woman's Column.

LETTERS FROM MICHIGAN AND CONNECTICUT.

BAY CITY, MICH., February, 1880.

Editor Forest and Stream.

The pleasantly written letter from my friend J. M., which appeared in this column not long since, attracted my attention and recalls many pleasant associations, chief among which was six weeks spent together in Northern Michigan, accompanied, of course, by one of the sternest sex, Mr. M., a Nimrod and an angler of good prowess. The scene of our chief delight was the Jordan and Boyne Rivers, whose cool, bright waters flow into Pine Lake, and from thence, at Charlevoix, into Lake Michigan. The banks of the Jordan, luxuriant with vine, fern and moss, and overhung with cedar, whose dark green is here and there relieved by the lighter shade of tamarack with an occasional beach and maple, together with the sweet wild perfume and deep solitude, broken only by the merry ripple of the swiftly-flowing water, and the music of the whispering pines, furnishes a retreat infinitely in primal beauty the classic shades of more frequented streams and twice-told here. This too, is the fit home of the much-sought mountain trout. A jutting moss-grown log, round which the eddying water whirls, and the spreading cedar shades, may be the friendly protection of several lively individuals, too wary for the temptation of brown hackel or green dragon.

Arriving at this cool seclusion, our heretofore vigilant companion declared he would not be bothered by women, and procuring us the services of a trusty guide, left us to follow our own devices. Often

"With gun and rod he'd leave us,
Pursuant of his sport."

Nor would we see him again until the hour of noon brought him to the trysting cedar tree, where a lunch would be spread, followed by a siesta enlivened by a pillow of fragrant moss, and a cool breeze which never failed, and lulled by the weird song of the water-thrush.

Mrs. M.—being much inclined to rival her husband in the use of the rod, and skill in throwing a three-weight leader, and I quite approving such an ambition, much of our time was spent in fruitless attempts at scientific wrist movements; and it was with praise-worthy patience and skill that our good guide, who changed from tamarack to cedar, and from cedar to spruce, on three-ply leaders. But do not imagine that so much patience could be without its reward, for besides many lesser beauties that graced our boat-well, was a two-pound attraction, so shy and active that it required all Mr. M.'s skill and the assistance of a landing-net to induce him to change his quarters.

While pursuing these rod exploits upon the river we made our headquarters at Mr. Webster's, whose domicile was the only house for many miles around. And better comfort could not be found. The house is built of squared timber, piled up in block fashion, reminding one of the legends of their grandfather's time. The upper story was one large comfortable room, capable of becoming as many as there were blankets to hang from the beams above, thus making a wall at once silent and useful in the way of a pillow, and so forth. And this recalls an incident. Coming in late one afternoon, I and I were in time to witness the arrival of a lady and gentleman from Chicago. And standing in the background, thinking dubiously of our short gingham gowns and thick boots, beside this exquisite lady, we heard her inquire loftily of Mrs. Webster to be shown furniture in a little room, where she had assured the lady into, but politely asked her to leave, and assured the lady into, a nice little room, whose gray partitions were gently undulating in the summer air. They did not stay long.

Again we were gliding swiftly and silently down the river, in the soft light of the setting sun. A shadow, then a duck, in quick succession came flitting up the stream. A gentleman in the boat behind us arose, expecting to bag the game, after giving the lady a first chance. A report from the lady's 10-gauge shot gun, followed by a splash and a headlong race, was the result. It was a triumphant moment for her, being among the first of her wing shots.

After four weeks of this delightful sport we betook ourselves to sailing. Our craft, which was too large for the river, we had left at its mouth. Embarking with sufficient provisions we cruised along the breezy expanse of Pine Lake, tending over night beside a pair of herons. It was our purpose to reach by slow degrees the head of the lake where supplies the Boyne River, and there in small boats to try the fishing. My friends caught numerous fine trout, while I had an opportunity of thoroughly doing an adjacent duck marsh, with but moderate results. My game was of an undistinguished sort, such as hawk, mink, porcupine, bluejays and squirrels, with a few partridges and pigeons. And here let me say, with due modesty, and for the encouragement of my gently sisters, that I seldom aimed at anything without feeling confident of success. Of course, my confidence has been frequently shaken, but still holds out, and I love to shoot.

Among the attractions of this river—which, in my opinion, does not equal the Jordan—was a spring of ice-cold water bubbling from a bed of rocks, and overhung with mossy logs. Lying here for a few days, we again took to our boat and bory patches, trawling for bass and catching a muskungee as we went. Never shall I forget the first night we camped. The day had been warm, but breezy, and we flitted from shore to shore, while the water, as it parted from our bow, made a merry monotone accompaniment for the banjo and guitar above, and our songs rang out and were echoed back from the wooded shores around us. As length we were summoned by the howl of a certain hillside to tarry for the night in its shadow. And running in under the lee of Horseshoe Island, we came to a stop in the stilly waters and went ashore in small boats—scurrying to the summit of the hill for a look at the surrounding country in the light of the dying day. Slowly descending, we found our guides had been not idle, as a large pile of red trout testified.

The picture still lingers in my mind. The last red glow of the sun, the pale shimmer of the rising moon upon the white sails of our little craft anchored upon the placid water, our bright camp-fire and frugal supper of bread,

berries and barbecued trout on forked sticks; while with the merry laugh and stories were mingled the sad notes of the whilplover's song. And thus was a bright day closed, and night came.

Many morning and shooting excursions have been my happy lot in company with genial companions; but of that another time.

P. C. G.

LAKEVILLE, Conn., February, 1880.

Editor Forest and Stream.

I wrote my former communication to you while my husband was off on one of his camping tours, and he saw it first in his paper, after his return. After reading a little he commenced laughing and said it reminded him of old Duke, but he soon recognized its author by the faithful picture portrayed. A friend in the city of N. B. also recognized the facts and said "Ruth forgot to tell about the pup losing his tail!" So I think it appropriate right here. This friend is also a sportsman, and at that time had more knowledge of dogs than my husband, so he said if he were in his place he would have the cords drawn out of the pup's tail so he would always carry it straight, and that the mode of procedure was to take the tip of the tail between the teeth, then give a sharp pull, and all at the same time, and the cords would draw out to the roots of the tail, and he also volunteered to do the job. They were in the sitting-room, and thinking to get it done before I knew it, and not thinking it would bleed, caught the pup and bit off his tail. Of course he got away as soon as possible and went around the room close to the wall making good time with both tail and feet, then out through the hall, and every jerk of tail, go with me. I put him in the baggage car and when I reached home I made him come to heel and took him to my husband's office and left him and the remains of my umbrella.

I saw one communication which pleased me very much. I think it was signed R. T. S., who says she goes hunting with her husband, but I think if she lived in Connecticut she would soon tire of hunting, as she seems to be a gun, but on prairie or open ground. Now I can shoot a gun, but I never tried going out hunting, for my husband is a man nearly six feet tall, and dresses in heavy boots and leggings and a waterproof suit that is heavy; and when I see that all scratched and torn and covered with mud, I feel sure he has seen some briars and swamps. But I can fish, and often go trolling on our lake and have caught some fine bass myself, and I am the fisherman of the family as my husband is the hunter.

I can cook the birds after they are shot. Perhaps you would like to know my methods of cooking, so I will tell you some of them. Woodcock are best broiled; quail and snipe are best fried with bacon, till done to a good brown, and grouse are good made in a pie or stuffed with oysters and crackers, but they should be parboiled always, as it takes all the strong taste from them. Of course this is no fancy method of cooking, but I assure you they are good, and I should like some one else try and see for themselves.

I think I must tell you of some dogs owned once by my husband and a friend. They were setters, six months old, when they came to them, and as they arrived in the evening were shut in the wood-house till morning. They were tired and so did not disturb us till morning, when they managed to get the door open and went on an expedition over the grounds. Seeing some hens by the barn they started to raid them. They singled out each a hen and went for them, and I never saw hens plucked so quickly before. There was a cloud of feathers, and the dogs were collared and shut up again, but no chickens were raised that summer, and only four were hatched, and those Duchess tossed up and caught till they died the second day after they were out of the shell. The following day the ducks raised a few, but they all had a cracked back, and I presume Duke tossed them too, but probably did not commence on them as young.

There is one dog in the village which seems to be a general favorite with the people. He belongs to a sportsman and has seen the day when he was hard to beat hunting, but alas! he is growing old and independent; he goes where he pleases and will go half a mile to beg a drink rather than help himself at the stream clog by. He is a great tease and also very affectionate. RUTH.

Answers to Correspondents.

W. O. O., Cincinnati, N. Y.—See advertisement pages for latter.

W. J. P., Pittsburg, Pa.—We cannot tell you where to look for live quail.

BRECK-LOADER, Pennsylvania.—This name is that of the gunmaker, who makes the gun.

G. S. O., St. Paul, Minn.—The *Nuttall Bulletin* is published at the Essex Institute, Salem, Mass.

H. W. B., Bangor, Me.—See note elsewhere relating to the dimension of Dr. Rollin's tent.

R. D. M., Cleveland, Ohio.—See "Sea and River Fishing."

F. E. FRANK, Lyndon, Ill.—For books on Natural History see answers in last week's issue.

W. J. R., Roxbury Station, Conn.—For bait seines, write to J. P. Travers, Hockman street, N. Y.

J. R. W., Greensburgh, Pa.—Black bass spawn when three years old; possibly they may reproduce when two years of age. They spawn in May and June.

SHIELDRAKE, Vincennes, N. J.—A good twist barrel will slightly expand when fired, but the contraction of barrel afterward has no effect upon the velocity of the shot.

C. S. S., Cincinnati, O.—The maker is at Liege, and makes good, cheap guns. The lever under guard is a strong action. When not in use leave hammer down on plungers.

A. B. L. You can run the river, and if there are falls or dams take them. 2. The only one of your lot which is not that of a maker. The guns bearing it are generally of low grade.

C. W. B., Boston, Mass.—By the term "Native" English setter, in the New York Show, will be understood a dog born in England, or whose sire and dam were both imported from England.

G. E. N., Bath, Me.—You should chamber buckshot in choke-bores, of course. Its use is dangerous and injurious to the gun. The matter has been pretty thoroughly written up of late in this paper.

MODEL YACHTS.—A correspondent writes that an English boat on model yachts, by Jas. E. Walton, Victoria Model Yacht Club, can be obtained from book-sellers generally. Price in London, 2s. 6d.

L. W. G., Greenfield, Mass.—Wm. Tallon, 111 Bloomfield street, Hoboken, N. J., can furnish you with pedigree of the dog to which you refer, if you are willing to pay for his compilation or copying in Ireland.

G. H. T., Philadelphia, Pa.—My setter pup, six months old, is rather curly. Will he outgrow this, or will it increase? Both his father and mother have straight coats. Ans. Unless inherited the curl is likely to decrease.

J. H. K.—The fish has been boiled out of your marine glue, and the residue is insoluble and useless. Begin with a fresh lot and do not allow it to evaporate over a fire any more than possible. Keep fluid by mild heat only.

W. No. 8, Columbus, O.—Please tell us what an 8-gauge shot gun ought to do at target, and the proper loading loads. Ans. We can tell you if you give weight of gun, tell us whether it is choked or not, etc. Your question is too vague.

BACK ACTION, Hartford, Conn.—You will find quail shooting at Tom's River, N. J., Focked River, N. J., or in North Carolina. For the former two, see pointer numbers under our Game Directory; and for last, consult note in another column.

L. M., New York.—Can you give me the name of a trainer of *Canis*, or black French poodles? Ans. We knew of a man, but he has disappeared from New York, and is probably away from some traveling show of trick dogs. Perhaps one of our readers may know. Ask the Aquarium managers.

W. S. K., Lawrenceville, Ga.—Was the Winchester rifle used in the late war? If so, did it shoot sixteen times? Ans. The Winchester is an improvement on the old Henry, which was used in the late war and carried seventeen shots. The gun did not take the name of Winchester till 1860.

CRUISER.—Wishes to know from our readers who have had actual experience in the use of the following designs:—1. Portability and facility of stowage. 2. Carrying capacity. 3. Sea-worthiness. 4. Wear. For yacht ensigns and burgees write to Annin & Co., 59 Fulton street, New York; also for price list.

P. F., Boston, Mass.—If you do not approve of the sports discussed in the *FOREST AND STREAM* and to the advancement of which it is devoted, do not read the paper. There are a good many thousand people in the United States who do participate in out-of-door sport, and ten years from to-day there will be as many thousands more.

F. AND A. J. C., New London, Conn.—The eyes of my pointer puppy are filled with matter all the time, and his breath is bad. What shall I do for him? Ans. Keep the eyes clean with tepid water, and perhaps use occasionally a little weak alum water. As to any dog who roars, howl from the disemper, proper feeding and plenty of exercise will in time correct the bad breath.

H. V. F., Rutheford, N. J.—Can you give me pedigree of my Gordon setter bitch, now in her fourth year? She was sired by Jerome's Shot, her dam being Duchess, which I think also belonged to Jerome. Ans. Shot was imported by Mr. Carroll Livingston; pedigree unknown. Duchess was imported by a son of Mayor Havemeyer, having been presented to him by Sir John Blight.

H. L., Hoboken, N. J.—Please inform me what I can give a dog who has the mange, to make his hair grow out. He is perfectly bare on some parts of his body. Ans. Attend to his general health and groom him once a day. No ointments or lotions are of any avail. Tepid wash twice a day, without soap, with plenty of friction, may be used to advantage. Is there any irritation of the skin? If there is, write again.

C. W. P.—My setter puppy is six months old; ever since he was three months old, has been troubled with belching. Has a large yard to exercise in and a good warm kennel in which to sleep. Has been fed on a general diet. Can you suggest a remedy? Ans. The dog will probably outgrow the hiccoughing, but you might administer a dose of oil, followed by twenty grains of sub-carbonate of bismuth after each meal.

S. P. O., Coudersport, Pa.—My spaniel dog has been lame off and on for some time. For the past ten days he has been quite lame, and on examination of his foot I found that between his toes it looks red and raw, and is swollen some. Ans. This is probably one of the various forms of mange, as I have seen it several times. Cure, advertised in another column. Give five drops of Fowler's Solution of Arsenic twice a day in food. Continue for some time and write us fully the result of treatment.

A. J. C., Bridgeport, Conn.—The sketch, "Spring Time by the Blue Ridge Trout Streams," was substantially the same as two sketches published in the *FOREST AND STREAM* last November. The mistake arose from a very curious train of circumstances, the author supposing that his original article—the one published last week—was lost, and rewriting it from memory. A comparison of the two forms in which it appeared is exceedingly interesting, as showing the working of the author's mind in rewriting a partially forgotten article.

J. A. C., Howard, Ohio.—Is it injurious to allow fox-hounds to lie on a haymow, preparatory to running? 2. Should they be tied up or allowed the freedom of the building? 3. Should they be thin in flesh, or in tolerable good flesh and solid? 4. What is the best food in preparing for a race? Ans. 1. Hay does not make a good bedding, as it is too dusty for dogs to lie or move upon; good clean straw is the best. 2. All dogs should be allowed their freedom. 3. They want to be in good training trim, as is the case with the race horse. 4. Meat diet, with plenty of exercise.

J. I., Bath, Me.—I send you a piece of dry, solid, hard spruce with a BB shot, fired from a Scott breech-loader at sixty long paces. It is one of three shot which, fired from the cylinder barrel, struck a No. 6 envelope. With the choked or left barrel I put seventeen No. 8 shot in the same envelope at forty yards, embedding them the full diameter in the wood. Have wound a kingfisher at eighty yards. The cylinder barrel will pattern 120 No. 8 shot in a 30-inch ring, at forty yards, and the choked barrel 235. How is this for a 12-gauge? Ans. Your gun has excellent penetration, and the pattern given of the choked barrel tip-top; that of the cylinder more ordinary.

J. S., Brooklyn, L. I.—I have a bound bitch which is expected to whelp on the 10th of March; will she be too cold to have her whelp in yard? Is also continually calling grass. 2. Will a gun 12-gauge, 28 inches, carry the same distance and have like penetration as one

12-gauge, 30 inches, both full choke and made by same maker as 1. Certainly; she should be comfortably housed. 2. The powder is generally supposed to have expended its full force at 24 inches. Hence a longer chamber is an advantage in aiming simply. But as we said last week, we cannot compare the shooting qualities of guns satisfactorily by these data. Two guns of exactly the same make and dimensions will shoot very differently.

F. L. S., Washington, D. C.—My setter, a pure Llewellyn bitch, eleven months old, came in heat a few weeks ago, and thinking her too young, I decided not to breed her at present; but by accident she was served by a native liver-colored setter of fine blood qualities, but with inferior points for breeding. Other points for breeding if any will this have upon her future progeny, and how will it affect her as a brood bitch, supposing hereafter she be served by dogs of as fine breeding as her own? Ans. She is liable in subsequent litters to have puppies resembling the size of the first. If the dog has the merits attributed to him by you, it will not affect her injuriously as a brood bitch.

J. A., Popin, Wis.—I would like to get some live carp; could you tell me the nearest place where they can be obtained? 2. Would you give me the color, height and other points of the King Charles spaniel? 3. Is he a good retriever? Ans. 1. Apply to your State Fish Commissioners, of whom the Secretary is Mr. G. L. Valentine, Janesville. 2. The King Charles and Blenheim originally belonged to the group known as cockers, but they are now only used as toy dogs. The color liked at present is black and tan, or black, tan and white. The original King Charles were black and white, with long ears and noses. The weight of a full-grown dog should not be under ten pounds. In *FOREST AND STREAM* of Jan. 23, 1880, there is an article on spaniels, to which we refer you. 3. The King Charles, like any other dog, can be taught to catch and carry, but his long hairy coat is apt to become covered with mud and wet, which occasions him so much distress that we consider him useless after an hour or two.

A. R., Cape Girardeau, Mo.—When I want a few hours' pure enjoyment I take down my file of the *FOREST AND STREAM* and revel in its pleasant pages, whereas I find no politics nor other party or personal strife to stir up bad feeling. In it all is harmony. I have a fine breech-loader which, after two years of constant use, I do not understand. We are told to use, for common use, three drachms of powder and sixteen grains of shot. I have no doubt it is fearful, often making my shoulder so painful that I have to stop for the day, and sometimes will be lame for several days at a time. To remedy this I have of late reduced the charge to two drachms, and as before one ounce No. 5 shot; with this charge I fail to bring down the game; bring showers of feathers, but few fowls. One gunsmith states that the shoulders of the shell chamber are too high, and the rebound is caused by the walls striking against them when they leave the shell; and he proposes to break them down a little, and lighten it. I have brass shell. The trouble is undoubtedly in the shoulders of the chamber. Have them trimmed down; it will greatly improve the shooting of your gun. We have known of many guns being improved by this. You cannot bring the birds down with two dr. powder.

FLEXION, Staunton, Va.—B. and S. shot a pigeon snail, 21 yards rise, 80 yards boundary, each having 10 birds and entitled to both barrels. S. at the gun winged his seventh bird with the first barrel, the bird dropping about 30 yards from the trap. B. remarked to S.: "You need not shoot again, I will give you that bird." The bird was retrieved from within the boundary, a few feet from where it fell, and scored to S. B. at the gun winged both barrels at his ninth bird, which being struck it about 55 yards from trap. S. remarked to B.: "I will give you that bird." In attempting to retrieve the bird it rose and flew some distance over the boundary. Referees decided the bird as lost and scored it against B., taking the ground that B. and S. had no say in the matter. Was the decision a correct one? Ans. Yes, so far as the actual performance of the contestants was concerned. S.'s seventh bird should have been scored, because he retrieved it within bounds; B.'s ninth bird not scored, because he did not get it within bounds. But B. gave S. the latter's seventh bird regardless of its being retrieved, and S. in like manner gave B. the latter's ninth bird; hence in getting the score S. should, as a simple point of personal honor, count B.'s ninth bird as dead. The custom in such a case also, where the shooters agree, is to score accordingly; as there was no disagreement here, the referee excused his authority.

NEWTON.—I have a pointer bitch pup, eleven months old, which for several months has been silling and very drowsy; poor appetite, cats but little; is exceedingly thin; about every two weeks she has a violent erythema, and lies on her back with feet extended; whines and barks as though in constant pain; then she will stretch, lowering her hind-quarters to the floor, fore-quarters well up, in which position she will stand five or ten minutes, when she will reverse, lowering the forward part of her body and elevating the latter part. One of these positions she occupies most of the time for three or four days, when she quiets down and becomes sluggish again. Her first attack was last fall while we were out grouse shooting. At this time she laid down, whined and backed, and seemed in the most violent pain, reluctant to move, and paid no attention to birds we shot. She is warmly housed, has been fed with scraps from table principally, also scraps of meat cooked with meal; have fed her raw meat some within last two months. She prefers sweet cake, doughnuts and any kind of sweet food to anything I can give her. Ans. Symptoms described seem to be those of a disease, in which case a dose of castor oil and laudanum when the symptoms first appear will afford relief; tablespoonful of former and half-teaspoonful of latter. It would be well to investigate carefully whether there is any existence of muscular rheumatism. Discontinue the sweet-cake-doughnut diet.

PUBLISHER'S DEPARTMENT.

[From the "Old Salamander Drug House," CHICAGO, Ill., Jan. 12th, 1880.] Messrs. H. H. WARNER & Co., Rochester, N. Y.: Gentlemen: We trust our order will reach you in season to be promptly filled. The demand for your Safe Remedies, especially the Safe Kidney and Liver Cure, is continuous and increasing, and our customers speak in the highest terms of their efficacy. Several cases of cures which have come under our observation are complete and most remarkable. Very truly yours, VAN SCHAACK, STEVENSON & Co., Adm.

—The tours planned and conducted by the Messrs. Cook, whose advertisement will be found elsewhere, embrace travel in every part of the globe, and by removing all the fatigue of planning and schedules, etc., the system is greatly improved. For several years it has been even more generally adopted than ever before. Whether the tourist goes alone, or with a party, he should avail himself of the numberless advantages of traveling under the care and direction of this bureau.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2533.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 26, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

FISH AND GAME IN QUEBEC.—The third annual dinner of the Fish and Game Protection Club of the Province of Quebec was recently held in Quebec, the following members and invited guests being present, Mr. Romeo Stephens presiding and Mr. W. H. Kerr, Q. C., occupying the Vice Chair: Hon. Peter Mitchell, Andrew Robertson, S. B. Foote, Lieut.-Col. J. H. Isaacson, Dr. F. W. Campbell, Jas. Stewart, Euclide Roy, Louis Sutherland, A. N. Shevan, J. H. Stearns, Hugh Beckett, W. S. Walker, J. Try Davies, F. Henshaw, A. Force, E. C. Monk, A. F. McIntyre, J. C. Wilson, P. Drummond, James Johnson, Jr., L. R. Ord, G. U. Ahern, Dr. Alloway, F. J. Brady, W. H. Rintoul, J. B. Robertson, A. Webster, Chas. Cassils, Arch. Cassils, Hugh Patton, C. Holland, W. S. McFarlan, A. Davidson Ross, John Robinson, P. E. Normandean, J. Reeves, representative of the Sherbrooke Club; Dr. Mayrand, representative of the St. Andrew's Club; Capt. Kane, Chas. Robinson, G. S. Wilson, Alfred Rudolf, G. H. Matthews, R. A. Alloway, W. Crowthers, etc. The occasion was one of much good feeling and mutual congratulation upon the success of the Society's work. Special and well deserved compliments were paid to Mr. Whitaker and his officers for their efficient services in fish culture and protection.

—London has had another six-days' walking match, Boston is threatened with a "female pedestrian" show, and Weston and O'Leary are to go-as-you-please in San Francisco. With these wars and rumors of wars on all sides of her, New York city is certainly to be congratulated upon her immunity and present freedom from this particular form of lunacy. Possibly a few more dog shows at the Madison Square Garden may elevate the sporting tastes of the populace to a higher form of amusement. New Yorkers could well afford to give up these walking matches, and, following the admirable example set them by the Westminster Kennel Club, substitute a series of annual horse and cattle fairs, pigeon shows, yes, and even catshows.

—The man who brought his pigeon to pot by shooting up the chimney, as detailed elsewhere in the account of a shooting match, performed an unparalleled feat in the annals of pigeon shooting, and as he probably devoured his bird, may reasonably lay claim to the discovery of a new species of "chimney swallow."

AN ADMIRABLE SCHEME.

SOME two years ago we described and commended the plan of the Jolly Club, a New England association of men, women and children, who repair each year to one of the beautiful headlands jutting out from the Vermont shore into Lake Champlain. Here the club has a miniature wild-wood village of rough and rustic but comfortable cottages, with the forest aisles for streets and the vast stretch of wood and water for corporation limits. The members leave their homes in various Eastern cities in the spring and gather at this delightful rendezvous for the summer months. Shooting, fishing, boating, archery, croquet, botanizing, sketching, dreaming in the hammock, and a dozen other diversions and amusements, make up the vacation life. The gentlemen come and go as their business demands, while their families remain to gain health and pleasure. We once fell in with a hard-working New York physician, who in mid-summer was hastening here and there among his patients and looking longingly away from the noisome streets of the city to the restful camp of the Jolly Club up in Vermont.

We referred to the club when we wrote of it before as a New England institution, and held it up as "a bright and shining example to be known and imitated of all good people, North, East, South and West, throughout the land." It is with much gratification, then, that we now note the probable adoption of the same plan by some of our friends in Michigan. Granted that the western projectors of the plan never heard of the Jolly Club, it is still on the platform adopted by the Vermont institution that the new club is to be founded. It is then a triumph for the Jolly Club party of American pleasure seekers, and we hail with much satisfaction the growth of such sound and healthful ideas of summer recreation. For the meaning is that men and women are coming to see in the great world of nature, and outside of the town, fit dwelling places for body and soul; and this in turn promises increased participation in the health-giving recreation of the forest and stream.

In his opening address to the members of the Michigan Association, at Bay City, the other day, President Holmes introduced the project of a summer or fall encampment for the members of the Association and their families. The meeting at Bay City, like all the conventions of the Michigan Association, was so wholly devoted to the more serious work demanding attention that there was not opportunity for much sport, nor did the season invite to the field. The proposition therefore was to select a suitable site on the bank of some lake or river, where, in the later summer or fall, tents and lodges might be erected, and where the members of the Association, with their families, might gather for such a time as might be found convenient.

Such a scheme in its main features is admirable. It proposes, first of all, to gather sportsmen together where they belong—in the field. Save for a business meeting, a convention of sportsmen in town is a manifest anomaly. The practical instruction to be gained, the theories to be advanced and tested, the mutual giving and receiving of instruction in woodcraft and field work, all these things are to be accomplished out-of-doors. Two days of actual field work will accomplish more than two weeks of theorizing in a hall.

Again, the comprehensive plan proposed includes the family. The views of the FOREST AND STREAM on this point are so well known as to require no exposition here. We have set before us as our mission the advancement of field sports in their proper places and a participation in them not as the chief end of man but as conducive to accomplishing that end. We have taught that the man who is engaged in commercial pursuits is a better business man if he exchange for a time his day-books and ledgers for the fly book and tourist's guide, and that the professional man will be most successful in the long run, who breaks away from the routine of his work for a trip into the woods. Some men become so nervous and fidgety and out of sorts that their fellows are glad to miss them for a time while they are battling the black flies up in the Adirondacks. Society ought to ostracize such of its members and send them off to become men again in the wilds. We do not have room for the expansion of our souls in the city. The best natured men in the world are those who come into the FOREST AND STREAM office on their return from a vacation trip after quail or trout. One cannot help breathing in good nature with the ozone of the pine woods; one's jarring spirits must come into tune again in harmony with the strains of the forest trees swept by the night winds, and the metallic music of the woodland rivulets. There is no such soothing melody of man's handicraft as these harmonies of nature's chords. And if this dwelling in tents or sleeping beneath the sky be good for one man, it is good, too, for a score or a hundred, and for old and young, men and women. It is that we may instill into our children something of our own tastes that such schemes as this of a woodland encampment deserve to be put into execution. The plan offers an excellent supplement to the sportsman's regular field days.

Michigan and Wisconsin and Minnesota are rich in beautiful sites for such enterprises. Within their borders

are scores and scores of inland lakes, surrounded by dense forests, where fish and game abound, and will abound for a century to come. The railroad facilities are such that easy access may be had to the chosen camp, and men or families may come or go as they choose.

The plan just in the form proposed by the President of the Michigan Association may, however, prove impracticable. Hail fellows well met, who are the best companions in the world for a genuine roughing turn, will not stand the ordeal of a family encampment. What means quiet enjoyment to one man is an insufferable bore to another. A miscellaneous gathering of sportsmen—admitted to the hospitalities of the grounds on the strength of their sporting proclivities alone—might not prove the congenial company anticipated by the projectors of the scheme. Indeed, the demands of such companionship are exacting in the extreme. To make a success of a woodland camp the membership must be determined by the same rigid rules which obtain in society—those who make up the controlling element must have the privilege of excluding uncongenial factors, and for this reason it strikes us the plan of President Holmes may to great advantage be so modified as to provide for a careful selection of the guests.

This is something which time will try. Let the experiment, in some shape or another, be put to the test not only in Michigan, but in every State in the Union. If it has already been introduced and successfully accomplished, let the fact be known through the FOREST AND STREAM, for the instruction and benefit of others.

NATIVE AND TRANSPLANTED FISH.—Our angling friend, "Dexter," of Albany, commenting upon the gradual disappearance of our strictly indigenous fish, agrees with us that the artificially grown fish lack the pluck and gaminess of their predecessors. He says:—

Ten years ago, when first I commenced fishing in the Mohawk River, the black bass, small mouthed, were there in abundance; and noble fellows they were, too—strong, heavy biters and savage, vigorous fighters; their flesh hard, slaty and delicious. In a few years they commenced to grow scarce and a fresh supply was added. The past few years we have been catching plenty of them, a trifle under size. When they bite there is not the slightest resemblance to the actions of their predecessors, but just the opposite; they are not as strong fighters when hooked. Neither do I consider them as good eating.

Making all due allowance for the lapse of years, during which the fishing of the past, in common with other pleasures, takes on the excellencies of a backward vision, there are very patent reasons why the artificially bred progeny should afford comparatively tame sport. In the natural state the fish are all subject to the law of the survival of the fittest. It is then only the strongest, most vigorous, and best fighters that live to take the fly. Give us the dwellers in the swiftly rushing streams, whose months of battling with the turbid waters have developed their full game qualities; they are worthy of a man's best skill; to drive them quivering and palpitating from their watery home is no child's play; they alone are fit objects of costly tackle, railroad fares and long trips. One lordly monarch of the wild wood pool, lying on the grass while your own heart beats with exultation, will make the beam descend, though there be a dozen liveried sluggards in the opposite scale.

GOOD QUAIL SHOOTING.—A gentleman who has just returned from Cleveland County, N. C., reports the quail shooting there the best he ever found anywhere. He stopped at King's Mountain, which is on the Piedmont Air Line, thirty-three miles from Charlotte, N. C. The route from New York is to Washington, thence Richmond and Danville Railroad to Charlotte; fare, \$16.50, which includes tickets only. King's Mountain has two hotels, terms moderate. The country is rough and the shooting grounds close at hand. The birds are abundant, every after bevy flushed in succession, and large bags the rule. Visitors should take their dogs with them, as the local supply is limited. If this information is not specific enough, a letter may be sent to Capt. Bell, at King's Mountain, who is one of the two sportsmen in the place.

BURROWING QUAIL.—The same gentleman relates a novel incident which transpired during his stay at King's Mountain. With his companions one morning he was approaching a little ravine, where from appearances he judged there were birds, when sure enough his dog came to a standstill. Coming up, they found a dead quail a few feet from the dog, which evidently had just been killed by shot, presumably from their own guns, and then mangled by some animal or bird of prey. But this was not the object of the dog's attention; he was pointing to a hole in the ground, a discarded burrow perhaps, some few feet away. Wondering at this, our friend's guide stooped down, put his arm into the hole as far as he could reach, and pulled out a live quail. They took some sticks and dug away the mouth of the hole; the arm was again inserted, and out came another quail; a third bird was added to the novel capture, and then they stopped, not because there were no more quail in that hole, but because they could not reach any more. The presumption is that the birds, frightened, had taken

refuge in this underground retreat; but their ignoble capture, like that of Reynard in his hole, was certainly extraordinary in this country, where we are not accustomed to run our birds to earth.

NOTES.—The table of contents which will hereafter be found upon the first page will materially facilitate reference to current numbers and to the files. This is an improvement which, with the introduction of date lines now at the top of every page, will be appreciated by our readers.

The pot called the kettle black, and it is not an infrequent thing to hear a self-confessed violator of game law sportsmanship and decency envenom against the professional pot-hunter.

Every aggrieved angler owes it to the craft to resist the implication in the current newspaper squib that "it's the amateur fisherman who hires a haul."

Several months ago we commended the plan of a FOREST AND STREAM scrap-book, and we have since learned of several such books being made. Those who do not preserve their files will find the scrap-book an excellent thing. The amount of matter worthy of preservation in such form is greater than one would think without trying the plan. One of our correspondents writes of a set of books kept by himself, one devoted to natural history, another to hints and instructions in shooting, another to fish and fishing, etc.

We wish to call especial attention to the advertisement in another column on wild rice. Many of our inland ponds might be made the resort of wild fowl by a judicious distribution of this very nutritious and thrifty cereal. It has proved of vast benefit in the West. Mr. Chas. Gilchrist is a sportsman of practical experience in the habits and feed of the aquatics and knows whereof he speaks. The rice is very prolific after the first sowing, and spreads very rapidly. It is also very fine in flavor as a dessert.

The paper on our first page descriptive of the route to Parmachenee Lake and the Rangely Circuit contains as much information as the average guide-book—and more, too, for the author wrote it to supply just the facts omitted in the hand-books of travel. Prospective Maine tourists may profitably adopt the suggestion to preserve the pages for future reference.

The index to Volume Thirteen will be forthcoming shortly. Its publication has been unavoidably delayed, but we trust its usefulness may be in no wise impaired thereby.

As the spring is near advancing we are receiving requests for information about fish and game resorts. The directory which has been organized at this office is receiving the attention of our friends and has already proved of material assistance. We again remind our correspondents all over the land that they may render valuable aid in this work by sending in at an early date such details of shooting and fishing resorts as they may be informed of. Postal card reports are amply sufficient. See the notice in another column.

To our correspondent, "Guy Rivers," who some time ago detailed in these columns his luckless adventures during a voyage down the Mississippi, we commend the newspaper accounts of the tour of Capt. Hemphill, now on a honeymoon trip down the Father of Waters. The happy couple have their boat all to themselves—not another soul on board. The craft is decked with flags, streamers and evergreens, and the popular captain is everywhere hailed with steam whistles and cannon.

Ruskin will lecture on St. Patrick's Day before the London Institution, and his theme will be: "A Warning to Snakes." He is reported to be a student of snakes. What Ruskin has to say about them, whether his lecture be scientific or not, will be well worth listening to.

ACKNOWLEDGMENTS.—It will be remembered that we noted some weeks ago the sad death of Mr. E. B. Staples, of Sarasota, Fla., who had been known for years to our readers as Major Sarasota, and we mentioned at the same time the straitened circumstances of his family. It gives us pleasure to publish this acknowledgment from Mrs. Staples, which is dated at Sarasota, Fla., Feb. 5th:—

I desire to express through your columns my grateful thanks and appreciation for the sympathy and aid which has been extended to me and mine in our hour of great desolation and destitution. On the 15th of November I received from your corporation twenty-five dollars; Thanksgiving day, from Capt. Silas Stearns, appointed by the Smithsonian Institute, a magnificent supply of groceries and ten dollars in money; Dec. 9th, from Mr. John H. Knapp, of Wisconsin, five dollars; Feb. 1st, from Mr. W. Crosby, of New York, five dollars, and from Dr. Ferber, Mr. Brooks, Mr. Steels and Mr. Benedict, twenty-five pounds of bacon and five pounds of coffee.

GAME PROTECTION.
Secretaries of game clubs and others are invited to send us early notices of changes in game laws, reports of the doings of societies and other notes of news.

THE DEPLETED GAME OF LONG ISLAND AND ITS RESTORATION.

BROOKLYN, Feb. 15th.
LONG ISLAND, that once famous Utopian, but now almost deteriorated paradise of the sportsman, has not been totally exiled from the memory of a few gunners still living, whose conviviality filled the halls of Jim Smith's tabernacle in years gone by, and who still seek employment for the spaniel and the fowling piece among her meadows, bays and woodlands; scenery rivaled by none elsewhere on the continent of North America. The painted grouse, once abundant from Brooklyn to South Hampton, takes no more its noon-day siesta within those obscure coverts; the drum of the ruffed grouse is heard less frequently than in former years, though this bird is by no means extinct, and the noble stag, who in early days broke his fast and slaked his thirst where grew the lily pads in many limpid streams, have, save a few degenerated stragglers, left the slopes for holts far remote from the mirth and merriment of man.

Albeit these denizens, like the red man, have fell by the tyranny of the pale face, Long Island still possesses attractions for the sportsman which might be multiplied were her game laws properly enforced. It was the neglect in this respect that suffered the extermination of the heath hen from the brush plains, though as early as 1791 laws were framed for her preservation, but alas! they were not enforced, and before those who have never been there, the facts would be given the widest incredibility; and not wishing to fill the young sportsman's heart with the sorrowful regret that he had not been thrown into this world twenty years earlier, I may be pardoned if I omit the record of some of the bags made in this vicinity, and simply add that if the eel pots be destroyed, and the luxuriant duck-weed allowed to grow again, in a few years quite respectable shooting may be had at this old haunt; otherwise I prophesy the absence of those days forever.

But Long Island is yet a favorite hunting-ground. Myriads of wild ducks and geese throng to the placid bosom of her bays and inlets, and the little quail is also abundant in some of the rural districts. Though I do not admire nor countenance summer woodcock shooting, I could take you, reader, were I so inclined, to where you could indulge to your heart's content in this unsportsmanlike sport; but I know you would refuse to go. I know of a covert whose familiar picture is now before me; a small piece of swamp and thicket whose full radius does not exceed two furlongs, where, on the 3d of July a year ago, well known parties from this city killed woodcock whose aggregate numbered into the forties; and on the day following another party, numbering four gentlemen, killed a similar quantity in a brake about a stone's throw from the first mentioned locality, which had been reserved for them; and had they swayed over other lands adjacent the result of that day's woodcock shooting would have reached a heavy figure. All this was accomplished within a few hours in the morning. I have to add that ere they found their way to the tables some of them were as fat as the turkey.

Such is a faithful representation of the past and present of the once famous one hundred and twenty-five miles of sand bar, and all, yes, I shall venture to say all, for the lack of wise legislation.

There are, perhaps, no gurgling streams, no meadows, no glens or leafy woods, in which the errant cow-boy can pillage with such safety as those upon Long Island. Obscured in a Suffolk County hamlet, he sets his snares when the sun is sinking behind the woods, and knowing their whereabouts, he scarcely awaits the dawn when he has his traps emptied, account of stock taken, and while yet the villagers are dreaming has found ready sale to some baggage master on the railroad. What does he know about section so-and-so of the game laws; much less, what does he care when ten cents may be readily obtained for a "plump" or perhaps a half-starved "Bob White"—poor "Bob," my heart beats with love for thee! and when he has promised the baggage master the day previous to bring such-and-such a number the next morning, and then roaming about the village "cock-a-doodle-doing" as to how he "ketched" "leven" quails and "tree" woodpile quavkers and "a duced of a big buck rabbit," and changes the silver from one pocket to the other, or goes out at noon, when, if by chance he should meet farmer Jones's African—gun he has none. So how can he be made to respect a legal notice? Who is going to watch him? What will be done with the small boys?

It has been said to me: "What care you or I what these fellows do, so that we have birds to shoot at?" I'm thankful that my mind was never trained to such a view of things, or good as it is, and to tell the frank truth I pay far greater attention to the movements of the habitants of the woods than I do to the maneuvers of my own race. I want to see the lower class of animated nature protected; I want to see the few sections of law worth anything at all duly enforced; I want competent men to handle all the game legislation; and I don't want a two years prohibitory law, nor the shot gun taxed. It is not necessary to go that far at present.

And now, how shall we get about this thing effectively? I will tell you. Let every sportsman put in an appearance at Seneca Falls next July. Let the council fire be kindled, and let our supplications rend the winkle. Let us agitate this subject to such an extent as to demand attention. It is an American idea that when a portion of the community feel burdened with that portion of law relative to them, they shall have a say in the matter. It is the duty of the State Association to think gravely upon this subject.

Mr. Editor, I give the prefatory notes upon Long Island to show what that locality was once, and to show what it is now, and what its future is likely to be.
HARRY PENWOOD.

MIGRATORY QUAIL.

BOSTON, Feb. 20th.

Editor Forest and Stream:—

The quail reach Messina in their migrations about the middle of March, and the flights continue until the middle of April, sometimes until 1st of May. A letter is from two to three weeks going from here to Messina. The latest possible time for sending an order (and getting it executed) would be the first part of April. The latest date at which an order could be sent and be probably executed would be considerably earlier. To make this clear I quote as follows from a letter of Mr. Braun, dated Jan. 17th, 1880: "A short time ago one of our Messina papers brought out an article stating that the catching of quail was to be prohibited entirely before next spring, and consequently I abandoned all hope of further exportations. But now I hear that the licenses which were given out last spring for the duration of one year will remain in force for their full term, so that those catchers who took their licenses late last spring can make use of them for a part of the next flight. No licenses are no more given out under the previous conditions. Before, any one who had a license could go catching anywhere in the whole Kingdom of Italy. The license was personal, and cost only 20 shillings. Now a new law has been issued, according to which the new license is personal and can be used only for a marked piece of ground not exceeding 25 meters (about 27 yards) in length, and 20 meters (about 21½ yards) in breadth; and, besides that, the cost has been raised to 60 shillings for each license. These determinations of course do away with all hope of getting any more quail after next spring, as nobody can see his way clear to pay 60 shillings for a license on which he may, perhaps, be able to catch not twenty birds during the whole flight. This is the work of our sportsmen, who fear that the increasing demand for live birds will reduce the stock of quail, and perhaps in time will end to our quail hunting. As the birds appear here in such immense quantities, I doubt whether this would ever be the case, but I must acknowledge that the bird-catchers are very annoying indeed when one is out gunning."

It is plain from the above extract that it is better to have all orders in by March 1st at the latest. At the same time, it is not at all improbable that orders sent in as late as the middle of March, or possibly, the 1st of April, would be executed. Our first order will be sent forward on or before March 1st. If any who desire to import cannot get their plans completed by that time they can order later, and all orders received before April 1st will be sent along to Mr. Braun, the gentlemen ordering bearing in mind that in all cases Mr. Braun reserves the right to return the money, less the small cost of the exchange, if he cannot obtain the birds without loss to himself. After April 1st I think it would be useless to forward orders.

The following letter from Mr. Braun may be interesting to your readers.
HORACE P. TOBEY,

MESSINA, Jan. 26th, 1880.

Mr. Horace P. Tobey, Boston, Mass., U. S. A.:—

DEAR SIR:—According to your request in your last favor, I will write you a few lines upon matters connected with migratory quail, giving you in a few words such facts as I have gathered from my own experience. I will begin by saying that the quail are not stationary with us, or at least not here in the vicinity of Messina. A few have, however, been found to breed in the plains near Catania. During their short stays here in spring and autumn they must be considered as travelers, and their habits are not the same that they are at their home there, as at their resting place. They are here almost first to death by their long flight across the sea, and oftentimes they are so exhausted that they fall down in the streets of our city; then they can be easily picked up. Some that cannot stand the long flight are often seen to drop down into the sea, where they show themselves to be clever swimmers. They lie quietly on the surface of the water and lift one by one to the wind, thus spreading a miniature sail, by which they are carried safely to the shore.

They migrate almost exclusively at night, very rarely in the day time. They generally arrive here in the morning early, remain during the day, and continue their migration the coming evening. When it is moonlight they fly high and alight upon the mountains; while with a covered sky they fly low and alight on the plains. I have not been able to find out here that the quail have a particular time for feeding and another for resting, as I have seen them move about in all hours of the day. This is owing of course to the irregularity and disturbance they meet out here. But in Germany where they nest I have noticed that they have about the same habits as the partridges, viz., feed in the morning early, toward noon and at sunset, and lie up the rest of the day. They make their nests upon the ground, and have no nest, but are in the choice of their nesting place. The female lays from eight to eighteen gray-colored and duck-sprinkled eggs, which are about the size of pigeons' eggs. The young, like the young of the partridge, are able to run about the day they are hatched. I have seen them run with a part of the egg-shell still on their backs. The quail generally does not breed more than twice a year.

The catching of the quail is done with nets and snares. The former implement, which is mostly used on the Italian continent, is the same kind of net that is ordinarily used in other countries for catching birds. The entangling is done at night, and in order to attract the passing birds the catcher uses a decoy whistle, with which he imitates the monotonous "pick-trick-wick" of the quail. The implement mostly used here in Sicily for catching quail is the snare. It is used in the following way:—

The catcher digs in the winter small trenches, about twelve centimeters (about four and seven-tenths inches) broad, in the field, on each side of which he sows rye, which forms in spring, when grown up, a kind of an alley. Across the trenches the catcher fastens, about fifty centimeters (about nineteen inches) apart, small sticks in such a manner that a quail can comfortably pass below them, but the middle of each stick, which is a "hot" hair, is fastened, and in the trench some seed (her-

is the best) is scattered. When the quail goes into the trench to feed on the seed it gets caught by the neck. To your question what kind of dog we use here to find the quail, I must reply that in this country, where almost every one pretends to be a sportsman, all kinds of dogs are used, even terriers and poodles not excepted. But no doubt, spaniels and pointers are the best dogs for quail shooting. The quail generally squats before the dog, and remains a good while before starting to fly; but when it is rainy weather I have experienced that they don't squat, but run before the dog. Shooters here generally go out alone, and every one shoots on his own account. During the flight in spring our mountains and corn-fields are perfectly covered with shooters, and when quail are plentiful the firing seems like that of a general engagement. With a good dog a successful shooter can well kill 100 or more quail in a day. Two years ago last April I shot with my central fire gun, caliber 16, powder FFF and shot No. 10, seventy-three quail, from 3 to 8 o'clock in the morning, and might have shot many more if I had been better provided with ammunition. Though the quail arrive here in large flocks they separate during the day, and are mostly found singly. Toward the end of the flight in spring, they are often found in pairs. They stay only one day with us, and as they always fly against the wind it often happens that one day we have plenty, and if the wind changes in the evening not a single one can be found the next day.

Yours, very truly, CARL F. BLAUN.

MIGRATORY QUAIL IN PENNSYLVANIA.—The following, taken from the *Westchester (Pa.) Republican*, will be of interest to many of our readers:—

Since the close of the shooting season sportsmen have been comparing notes in regard to the Messina or migratory quail, which were turned loose in Chester County last summer, and the general conclusion has been that the birds scattered over a large area of country on being set free. In conversation recently with a resident of West Marlboro Township, he informed us that while out shooting with a companion in the fall the dogs flushed a covey of birds consisting of a hen and seven or eight half-grown birds. On rising they flew close to the ground in such a way that made it exceedingly difficult to get a fair shot, and the hunters only succeeded in obtaining one young bird, which they decided to be a cross between the imported and domestic breeds. This is the only case of this nature coming to our notice, but we would be glad to hear of anything in connection with the introduction of these birds.

MIGRATORY QUAIL IN VIRGINIA.—*Rock Spring, New Baltimore, Va., Feb. 9th.*—As it may be of interest to those gentlemen who have been to the trouble and expense of importing and turning down the "European" quail, I wish them to know through your paper that one pair settled close to me last year, bred and reared a brood of about a dozen. They never were disturbed by gun or dog all season, and only one young one was killed by chance, in this way: the colored boy when crossing a branch at the head of a swamp the whole brood fluttered under the horse's legs, and he made a cut at them with his whip and killed one. What became of the others I can't tell. On rising they are "away down in Tennessee" by this time, and should I hear of them again, or others, this fall I will report.

BOB WHITE.

THE NEW JERSEY LAW.

RAVEN ROCK, N. J., Feb., 1880.

Editor Forest and Stream:—

Your Morrisstown, N. J., correspondent, "Jersey," goes over those who oppose his pet woodcock law rough-shod. There is before the present Legislature some bill a dozen or so in all; not one that should be allowed to become a law, if the true sportsman and the people of the State could have their say. No one of them is intended for the whole State, but for some favored localities. For instance, in Hunterdon, Mercer and other counties, woodcock breed in goodly numbers, and leave on the first full moon in July, or sooner if the season is favorable, and are seldom afterward seen in these localities; consequently they have no fall woodcock shooting, although they breed there. Northern Jersey will receive the benefits of such a law, as they go there during their moulting season, so there is nothing wonderful in the opposition to the proposed law from parts of the State affected, while other localities more favored are advocating it.

The Game Protective Association have inclosed a proposition to open the close season for rabbits and quail from the 10th or 15th of October, instead of November 1st as at present, and I have reason to believe their bill is now before the Legislature. Such a bill should be branded as the pot-hunters' bill, calculated to exterminate the game of New Jersey before it is fit for use. What an exhibition of skill it would be to see a member of the Association rally forth on the 15th of October, flush a covey of quail, drive them into some grassy meadow, and then shoot them all singly while they are yet tame, and some of them not much larger than sparrows. None but villainously bad shots and pot-hunters advocate such a law. Still this Association does it. Am I correct?

If Senator Lawrence will introduce a bill for the prevention of wood-chopping, and to stop the gun from shining so hot, so as to not dry up our swamp lands, he will accomplish as much in the way of woodcock protection as by the proposed law. No true lover of shooting wishes to see our game birds ruthlessly destroyed; but when one section of the State attempts to legislate in their own interest and against another section, they will find opposition, and not altogether from selfish persons or notoriously bad shots, either.

Of the half dozen bills before the Legislature, there is but one that deserves consideration, and that is Senator Lockman's bill, prohibiting the use of gunno birds and rabbits from Jan. 1st to Dec. 1st. Amend his bill, make it read from Dec. 15th to Nov. 15th, then those villainously bad shots early in the season, and tracking snow hounds in the late season, will have to confine themselves to one month, which, owing to the growing scarcity of game is enough for all practical purposes, the Association to the contrary notwithstanding. FAIR PLAY.

NEW YORK, Feb. 18th.

Editor Forest and Stream:—

Although at the present not a resident of New Jersey, I consider myself somewhat of a Jerseyman, having lived there formerly, and there for the last fifteen years.

"Jersey's" belief that nine sportsmen out of ten are in favor of a law prohibiting summer shooting is, I think, wrong. I agree with him in regard to the law, but I do not believe that nine sportsmen out of ten are in favor of it. According to an old law of New Jersey, any man has the right to shoot on his own land the year around, or he can transfer his right to any of his friends, provided he gives him his permission in writing. The upshot of it is that every year by the 15th of June the woodcock are nearly all killed. A few years ago—not so very many, either—I had occasion to go to Paterson on a visit on Decoration Day—that is, the 30th of May. Happening to take a walk through the country with a friend of mine, a resident of Paterson, we heard, or rather counted, thirty-two shots fired in a piece of wood adjoining a swamp. We crossed the fence, and came face to face with the shooter. His dog was then on a point. Up jumped a half-fledged woodcock, and bang! went the gun. Evidently the bird was untouched, but as he could not rise three yards above the ground our sportsman's dog caught him in the air before he could alight. This sportsman proved to be a permanent and most active member of the Paterson Game Association—so I was told afterward; but as he was shooting on his own land, he could see no harm in shooting woodcock on the 30th of May.

I have not the slightest doubt that if "Jersey" counts among his nine-tenths this kind of sportsmen, he is certainly right; but if he counts as sportsmen people who cannot go out shooting whenever they please, but only do so when the law is off, he is certainly mistaken.

I have not missed in New Jersey one single Fourth of July for the last ten years, but I must confess I have found the birds becoming scarcer and scarcer every year, because they had been killed before the season by parties that hunted on their own grounds, or by some friends of theirs from the city, to whom they had given permission to shoot.

If "Jersey" can prevail on Senator Lawrence to have this old law repealed, I have no doubt that he will find very little opposition to his bill; otherwise there will not be any necessity for this new law, as by the 1st of October there would not be left any more woodcock than there is now under the old law. The land owners and their friends would shoot anyway, and, as the boys say, would have all the "pudding" to themselves. Rise up, Jerseymen!

There is no such provision in the present New Jersey game law; and the old law referred to by our correspondent is repealed by the late laws.

BLISSBURGH, N. J., February, 1880.

Editor Forest and Stream:—

In this vicinity (eastern part of Warren County) we have very good woodcock grounds, and the birds found only enable us to break our young dogs. During July we generally find a few birds and can manage to bag five or six in an hour or two of hard work. In October or November we very seldom get a chance at them. This is owing, I suppose, to their being all shot off during the summer. I agree with "Jersey" in all that he has said on this subject. There is little pleasure in shooting half-grown or partly-fledged woodcock, especially when the thermometer stands at 90 deg. in the shade and nearly every thread of one's garments is saturated with perspiration.

Old sportsmen here tell us that fifty or sixty years ago there were plenty of good woodcock grounds, and it was no straining feat for two guns to secure a bag of sixty birds in a few hours. Now nearly all of these grounds are utilized, and where once were large tracts of alder swamps there are farms or fields.

Some of our selfish sportsmen argue that if we get no shooting in July we will get none in the fall, as woodcock move southward then and are not to be found. How they know that none will be found in the fall I cannot tell, for there has never been any left for July to be found at all until the next year. Let us have no summer shooting at all and then we can know the truth. I am in favor of having quail, woodcock and grouse shooting open Oct. 15th. If we are to have no woodcock shooting until October I think we ought to quail shooting at one and the same time.

P. H.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl. "Day birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, snail birds, phalaropes, avocets, etc., couling under the group *Limicola* or shore birds.

GAME AND FISH DIRECTORY.

In sending reports for the *FOREST AND STREAM* Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

INFORMATION WANTED.

Correspondents are desirous of information of the above nature relating to (1) Bush River, Md.; (2) good quail shooting in Ohio on the line of the Pittsburgh, Cincinnati and St. Louis Railroad; (3) localities for camping out in the vicinity of Gratton, or near the Cheat Mountains, in West Virginia; (4) snipe shooting within 60 miles of Indianapolis, Ind.; (5) the name of a guide living at or near Brulé Lake, ninety-five miles north of Ottawa.

COOKING SEA FOWL.—*New Bedford, Feb. 21st.*—Your correspondent asks the mode of removing the fishy taste of sea-fowl. It is well carefully remove the fat from the inside, and then skin them, soaking a few hours in water to remove the blood, he will find that sheldrakes, white-wings, etc., will taste no more fishy than a duck or goose, and, in fact, a sheldrake served in this way is as palatable as a wild partridge. Even an old loon under this treatment makes a very good dish. I write from experience.

COSCHA.

Brooklyn, Feb. 23d.—My mother used to cook ducks and sheldrakes in the following manner: First, put inside of each bird one or two onions, then put them into a pot of cold water, and set the pot over the fire until it just comes to a boil. Then take the ducks, rinse them out, and roast them same as any other fowl. Even coots, when cooked this way and served up with currant jelly, are not to be despised.

LONG ISLAND SPORTSMEN'S ASSOCIATION.—A meeting of five delegates from each of the following sporting clubs of King County—Long Island Shooting Club, the Brooklyn, Fountain and Nassau Gun Club, and the Long Island Foresters' Club—was held last week at the rooms of the Long Island Club, and after a long discussion growing out of a misunderstanding on the part of the delegates of the Long Island and Brooklyn clubs, they supposing that the former meeting was merely temporary in character, it was resolved that in order to remove all misunderstanding on the subject the "members of the several clubs now present do now enter into a permanent organization, known as the Long Island Sportsmen's Association." This was passed unanimously, and the following officers were then elected:—President, Mr. G. A. Chappell; First Vice-President, Dr. H. P. Aten, Brooklyn Gun Club; Second Vice-President, Dr. W. Wynn, L. I. S. C.; Third Vice-President, W. Solover, Nassau Gun Club; Fourth Vice-President, Charles E. Fiske, Fountain Gun Club; Fifth Vice-President, Henry Thorpe, Long Island Foresters' Club; Secretary, Abel Crook, Fountain Gun Club; Treasurer, R. Robinson, L. I. S. C.; Assistant Secretary, H. B. Cook, Fountain Gun Club. An Executive Committee, consisting of five members from each club, was then appointed, the officers of the Association being members *ex-officio*. The meeting adjourned for two weeks, when by-laws will be adopted and active measures engaged in toward effecting the object of the Association.

A NEW PENNSYLVANIA CLUB.—*Northumberland, Pa., Feb. 16th.*—A meeting of the sportsmen of this place was held on last Saturday evening to form an association for the protection of fish and game. Officers were elected as follows:—President, Jesse James; 1st Vice-President, Jos. Auckst; 2d Vice-President, Sam. D. Burk; Treasurer, W. E. Taylor; Secretary, J. C. W. Brown; Members present, Zachary Taylor, G. W. Smith, C. C. Jones, Jos. P. Heine, Geo. Saridge, Jas. K. Bright, Levi Busler, W. F. Garrihan, Geo. Fiegew.

This is something that has long been needed in this section, and if the right steps are taken it will be a great advantage to farmers and sportsmen. The association was named the Susquehanna Sportsman Association, and a bounty of fifty cents will be paid for all hares and birds, at certain distance, except to members of the association.

J. H. C.

OMO—Woodstock, Feb. 18th.—This has been a sorry old winter to the lovers of field sports in Ohio. No quail shooting, and on account of the mild winter, no other shooting to speak of, until within the last few days. There have been a few wild pigeons flying, but no regular flight that I have heard of. I have not seen a dozen wild ducks this winter, which is something remarkable in our part of the State.

T. M.

OREGON—Portland, Jan. 28th.—In company with B. of Cedar Creek, W. T., I paid a short visit to the flooded grain fields of Washington County last Saturday, and we had some fine sport, bringing home thirty-five quail, seven numbers of ducks, geese and swans. We experienced a hearty welcome from Mr. J. L. Hallett, at whose handsome farm we made our headquarters, and whose hospitality is always extended to the sportsman. At a small lake near this place a short time ago one of the farmer boys killed twenty-nine ducks at one shot, and crippled several more.

MULTNOMAH.

JUST WHAT WE THINK.—*Indianapolis, Ind., Feb. 16th.*—Of course I cannot get along without *FOREST AND STREAM*. No orthodox minister can live without it and not suffer. I am waiting for the duck season to open, and meantime occasionally clean my gun.

M. W. H.

Ellsworth, Wis., Feb. 8th.—I have shot buckshots at deer with good success. First, you can't expect shot to go true unless they are round; and, as you buy them, there is usually a perfect oval in a sack. Play off your tents and feathers, which used as rudders to steer them. So I take an old ale and brush off all of these one by one, and drop them into an old stone jug, throwing away all that have holes in them. Then shake for about a minute, till they are all smooth—then I have perfect shot. Now, in loading shells, the more powder you use the more force you get on the shot, and the more they scatter. So in loading, decrease the powder instead of increasing, as most men do. I use in twelve shells 24 drams E. powder, and four layers of buckshot; that will chamber four. I find they make an even spread, with sufficient penetration.

S. W. S.

SOME GUNS THAT I HAVE OWNED.

IN what I am about to write, I solemnly disclaim any intention of either praising any make, or makers of guns, or to record anything to their disadvantage, but simply to give my own honest impressions of a good gun, and to say something of some that I have owned.

It was in 1849 that I bought my first gun. The callow days of sweet sixteen made me look upon that gun as perfection. Thirty-six inches in the clear, with a drop of seven inches in the fore-end, a long, straight, and slender barrel, which would kill squirrels like a stroke of lightning, and would kick like a newspaper male. Years have rolled over my head since, and I have had many hairbreadth escapes by flood and field, but on looking back, with my present knowledge of guns, I think I was never in more danger than when I fired that gun with a full-size charge.

In the light of subsequent events I now know it. My uncle owned a slave, about my own age, whom I had taught to shoot, and who was my *Edna Achates*, accompanying me in all my hunting excursions. The highest ambition of this sable sportsman was to kill a "green-head" duck. Finding that he was never allowed to kill one when with me, he stole the gun one Sunday and marched down to the creek, accompanied by the whole "drumshot" gang of the plantation. Reasoning, like many other poor fellows, that a sound shot, but arriving at an erroneous conclusion, Pete put in two charges of powder and shot in each barrel, thinking that, if one charge would kill, two would do the work much better. Finding a large flock of "green-heads" trusting to the sanctity of the day, and quacking as they never do quack except on Sundays, aided by the shelter of a water-fence, Pete crept to within twenty yards of the devoted birds. Resting his gun on the fence and taking careful aim, he

Onro-Cincinnati, Feb. 19th.—Score of a pigeon match shot at Ross Lake Park, between H. J. Koch and Ferd. Witte, both of this city; 15 singles; ground traps; 26 yards rise; and 10 doubles from plunge traps at the usual distance; each party,

MICHIGAN ARCHERS.—Battle Creek, Mich., Feb. 6th.—The following record may not be uninteresting to some brothers.

archers. It is a practice score of ten days—Jan. 21st to Jan. 31st inclusive. Sunday excluded—made by six men's man, Mr. Frank H. Duncan, of the Battle Creek Archers, at a distance of thirty yards. Its chief interest lies in its particularity—

Total number rounds.....	101
Grand average.....	233 93-101
Average of best six consecutive rounds.....	254
Best 30 arrows (consecutive).....	254
Best 45 arrows.....	286
Best 30 arrows.....	246
Arrow to end in 101 rounds.....	229
Arrow to arrow in 101 rounds.....	74 (approx.)
Total number arrows.....	3,030
Distance walked.....	244 miles.
Time occupied.....	40 hours (approx.)

BATTLE CREEK ARCHERS.—Battle Creek, Mich., Feb. 19th.—The cold weather forces us to shoot indoors, and consequently at short range. The following score, made by Frank H. Duncan, of the Battle Creek Archers, Feb. 9th, may excite to emulation some beginner in the winking sport.

Eight successive rounds of 30 arrows each at 30 yards; average to each round, 250; highest 90 arrows, 754; highest 45 arrows, 412; highest 30 arrows, 256. In the eight rounds he made 165 golds, 70 reds and 5 blues, but once making below 21 in an end. He made no blacks, whites nor misses. He four times made 12 golds in succession. N. A. O.

OHIO—Toledo, Jan. 31st.—Match between John Wilkinson, of the North Side Archery Club, of Chicago, and Dean V. R. Manley, of the Toledo Archery Club; number of arrows, 90; distance, 40 yards—

	1st 30.	2nd 30.	3rd 30.	Total.
John Wilkinson.....	23	170	30	104
Dean V. R. Manley.....	40	69	29	138

THE DES MOINES TOXOPHILES.—Des Moines, Ia., Feb. 5th.—As "experience meetings," or more properly retrospective views on the past year of archery, seem to be having a boom, I feel that the West should not withhold its mite. The Toxophilites of Des Moines have had a very pleasant and satisfactory season, and can look back on the past and note with commendable pride their progress as a club since their organization, two years ago. Our scores by the lady members at the Columbia Round have ranged from 300 points down. No long ranges were attempted last season by the club. Our weather is too cold and the winds too boisterous for successful practice of archery during winter months; and only in a few instances since last October has any archer been rash enough to attempt it. I am aware of the fact that it is early to speak of the grand national tournament to be held at Buffalo, N. Y., four or five days of next July. It seems to the writer that as everybody is entitled (or ought to be) to a fortnightly vacation in midsummer, would it not be a good idea for all who desire to go to lay their plans and husband their resources with this in view. There certainly cannot be a more delightful trip—by land or water—to this beautiful city by the lake to enjoy a few days' recreation in one of her many handsome parks and almost in earshot of one of nature's grandest and most wondrous works—Niagara Falls.

TAC HUSSEY.
A COMANCHE BOW.—Boston, Feb. 4th.—I have read with interest the articles on the different woods for bows, and beg leave to offer a mite on the subject. Years ago I was in the habit of making bows of red cedar, which our people preferred an inquiry about. I found the material excellent, so far as elasticity was concerned, but brittle, and apt to warp. Pursuing my experiments, I glued a strip of leather along the back to counteract the latter fault, and, pouring oil over the wood, lighted it, and scorched it, I found it toughened the wood considerably, and for years never used any other bow. I have in my possession a Comanche bow, the description of which may be interesting:—

Length, 3 feet 3 inches; width, 2 inches; thickness, 1 inch; made of spruce, and backed with a mat of buffalo sinew, glued so firmly as to defy both weather and time. The string was also of sinew, and after I broke it, I never could get another that would stand the strain. A sheaf of arrows accompanied it, that were also a curiosity in their way. The shafts were in two parts. (1.) A 30-inch wood apparently, with a woody outside. (2.) A short piece of wood inserted in the end, of an equal diameter as the shaft, to which the stone and head was fastened with sinew resembling catgut, while both joints and feathers (hawk) were fastened with thin bands of the same. The whole was about thirty-three inches in length; and I have seen a strong man draw that three-foot bow in his head, and send an arrow over a fence one hundred and sixty-three yards away! I could not do it though.

J. P. TRAE.
ANOTHER INDIAN BOW.—Putnam, Conn., Jan. 31st.—Fifty years ago I saw a very old bow and arrows at Yarmouth, Mass. It was said to have been used by an Indian who lived near Plymouth at the time of our forefathers. It was worn very smooth. Around the middle was a fine braid, which was filled up with a kind of glue. It looked as if it had seen a deal of service. There were two arrows with it. I thought they were made of walnut. They seemed to be heavy, were pointed with sharp stone, and other end feathered for about seven inches. The arrows seemed to be stained with blood. I carefully measured the bow, and afterwards made one as near it as I could, and it was the best bow I ever saw. I killed considerable game with it. I pointed my arrows with glass, and many a woodchuck I have tumbled over. I once recollect shooting two partridges from a tree that our dog Bose had tied. Game of all kinds was abundant there, especially about the Plymouth woods. G. F. W.

HORSMAN'S ARROWS.—New York, Feb. 21st.—Editor Forest and Stream.—My attention has been called to a communication from Mr. L. L. Pedinghaus which appeared in a recent issue of your paper. While Mr. Pedinghaus' remarks were, to some extent, complimentary to my make of arrows, they had a tendency to mislead the public mind in regard to what I am now manufacturing. I quote from his letter:—

Horsman's arrows are excellent; we have used more by him than any other maker. But when he makes the pile to fit the steel perfectly, so they will not bend whenever they strike anything hard, and thus the feathers on the shaft without cutting creases in the steel, then they will be the par excellence of arrows.

While these remarks may apply to last year's goods, they do a great injustice to the "par excellence of arrows" which I am now making. The "pile" I now use is bored from solid metal. The "steel" is made from the same English steel as used by Aldred, of London (which I think I need not say is the pile perfectly).

No longer cut "creases" or grooves in the "steel," but glue the feathers on the outside surface. All my footed arrows are feathered with peacock feathers.

I have spared no expense to make my arrows absolutely perfect, and have succeeded, as the following letter will prove.

E. I. HORSMAN.

CRAWFORDSVILLE, Ind., Feb. 24.

DEAR SIR:—On Thursday, the 23rd of January, after the meeting of the National Association at Chicago adjourned, several of

the distinguished archers present—among whom were Mr. Henry O. Garrow, Mr. W. B. D. Gray and others of the Highland Park Society; Mr. Tac Hussy, of the Des Moines Toxophilites; Mr. E. P. Chester, of the Commodus Archers, of Lawrence, Kan.; Mr. E. T. Church, of the Charlotte Archers, of Charlotte, Mich.; Mr. Walter Burnham, of the Chicago Archers, and several others, including your humble servant—went down to the Exposition Building, and shot twenty-four arrows at sixty yards. Every man used your new footed, peacock-feathered arrows, and without exception pronounced them to be the best arrows ever shot.

You have achieved perfection, and American archers ought to rise up and thank you. Since I came home I have shot them with Maurice, and he pronounces them simply "superb."

Sincerely yours, WILL H. THOMPSON.

Cricket.

AVERAGES FOR 1879.

YOUNG AMERICA CLUB OF PHILADELPHIA.

This crack club of the United States played in all, twenty-five matches, thirteen first eleven and twelve second eleven. Of the first, nine were won, three lost and one drawn. The second eleven won eight and lost four. The first eleven visited Hoboken to play the St. Georges of New York, and Baltimore to contest with the organization of that city. The second eleven played three matches and won them all with ease. It is unquestionably the strongest second eleven in America. The following summary of matches and averages, both batting and bowling gives the record of the season:—

FIRST ELEVEN MATCHES.

Date and Place.	Sides.	First Innings.	Second Innings.	Total.
May 10—Ardmore.	Merion.....124	—	—	124
Lost by 31 runs.	Young America.....93	—	—	93
May 17—Nictown.	Philadelphia.....59	—	—	59
Won by 106 runs.	Young America.....163	—	—	163
May 30, June 1—	Germanstown.....77	57	135	205
Nictown.....	Young America.....128	—	—	128
Won by 70 runs.	Young America.....128	—	—	128
June 4, 5—Hoboken.	St. George's.....43	76	119	195
St. George's.....	Young America.....176	—	—	176
Won by an innings and 56 runs.	Young America.....176	—	—	176
June 7—Haverford.	Dorian.....77	146	—	146
Won by 7 wickets.	Young America.....119	23	—	142
June 14—Baltimore.	Baltimore.....49	23	—	72
Won by 8 wickets.	Young America.....49	—	—	49
June 21—W. Phila.	Belmont.....113	—	—	113
Won by 17 runs.	Young America.....102	—	—	102
June 28—Chestnut Hill.	Chestnut Hill.....56	74	130	204
Won by an innings and 5 runs.	Young America.....130	—	—	130
July 3—Nictown.	Baltimore.....62	100	—	162
Won by 156 runs.	Young America.....218	—	—	218
July 21—Nictown.	Staten Island.....59	—	—	59
Won by 109 runs.	Young America.....172	—	—	172
Aug. 27, 28—Stenton.	Hamilton.....74	50	—	124
Lost by 10 wickets.	Young America.....28	—	—	28
Sept. 13—Stenton.	Philadelphia.....—	—	—	—
Drawn.	Young America.....315	—	—	315
Oct. 17, 18, 20—Stenton.	Dale's Team.....171	—	—	171
Lost by an innings and 60 runs.	Young America.....61	—	—	61

SECOND ELEVEN MATCHES.

Date and Place.	Sides.	First Innings.	Second Innings.	Total.
May 3—Nictown.	Germanstown (24).....72	95	167	262
Lost by 71 runs.	Young America.....35	61	—	61
May 10—W. Phila.	Belmont (24).....56	85	123	198
Lost by 2 wickets.	Young America.....35	63	—	63
May 31—Ardmore.	Merion (24).....127	68	—	127
Won by an innings.	Young America.....242	—	—	242
June 7—Chestnut Hill.	Philadelphia (24).....74	114	—	114
Won by 74 runs.	Young America.....118	—	—	118
June 14—Nictown.	Germanstown (24).....46	77	—	123
Won by 83 runs.	Young America.....74	—	—	74
June 28—Nictown.	Wakenfield (1st).....71	137	—	137

OUR POLICY.—We have recently received from many prominent cricketers, both in the United States and Canada, the warmest congratulations in regard to our policy in editing the cricket columns of this paper. We must confess that these encomiums have made us feel more than repaid for our care. Let us, however, at this time define clearly what our policy really is.—It is not only the correct publishing of a certain number of scores and averages, but it also aims to advance the popularity of our game of games. It is an undisputed fact that the large and widely scattered circulation of the FOREST AND STREAM has done more in one year to unearth the lovers of cricket in this country than was ever done before. We, therefore, often leave the cricketers behind us, believing that Philadelphia and New York, and other like places, are full able to care for themselves, and go out into the by-ways where the broomstick stumps and string-hands bats still hold undisputed sway. To their enthusiastic owners the cookies of our heart are warm, and we would now say a word in their behalf. If an annual match could be arranged by the American Cricketers' Association, the proceeds of which to be devoted for the encouragement of the game in charity schools and out-of-the-way places in the United States, where proper cricketers material otherwise would never find its way, it would do a vast amount of good, and at least practically attempt to do what is talked about a great deal—"the advancement of American cricket."

Yachting and Canoeing.

Meeting of the National Yachting Association, March 1st, at the St. Denis Hotel, Broadway and Tenth street, at 8 P. M.

THE BUSINESS OF THE N. Y. A.

ON the national coat of arms of Belgium is the legend, "L'union fait la force." In all great enterprises, whether of a commercial nature or otherwise, combined action has been found conducive to the best results. That a powerful and influential body should move more rapidly to the goal of ripe development and complete success than the isolated and limited efforts of individuals stands to reason. It is for promoting the common good that clubs are formed in which the individual loses his identity in a class, and similarly it will be for the benefit of all that the clubs again should combine in a general association of national range and strength, in which the preponderance of local influences should be sunk with a view to the production of grand results beyond the accomplishment of clubs in their capacity as detached bodies. Almost all varieties of sport have come to recognize the force of these remarks, and have banded together for the attainment of general prosperity and the welfare of those devoted to a specialty. The time has now arrived for yachtsmen to follow suit and take up the wake marked by the jockey clubs, base-ball leagues, athletic organizations and boating fraternities. The growth of yachting in America has, owing to the great extent of our coast, the distance between ports, and the different local influences at work, as a matter of course, been surrounded and affected to a more or less extent by a great variety of customs and practices. It is desirable to unify, codify, purify these, and settle down to sound and rational principles of government, so that in the future the sport may more rapidly attain the promising spread in popularity and healthy expansion upon permanent foundations which have of late years opened up to it.

It is for this reason that FOREST AND STREAM was the first to advocate the institution of a central national com-

blination of yacht clubs, and we are glad to see that our influence seems to have been sufficiently powerful to bring about the convocation wished for, and our thanks are due to several minor contemporaries for the ready manner in which they have fallen into line and taken their cue from these columns. We will now point out, in a general way, in what directions the National Yachting Association, soon to assemble, can exert its labors to the best advantage. Among the many subjects it should lend its consideration to, we deem the following the most essential, premising that as liberal a course of deliberations as consistent with beneficial and tangible effects will bring about the most far-reaching and acceptable results:—

1. The adoption of a strong constitution and by-laws, under which the National Association is to have life and act.
2. The appointment of a committee of appeal, to whom questions at issue and disputes of local or club authorities and judges can be referred for final adjudication; in short, an executive committee, with defined duties and jurisdiction.
3. A uniform system of classification for the entire country, so that the single and intelligible denomination of class may be adhered to from Maine to Texas.
4. A rule of measurement, the same for all yachts without exception, in which the five axioms enumerated in our last issue shall be strictly observed.
5. A common set of sailing rules, defining the rule of the road and the amenities of yacht to yacht, whether cruising or racing.
6. All matters relating to ballast must be settled according to an accepted plan. If shifting ballast cannot yet be abolished, the manner of shifting, the kind of ballast permissible, and the classes of yachts which are at liberty to avail themselves of shifting, should be fixed upon. Riggering out dead or alive ballast on planks or by means of rope spans should be discontinued, and the evil limited as far as possible, if deemed advisable, by offering the inducement of more liberal prize money to races sailed with fixed ballast. An expression should also be given concerning dumping or spilling ballast after the starting gun.
7. The limitation of crews to the number necessary to handle racing yachts, so as to do away with live ballast and excessive rigs.

8. The definition of a Corinthian and a professional for obvious reasons.
9. Time allowance adapted to various measurements and lengths of courses.
10. Races to be held by the association.
11. The publication of an "Annual," containing list of members, clubs participating, yachts and their details, registration of private colors, addresses, officers and other matter.
12. Allowances to different rigs in mixed rig races.
13. Annual dues to give practical effect to the operations of the Association.
14. Fines and penalties to be administered.
15. Club-house and museum or repository of models, donations and library.
16. Distinguishing colors of the Association, their shape and size.
17. A systematic course of lectures and entertainments conducive to the spread of a taste and knowledge of the science and art of the sport, which may be printed in the "Annual" for the benefit of those unable to attend.
18. Rules for compiling records of races to be observed by Secretaries of clubs belonging to the Association.
19. Cruising with prizes for seamanship, as explained in FOREST AND STREAM, Feb. 5th.
20. The general interchange of opinion and courtesy, the rights and civilities to be extended to yachts of the Association visiting strange waters, and a yearly banquet when the treasury is full.
21. Application to Congress for the simplification of the Revenue and Treasury regulations governing yachts.

We suggest the appointment of one or more committees to consider the more important and pressing of the subjects, and the forming over to a special committee of all that is left, with instructions to report upon what additional legislation they deem desirable to incorporate in the Association rules, besides devising the means to accomplish what they recommend. This will avoid confusion and delay at the meeting.

In conclusion, we remind the delegates to the first general meeting, which is to take place March 1st, as announced, that many conflicting interests and ideas will be represented, and that it will be the duty of each delegate to overlook some extent personal preferences and hobbies, so that out of chaos order may be made. In the end all are to be congratulated and will benefit alike from united action, and even though some influence may unduly preponderate at the outset through oversight or want of experience in common, everything is sure to find its proper level in time, and what cannot be accomplished to-day can be finished or rectified to-morrow.

Delegates unable to attend in person should be represented by proxy. Nothing will be final at the first meeting, until placed before each club for consideration and approval. The meeting stands in no wise committed to anything which has appeared in these columns, but is free to act according to its own choice upon all points.

ACTION OF THE S. F. Y. C.

BELOW we append a copy of a letter received by the Secretary of the Committee on National Yachting Association from the S. F. Y. C., and which is here published as an example of the approval the formation of a National Association meets with on the Pacific Coast, and which illustrates the liberal spirit of the San Francisco yachtsmen, and their generous and willing support of a movement initiated for the advancement of all parts of the country:—

SAN FRANCISCO, Cal., Feb. 14th.
MR. JOHN VICK, Secretary National Yachting Association.
DEAR SIR:—I have the honor to inform you that the following delegates have been appointed by the San Francisco Yacht Club to attend to matters connected with the National Association:—
Rex-Commodore R. L. Ogden (yawl *Mist*), at present at No. 51 Broad street, New York; J. Clem Uhler (yawl *Emerald*), at present at Lebanon, Pa.; and Charles G. Yale (yawl *Elm*), 203 Sansome street, San Francisco.

The San Francisco Yacht Club will heartily endorse any movement calculated to promote the yachting interests of America on their P. open footing. Although at a great distance from the yachting center of the United States, and to a certain extent, isolated, we feel none the less interested in all which shall promote the general welfare of our favorite pastime.

The yachtsman's road between New York waters and those of

San Francisco Bay, although the length of two oceans, has already been traversed by one of your yachts, and we hope some day to return the visit in a vessel of Pacific build.

Although debarred, from force of circumstances, from social companionship with the fraternity in the East, we hope, through the Association, to see established a community of interests which shall result in closer relationship in each of the next two different parts of the country. So far as we can assist in accomplishing this object in any way, the Association can command us.

Let me add that you can assure a hearty welcome to all members of clubs belonging to the Association who may at any time come to our shores. If they will be kind enough to make themselves known as yachtsmen to any of us, they will be made free of the club-house, and may, on any of our yachts, "wet their jackets" with the spray of the Pacific.

Respectfully,

CHAS. G. YALE,
Sec'y San Francisco Yacht Club.

YACHTING NEWS.

ROYAL NOVA SCOTIA YACHT SQUADRON.—The annual meeting was held on Thursday, Feb. 12th, Lieut. E. R. Hussey, R.E., Vice-Commodore, presiding. The annual report of the Committee of Management was read by the Hon. Secretary. It congratulates the Squadron on the large increase of membership and of yachts, the fleet now numbering thirty-eight vessels. The Squadron has justly earned the title of "the racing club of America," bestowed upon it by *Parsons* and *McDonough* in each of the past two years sailed more races than any other club in America. In 1878 the number of races sailed was ten, with forty-eight starters; and in 1879 the number rose to eleven, with sixty-eight entries and fifty-eight starters. The number of prizes grew in proportion, nineteen being won in 1878 to sixteen in 1879. Of these prizes twelve were given by the Squadron, one by *Mayor* Tobin, two by the officers R. A. and R. E., who repeated their handsome gifts of 1878, and the remainder by the officers of the Squadron. The prizes were won as follows:—

Yachts.	Rig.	Owner.	Tons.	1st.	2d.
<i>Psyché</i>	Sloop.....	W. H. Brookfield.....	7	3	1
<i>Hebe</i>	Sloop.....	E. B. Brookfield.....	5	2	1
<i>Mutua</i>	Sloop.....	Lieut. Dunlop.....	5	2	1
<i>Seafoam</i>	Schooner.....	Lieut. C. O. Carter.....	27	1	1
<i>Liberty</i>	Sloop.....	H. W. Weston.....	5	1	1
<i>Lily</i>	Sloop.....	W. H. Weston.....	5	1	1
<i>Una</i>	Sloop.....	F. S. West.....	3	1	1
<i>Volante</i>	Schooner.....	Rudolph.....	9	1	1

For the coming season His Honor Lieutenant-Governor Archibald has kindly offered a cup to be sailed for.

The Hon. Treasurer's accounts were, as usual, referred to the Committee of Management for audit, and the discussion of questions proceeded with. A resolution proposed by the Hon. Secretary to alter the present rule of measurement was voted on by yacht owners, and negatively, whereupon the mover gave notice of a resolution, to be brought forward at a later general meeting, providing that in the case of yachts with immersed keels the whole length of immersion shall be added to the mean length on keel and between the perpendiculars for the calculation of the tonnage. The rule governing flying starts was amended by enacting that in all class races no time shall be allowed for difference of start, and that in open races the difference of time at the start up to five minutes shall be allowed for in calculating the time allowance, but any yacht crossing the line after the expiration of five minutes from the starting gun shall be disqualified. A motion to allow yachts to enter in unit races at three-fifths their real tonnage, and to give and receive time allowance on their reduced rate, was, after being amended by allowing yachts to enter at four-fifths their real tonnage, carried on a division. Mr. F. S. West gave notice that at the next meeting he would move that this be rescinded. The Hon. Secretary gave notice that he would move a resolution defining the status of the officer of the day in charge of a race. The election of officers and committees for the current year was then proceeded with by ballot, with the exception of the Commodore, the result being: Commodore, His Excellency the Marquis of Lorne, K.T., G.O.M.G.; Governor-General of Canada; Vice-Commodore, Lieut. E. R. Hussey, R.E.; Rear-Commodore, F. C. Sumichrast; Hon. Secretary, F. C. Sumichrast; Assistant Secretary and Hon. Treasurer, W. H. Troup. Committee of Management: The Flag Officers and Hon. Treasurer, *ex officio*; J. Cronan, S. A. White, J. W. Stairs, J. E. Butler, F. S. West. Sailing Committee: The Flag Officers and Hon. Treasurer, *ex officio*; F. M. Passon, Lieut. C. O. Carter, R. E. W. H. Brookfield, W. Hedley, L. J. Second, Messrs. J. E. Butler, W. L. Lake. The first meeting of the season of 1880 will be announced at the general meeting in April.

THREE MORE CUTTERS.—The little iron schooner *Ida*, 18ft. waterline, which has cruised several thousand miles along the coast, has been bought by Mr. Fagan, of this city, and will be altered into a cutter. She may be termed a white-hull model of large displacement and deep draft, having 6ft. beam and 2ft. 6in. water. We have also just finished the design of a 4-tonner for a Canadian gentleman, and an 8-tonner is to be laid down immediately for New York owners.

OUR YACHT BUILDERS.—Scarcely a week has passed of late but that it has been our agreeable task to call attention to some fresh accession to the advertisements of yacht-builders and others in the trade. The support given to the yachting community by the *Journal* is the best proof of its extended and very rapidly growing circulation. And well they may take advantage of our lead, for this journal enjoys a virtual monopoly of the yachting interests of America, having driven all rival flags from the sea. Our circulation among the yachting community is larger than that of all other publications combined, taken several times over, and we have among this one class alone more readers than the entire circulation of many a minor contemporary devoted to the stable or to the retailing of "longshoreman's yarns." We deem it but a duty of the *Journal* to warn them against the false representations of sundry little sheets which do not hesitate to seek trade at the expense of truth. There is a wide margin between the brazen perversion in an advertisement of "a million and a half copies issued to date" and the reality of a petty circulation of not much over five hundred, if that many. Sheets which have to resort to such palpable falsehood to secure even the recognition of their existence cannot offer much inducement to advertisers, and of no value to readers. The *Journal* is well attention to the card Mr. Samuel Ayres, yacht-builder, who has the best facilities in his shop for any class of work. Besides a number of small craft he has about completed a 45ft. sloop, of which we may give further particulars.

ITEMS FROM THE PACIFIC.—The sloop *Nelle*, Mr. Hyde P. Bowie has been in commission all winter in San Francisco. A new 35-ft. launch will be built in the same city, and the *Fletcher* is receiving a new cabin. The schooner *Pearl*, built by Captain Turner, is for sale; likewise the *Sappho*, the *Yacht*, of Benicia, and the

sloop *Etta*, and Stone's new craft. It is also reported that the schooner *J. C. Conus* has been sold to C. O'Connor and may be put into the trade. Mr. McDonough, her former owner, will build a new craft, also the owner of the *Sappho*.

TWO BIG CRAFT.—Mr. Sears, of Boston, formerly owner of *Weymouth*, is having a new schooner built down East, said to be 110 ft. long; and Sam Pine, of Greenpoint, has contracted to build a steam yacht, 75ft. by Mr. Hinds, of Brooklyn; engines, 100hp, by Rowland, of Norwalk, Conn.

SEAWARD'S YACHT CLUB.—The annual dinner of the club at Delmonico's last Friday was participated in by a number of guests representing other yachting clubs. The best of feelings prevailed, and at 10 o'clock, when all hands seemed away for home, the hospitality of the club was fully unreciprocated.

YACHT FOR SALE.—In another column will be found the notice of a 25-ft. keel yacht for sale. She is just the craft for extended cruising and can be purchased at a great bargain, fully fitted.

CRUISING IN CHALDER BAY.—It was blowing fresh, very fresh, from north, and as we got abreast of Meagher's Beach Light, old Milleet, foremast Jack, nodded, in the direction of a "smoker," traveling rapidly toward the yacht. There was time to shorten sail, but we were not wise in time, fancying that she would drag what she could not carry. With cabin doors wide open to the cockpit, we old mainsail, foresail, jib and mizzen on her, let her take it. Where! the next second we started the *Nymph* in deep water, and carried her ballast low down. Where would your famed shallow mallow be now? Ugh! unpleasant to think of. I can't swim a stroke, and if I were good as Wobb I should have no chance with this lee-going tide. All right, skipper; keep her on her course again. And so we beat up under headsail and mizzen and crawl into Portcell Cove. . . .

A word about the yacht. She measures 32ft. over all, 29ft. on the water-line; has a beam of 9ft. 6in. and draws 5ft. 6in. She is rigged with a pole mainsail, a standing bowsprit and a gaff mizzen; makes the right thing, I know: so does her owner, Mr. E. B. Brookfield, who is cruising in these waters with the *Ida*, the cruise whereof I write, that a running topmast, running bowsprit and big mizzen would be improvements. She is too open also for outside work. Her vast cockpit is uncommonly comfortable in landlocked waters; but, oh, ye gods and little fishes, isn't it a mistake in open water! There were days, and worse, nights, in the course of our wanderings when every man aboard heartily wished she were flush-decked, and that she shall be when she again ventures out along the coast. But her cabin is pleasant and snug, and in fine weather the discomfort of the cockpit is not apparent, while its convenience is undoubted, the punt fitting in nicely and being out of the way when sailing. . . . Cape George was our furthest point on the way; no wind to speak of, but luckily a strong tide, which swept us up to the breakwater under the cape, where, as the tide turned, we deemed it prudent to remain. It was very pretty country all round, and quite enjoyable. A similar experience on the Tuesday; wind a shade stronger and fair, and we glided past Pictou Harbor, intending to go aside where the island and house look like a bird's nest, but which would have involved a pull against wind and tide, and there was too much of the latter and not enough of the former to risk the boat. We rested content with speaking the pilot-boat and sending a telegram to our friends at home to apprise them of our safe progress. The same pilot-boat, by the way, had had a lesson about yachts and their speed which I fancy her crew will not soon forget. The famous *America*, with that wondrous pace of her's improved by the substitution of lead for iron, a good part of the precious metal being on her keel, was cruising in these waters, blowing very fresh, and her owner, yielding to the wishes of his guests, determined to make for Pictou Harbor. Up went the signal for a pilot, and shortly afterward the pilot schooner tackled to fetch the yacht. Somehow, instead of ranging just ahead of her, the Pictou fellows found themselves about a mile astern, nor was it till the *America* was hove to that they were able to fetch up to her. "Sure you're a steamer," says Pilot Macdonald, as he stepped on board, to the General. And it took a little while to convince him that the *Ida* of 1851 was not a tea-kettle.—*Boats Cruise in Hunt's Magazine*.

TIME CARBON LOCKER.—To Preserve Colors: Nothing will remove mildew. Scrub with Castile soap, sprinkle with diluted lime water, and scrub with a stiff brush. Use water to treat all new sails as follows, and thereby prevent mildew: Dissolve in 14 gallons of water 1 pound of finely powdered alum, and 2 ounces of finely powdered sugar of lead; when thoroughly dissolved, steep the sail to be prepared so that the solution will permeate every part of the same for ten hours. After drying, it will be ready for use. For heavy canvases, increase the amount of alum and sugar of lead. *Yachting Journal* for Mending Hair: Rubber: Fuse together equal parts of gutta-percha and genuine asphaltum; apply hot to the seams or joint, using a moderate pressure. *Strength of Yachts:* The sheathing strength of a 1-inch rivet, passing through the hull plates, is ten tons; and the double sheathing strength of a 1-inch rivet, passing through three plates, is eighteen tons. This will be, for a 1-inch rivet, single shear, eighteen tons; double shear, thirty-two tons. *Plating of Steamers:* In the steamship *Queen*, 400 feet long, the garboards are 1-inch thick, sides 1 inch, with the strakes at beam-ends doubled.

MARINE ART IN WATER COLORS.

Editor Forest and Stream:—

To the Academy of Design, where the annual exhibition of water color paintings is at present to be seen, I went, not long ago, specially to view the marine display. Not with the eyes of a professional critic or artist, but simply with a yachtsman's eyes, and I wrote them up (or down) with a yachtsman's pen, a pen which will prove, I trust, to be as quick to recognize artistic excellence and technical merit as ready to notice faults.

In the North Room we saw:

No. 25, "Morning on the Shore," by C. M. Dewey, which is a pleasing picture, well drawn, well painted, natural and dewy, as it should be in the morning. Nos. 35 and 58 are scenes on the Rhine and Scheldt, by Samuel Colman. Not up to his high-water mark. Water and sails indicate a calm; smoke and pennant call for a breeze—"a most amusing paradox." Dutch sails always seem to be ridiculously disproportionate to size of boats,

Remind me of story about W. R. Travers. Travers hired Mr. Hatch's yacht for the season, with crew aboard. Found that the steward couldn't make a cocktail, Mr. H. having run a temperance yacht, and "never carried any whiskey, sir." "Well," said Mr. T., "you'll have to learn to make it. We sometimes carry more sail than whiskey, and sometimes we carry more whiskey than sail; but we never hoist more than we can carry of either one. Don't be afraid."

No. 66, by Fred S. Cozzens, represents a paddle-wheel coasting steamer making her way at half stroke through floating ice, in a snow storm. Excepting a slight oddness of shading on the starboard bow, she appears to me to look remarkably like a coasting steamer making her way through floating ice in a snow storm.

No. 75 is a characteristic sketch of DeHaas, showing a rough-looking schooner on the starboard tack under three lower sails. Execution bold and toney, but the drawing of fore and mainsail leaches is decidedly faulty. Sorry to see none of A. Cary Smith's here. His outlines are always right.

There is a lovely bit of surf and shore in this room by Wm. Huston (103), but "skied" outrageously by the committee. Near it hangs a quiet but effective twilight scene on the Thames, by Geo. Hitchcock. Reminds one of some of Dickens' descriptions of the London docks. The old dismantled hulks are wonderfully hulky, but their shrouless masts are vilely stepped.

The best marine in the room, by all odds, is No. 113, by H. P. Smith, and as good as any marine in water color need be. Water, rock, cloud, gull, yacht, each is *suí generis*. "A group of boats," by Reinhart, (135) is nicely drawn and boldly treated, but rather unnatural in coloring, which however is somewhat harmonized by distance.

Passing into the East Room the first picture to deserve attention is 143, by Henry Farrer. I never saw the moon rise on the East River, but doubtless it is as Mr. F. has depicted it. Nor did I ever see a bark with masts in one single stick from keel to trucks, and I don't believe he did either. But the picture is a pretty one, though not so pleasing as Nos. 268 and 316 by the same artist.

No. 224, "The Wreck," by R. P. Bloodgood, although unpretentious, is enough to show that the artist can draw a boat and color it. The effect is not marred, moreover, by the natural stock properties in the way of anchors, buoys, cables and other articles, which would certainly have been long since appropriated by the regulation wrecker in the red shirt, who is generally to be observed busily engaged in doing nothing whatever, while ple-

thoric seagulls hover fearlessly around. For having spared us these the artist has our thanks.

No. 242 is a very creditable contribution by D. M. Bunker, representing a small oyster-sloop moored to the meadow bank at low tide. The sail lacks texture, to be sure, but the drawing and foreshortening are so correct that it is scarcely worth mentioning. It is evidently an outdoor study and not mere studio work, barring, perhaps, the mainsheet traveler, which should run over instead of under the tiller—an arrangement which is very unhandy in tacking and dangerous in jibing.

In the West Room we find another gem of Huston's in the "Wreck on Long Island Coast," and not far off another wreck-piece, called "The Morning After" (293, by J. Thorpe). A better name would have been "The Following Year," for the wreck is altogether too weatherbeaten for one but twelve hours old. But it is well handled, and the clouds are better than usual.

"David and Goliath" (297, by E. W. McDowell)—a small tug towing a large vessel, with a very black hawser, by the way—is stiff and amateurish, but above the average in tone and coloring, though these will not redeem defective drawing. I shall look for something better next year.

"Morning off the Isle of Shoals" is the name of a carefully studied composition by Mr. Cozzens (No. 323), and no less carefully painted. A group of sloops and schooners in the doldrums, the sails idly flapping to and fro, with reef-points slatting, booms creaking, and the sun struggling through the yellow mist—all these are not easy to transfer to paper. But Mr. Cozzens has done this with rare success. His work shows much improvement over last year's; but as he is quite a young artist that is to be expected. His craft are as a rule correctly drawn, sparred and rigged. His weakness may lie in his shading, but his sails are canvases and his ships float in water, not in paint.

No. 346, by F. A. Silva, covers a good deal of paper, and a closer view discloses much inaccuracy, for which there can be no excuse even on the ground of "artistic effect," notably in the elevation of the schooner's foremast, the peak of which, though dropped, is already higher than the springstay, while the port main shrouds are over the forward cross-tree at the masthead. Like those of Mr. Farrer, his masts and topmasts seem to be all of a piece. In his "Connecticut Shore" (210) the same inattention to trifling essentials is observable in the unnatural hanging of the lazy jacks of the inevitable big sloops in the middle ground, which otherwise is very good.

Mr. Symington's "Morning on the Lake" (363) is good though rather hard and cold, but much better than his "Young Fisherman" in the North Room. Neither can be strictly called marines, however, though boats and water enter into both.

A pretty drawing by F. H. Smith, in the corridor, called "Noon, Seabright," is worth more than a glance, but is scarcely a marine, so I pass on to No. 683, "A Bit of South Cove, N. J.," which one may recognize from afar off as the work of Henry Muhrmann, the "impressionist." The "impression" it produced on me was—well, it looks like a lot of boats, bridges and buildings as they might appear after an earthquake, dynamite explosion and tidal wave which, having subsided, has left things pretty badly mixed. But perhaps the paints got mixed, or it is hung side up. However, it is artistic and bold, very bold.

A triple "Study of Boats," 648, by G. Reynolds, deserves a better place than a dark corner. They are very cleverly drawn and painted.

No. 684 is a breezy drawing (in chalk and crayon, I think) by S. G. W. Benjamin, full of marine spirit and correct, except perhaps the position of sloop's mast.

"Homeward Bound" (709), by J. G. Brown, in black and white, is the best example of its kind in the building. Strongly, clear and true to reality. The old boatman is a boatman, and his boat is fairly flying over the waves, though I observe with regret that she carries a leeward lead.

The Black and White Room contains but few drawings that can properly be mentioned here. But Nos. 374 and 381, by Farrer, will serve as examples of an all too common error—namely, that of leading shrouds too far forward on the side of the vessel which is away from the spectator. The result is that the vessel and her rigging give out other the lie, whereas the artist ought to father it.

Trout fishermen will thank me for calling their attention to a little Adirondack gem, 257, by John Johnson. J. L. K.

—It looks as if the ground hog prediction might be fulfilled after all. The old prophecy on which this faith is founded has a much more substantial basis of authenticity than the spurious rhymes of Mother Shipton, and is as follows:—

Yf ye wudd-chukkie seer hys shaddo inn ye mnne,
Six wokes of wynter sholl have begunne;
Yf ye wudd-chukkie hys shaddow doe not see,
Six wokes of sprynge like weather thayr shall be.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	.50	1 " 1.00	2 " 1.50	3 " 2.00
Amount to remit us, 3 .75	6 " \$1.50	1 " \$3.00	2 " \$5.50	3 " \$8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00

Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any of the following Articles:

Jordan's Manual of Vertebrates. A copy of FOREST AND STREAM for one year. A three-piece double-ferule, lancewood tip, full mounted, polished Bass, Trout or Bald Rod.	Coues' Field Ornithology. One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks. One Russia-leather Fly-book, and one dozen assorted Flies.	One five-foot lancewood Bow, Horn Tips, and one dozen 25-inch Arrows. One pair Club Skates.
---	---	--

To any Person sending us, before July, 1880, sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:

Two copies of Forest and Stream for One Year. A four-piece, double ferule, guides and reel-band, hollow, built, extra tip, full mounted, Bail or Brass Rod. One 3-piece do. Fly Rod.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Coues' Key to North American Birds.	One Gen'l's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickled-plated Club Skates. One Parlor Air-Gun.
--	--	---

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

FOR SALE.

250,000 BROOK TROUT FRY.
At reasonable rates. Address for prices to
J. B. & F. N. EDDY,
Hampden, Cattaraugus County, N. Y.

FOR SALE AT A BARGAIN—Two Nichols and
Lefever breech-loading shot guns; one 10
bore, 32-inch, 10 lbs.; the other 10 bore, 28-inch, 9
lbs. Each cost \$150 each; will be
sold for \$100 each; both laminated steel, rebounding
hammers, pistol grip, pad fore-and, and absolutely new. Address B. E. this office.

For Sale.

RICE LAKE, CANADA—WILD RICE

For sowing in fields, lakes and fish ponds.
Delicious for desserts. Very scarce this season.
One bushel to twenty-five, 25 per bushel. Next season or-
ders before August 1st, 1880, honored one to four
hundred bushels. Address CHAS. GILCHREST,
Overseer of Fisheries, Port Hope, Ontario, Can.
Feb 22-21.

WILD RICE SEED for sale, \$3 00
per bushel. Supply limited.
R. VALENTINE, Jameville, Wis.

For Sale.

FINE BRECH-LOADER FOR SALE—P.

Webley & Son, maker. Pistol grip, top ac-
tion, rebounding locks, extension fore-and, 10-
bore, 32-inch. Every improvement on the gun; eleg-
antly finished; used but very little; perfect
order; lowest price, \$55. Address "WILEY'S"

The Kennel.

Neversink Lodge Kennels.

The following celebrated Dogs are in the stock.

Dogs.

St. Bernard dog "Marco", rough coated, two years old; a magnificent animal—Rev. J. Cumming Macdonald's stock—second prizes Hanover Show and Rochester show.

New Foundland dog "Keeper", four years old; first prize Westminster Kennel Show, 1879.

Pointer dog, "Croxtoth", liver and white; one and a half year old; out of Lord Seton's renowned stock—one of the handsomest pointers in the United States. Second prize in the American International Show.

Blue Belton setter, "Decimal Dash", eighteen months old; sired by Lievelly's celebrated "Dash"—a magnificent stock dog—never exhibited.

Irish setter, "Rover II", pure red, son of Macdonald's champion "Rover", never exhibited.

English setter, "Ranger II", a pure bred Lavacok, son of Macdonald's celebrated "Ranger". His get won first at Hanover and Paris shows, and second at Puppy Stakes in Eastern Field Trials 1879.

Stud fee, \$25.00.

For Sale.

The get of the following thoroughbred

St. Bernard "Brantels", rough coated, out of Prince Solm's celebrated stock; a magnificent bitch, in whelp to "Marco", 1st prize in Hanover and Rochester show.

Pointer "Queen", liver and white, 1st Westminster Kennel Show 1878, in whelp to "Croxtoth", 2nd New York Show 1878.

Pointer "John", liver and white, out of "Queen" and "Sancho".

Blue Belton setter "Silk".

Irish setter "Moya", out of Col. Hilliard's "Palmston", in whelp to "Rover II".

English setter "Donna", white and lemon.

Pups can be secured by an early application. Bred in whelp for sale pointers and setters of minor quality, but of good thoroughbred stock; full pedigrees. Also, several puppies of champion "Queen" by champion "Sancho".

Having engaged the services of Macdonald's renowned field trial breaker I am prepared to book orders for thoroughly broken dogs, deliverable autumn, 1880. Particulars will be furnished on application to A. E. GODEFREY, Gaynard, Orange Co., N. Y.

CHAMPION LIGHT WEIGHT POINTER "RUSH."

"In the Stud."

Rush is lemon and white, and winner at New York, Boston, Philadelphia, St. Louis and Louisville Shows. He is an excellent field dog; fine nose, fast, stylish and staunch. For full particulars, pedigree and full qualities address

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line

Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed.
If equaled, in the abundance and great variety of
fish contained.
BROOK TROUT abound in the streams,
and the famous AMERICAN GRAYLING is found
only in those waters.
The TROUT season begins May 1 and ends Sept. 1.
The GRAYLING season opens June 1 and ends
Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCA-
LONGE, also abound in large numbers in the
many lakes and lakelike of this territory.
The sportsman can readily send trophies of his
skill to his friends or "club" at home, as ice for
packing fish can be had at many points.
For FURTHER FACTS WRITE FOR THE scenery
of the North Woods and Lakes is very beautiful;
the air is pure, dry and bracing. The climate
is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.
The hotel accommodations are good, far surpass-
ing the average in this country. Connecting di-
rect to the finest of fishing.
During the season Round Trip Excursion Tick-
ets will be sold at low rates, and attractive train
facilities offered to Tourists and Sportsmen.
Boats, Guides and Fishing Tackle Carried Free of
charge.

It is unusual to make sportsmen feel "at home"
and some of the finest waterfowl and upland
shooting sections in the country. Connecting di-
rect for Chincoteague, Cobb's Island, and points
on the Potomac at City Point, James River, Cur-
rituck, Florida and the mountainous country of
Virginia, Tennessee, etc. Norfolk steamers sail
Tuesday, Thursday, and Saturday. Lewes, Del.,
Monday and Thursday, at 2 P.M. Full informa-
tion given at office, 107 Greenwich Street, New
York.

GUNPOWDER.
DUPONT'S
RIFLE, SPORTING AND BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.
Nos. 1 (coarse) to 8 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING."
FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, AND ELASTIC POWDERS of all sizes and descriptions. Special grades for export. Carriage, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

J. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unchanged in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 25, 25, and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 25, and 5 lb. and cans of 5 lb. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF.

MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

The Attractions of Arkansas.

I HAVE entertained the idea of writing down, for the benefit of my fellow sportsmen, something about the game and fish of this region. The imaginary person I represent, belonging as he does to one of the oldest, most respectable, and aristocratic families of the State, respectable for their virtues, eminent for their abilities, and venerable for their antiquity, naturally takes great delight in anything that redounds to the past, present, or prospective glory of the Commonwealth. He takes great pleasure, therefore, in giving you some account of the game and fish resources of his native heath, which, though gradually diminishing from indiscriminate slaughter and no protection, are still more considerable than in any other part of the Union with which he is acquainted.

Since the publication of "Travels in Arkansas" by the English naturalist, Nuttall, and the humorous sketches of Col. T. B. Thorpe and "Peter Whetstone"—long since out of print—no extended account of Arkansas has appeared in general circulation. The limits of one letter would hardly be sufficient for this purpose, even if the interest would justify. To be brief, then, the game of this State may be divided into two classes, the same as the population; local and migratory—old citizens and carpet-baggers; no offense toward that worthy class of our fellow-citizens is here intended. The migratory portion of the game may be subdivided into such as come to stay all winter, and such as merely pass us on their long spring and fall journey. To the former subdivision belong many of the ducks, to the latter the geese. Most of our local game is semi-migratory, that is, it moves about and changes location accordingly as the mast hits or misses, always keeping an eye to the main chance, passing from upland to bottomland, from open woods to canebrake, as the food supply requires. It always happens when either deer, bear, or turkey are unusually plenty in any locality, the others will not be far away. Your correspondent is exceptionally fortunate in living on the border land between the low and hill country, from whence it is easy to go to either, and where the opportunities for accurately locating the best hunting grounds are unusually good. But more of this under the appropriate head. Arkansas has an area of more than 50,000 square miles and a population of less than half a million—less than ten to the square mile, rather unequally distributed in town and

country—the towns far outnumbering the country districts in the matter of growth. The State, for the purposes of a brief account of its game resources, may be divided into four sections: the Northeast, Northwest, Southwest, and Southeast, each possessing distinctive characteristics.

The northeast portion of the State extends southward to White River and westward to Black River, and borders on the State of Missouri and the Mississippi River. It is, as a rule, low and swampy, possessing heavy timber and heavy canebrakes. The "sunk lands" constitute a considerable portion of this part of the State. It is traversed by innumerable sloughs and has many lagoons and cypress swamps. There is a range of low hills running through it, known as Crowley's Ridge. The general direction of the ridge is from northwest to southeast; it terminates at Helena on the Mississippi River. The principal rivers other than those named, are St. Francis, L'Aquila—pronounced "Langell"—Bayou de View, and Cache, all sluggish, chocolate-colored streams, mere ribbons in dry weather, immense floods when up. These streams and their tributaries, as well as the lakes, or lagoons, are well stocked with black bass, pickerel, all sorts of perch, and such coarse fish as drum, buffalo, and cat *ad nauseum*. As might be inferred, this vast region is alive with game, and owing to the inaccessibility of a portion of it in the winter and spring months, serves as a sort of a game preserve. It is more sparsely populated than other portions of the State. Deer and bear abound, and it is not long since elk were known to exist in the vicinity of the sunk lands. There are large areas of fertile land, elevated just above the regions of eternal wet, and these are the sites of such settlements as have been made. By the use of light boats nearly the whole of this region might be traversed. That it is capable of yielding the finest of sport may readily be inferred. In the late fall and winter months countless millions of ducks and geese literally cover the waters. The far-famed Swan Lake is situated in this section. In the western part of this region the proportion of dry land grows greater. Here deer, bear, and turkeys are found in their native simplicity. Tradition tells of wild turkeys breeding with the tame fowl of the barnyard. Parallel with, and a few miles from Black River, flows Cache, through a veritable sportsman's paradise. On its banks, in days past, lived a sportsman, known to fame and your columns as "Guyon." Numerous tales illustrating his prowess as a deer-slayer, are still to be heard. Said an old friend of his, sadly, "He, Guyon, must be growin' old; he don't hunt nothin' but birds, and don't keep no dogs but these settin' pointers."

I had almost forgotten to mention Rob White. He is here with his cheering note, not in great abundance, but sufficient for royal sport. Snipe and plover are plentiful at times, but don't tarry long. There are a great many fur-bearing animals throughout the entire region. Swans and geese tarry awhile—sometimes all winter. A full and detailed description of this quarter of the State would make my letter too long.

Northwest Arkansas extends from Black River westward to the Indian Territory. Immediately on emerging from Black River bottom, going west, one comes to upland, then hills, then mountains. The surface is diversified, however, and there is some prairie. Water fowl are not so abundant as in the part first described. The country is better settled. There is, however, a broad expanse of waste land, unbroken wilderness, and of course abundance of game. In seasons when the mast fails in the lowlands and "hits" in the hills, deer, bears and turkeys are found here without trouble. The streams are rapid and clear, and fishing bears a closer resemblance to sport. Black bass, jack salmon, striped bass, pickerel and all sorts of perch are found. There being more small grains raised than in other parts of the State, quail are consequently more abundant.

Southwest Arkansas lies between the Arkansas River and the Louisiana line, extending far enough east to embrace the town of Hot Springs. It is mountainous in places, but has more water courses than the part just described. In the matter of game it resembles the Northwest, but has also some water fowl. The fishing is reported not so good as in other parts of the State. There are, however, localities that form an exception to the general rule.

The southeast part of the State lies south and east of Little Rock, having Lower White River for its northern boundary. It abounds in quail, turkeys, deer, bear, and has a fair supply of water fowl. There are immense canebrakes and some extensive prairies. On the latter is to be found as good prairie chicken shooting as the United States affords. The area, however, is limited to the two counties of Prairie and Arkansas. Here are also sand-hill cranes. Plover and snipe in countless millions in their season visit these prairies. In the river bottoms close to these prairies are immense canebrakes, where deer and bear may be found. I had almost said—undiminished numbers. At Crockett's Bluff, on the Little White River, right in the very midst of all these good things, lives that prince of Arkansas sportsmen and good fellows, Col. Bob Crockett, not a rough and burly back-

woodsman, but a "sure-enough" gentleman sportsman, of good address and polished manners. Col. Bob is a man of fine ability, full of anecdote, well informed, and wields a facile pen. He delights in field sports and engages in them without stint when his professional engagements do not interfere. If he could be drawn out he could "a tale unfold" about Arkansas that would cause all other tales to seek obscurity. He was here in the halcyon days "before the war."

It will be observed that in speaking of fish I have not said "trout" once. This is because the speckled trout (*S. fontinalis*), is not found in Arkansas, nor is the ruffal grouse. The absence of these daintiest of the dainty among fishes and birds, is a sad deprivation to one reared in their haunts, and it takes a very long time—how long I do not know—to conquer the "hankering" after them. Not even the eloquent and persuasive article of your able Kentucky correspondent has been sufficient to render me forgetful of my first love of the mountain stream, or to make me altogether satisfied with the black bass. While I am sincere in my admiration of the game qualities of the bass, still from putting together the rod to the "grace after meat," I can see nothing to entitle him to the misapplied name of trout. Then the surroundings of their respective dwelling places, the clearness of the water, the purity of the air, the grandeur of the scenery—there is no comparison. The truth is, that in the South and a great part of the West, the black bass is "the best Bill can do," and that is the whole story. But here the venerable Governor, whom I represent, feels called upon by his regard for his name and fame and the traditions of his family to reassert himself; He wishes it to be distinctly understood that what his native State may lack in quality, she makes up, and more too, in the quantity of the game she possesses. Besides the black bass, anyhow, is no "slouch," and the wild turkey no "fool hen" to be killed by any novice just because he wants to. To an unstinted abundance of game, which by judicious legislation is capable of being fostered and preserved, or even increased to any desirable extent, may be added a winter climate as near perfect as any in the Union—just cold enough to lay insects and reptiles, and warm enough to make it pleasant to be out all day long. Surely these afford a most potent reason for the most abounding thankfulness. The stranger sportsman will find in Arkansas a generous old-fashioned hospitality, which while it "vaunteth not itself," is none the less sincere. In a word, genuine old Virginia hospitality, with the reservation, the wind, the "old Virginian," left out. The people of the State are Southern in their manners and habits of thought; but they have imbibed much of that "broad spirit of freedom," and possess in an eminent degree the "game" qualities attributed by Irving to the frontiersmen of the West. Plain and unassuming, but hearty and cordial—rough, it may be in exterior, but sound at heart; there are no people among whom the sportsman, whatever his party or creed, or if he have no party or creed, will feel more at home. YELL.

Jacksonport, Ark.

REEL FOOT LAKE.

Musing upon the shore I said,
"Oh, lake and waters blue,
"Tis time to shoot the gray-green-head,
And the sad wild goose, too."
—AFTER SOME FELLOW WHO WAS AFTER TESTNYKOV.

HAVING been prevented by the prevalence of yellow fever in Memphis, and the consequent quarantine restrictions, from going to Grand Prairie, Ark., after pintado grouse, for two seasons in succession, we determined to try Reel Foot Lake this season for ducks. Consequently on election day, after having duly deposited our votes, we boarded the north-bound train on the Mobile and Ohio Railroad. Our party consisted of Col. W. L. Walter C. Gray F., Forney G., and the chronicler of these records.

It was a clear, still day, cool and bracing; a good road and splendid cars, and plunging through receding woodlands bright and glorious with the many tints of autumnal foliage; through cotton fields, white with the dewy stalk; through corn fields, sere and naked; through blue cuts and red cuts; over treaches, and across long reaches of swamp lands, we reached Union City, Tenn., at nightfall. Here we left the train, and having dispatched ahead, found a good square meal awaiting us. From this point the lake is distant eighteen miles, according to the reckoning of the inhabitants—by our count, at least twenty-five.

When it was noon struck with a liverny man to be on hand at daylight with a conveyance to take us to the lake. We consumed the time after supper, until 11 o'clock, loading shells; and it is the next thing to a miracle that the roof was not blown off the Planters' or whatever is the name of the hotel. However, we got through safely; and the Colonel and I, having been assigned to the same room and one bed, rolled in together; and just as we had got comfortably straightened out, down came the two-dollar bedstead—a most fearful and irreparable wreck. I am satisfied they thought below

stairs—from the way they came pouring up—that we had hurled a keg of powder. Nothing was left us but to go to another room, where we found two beds, but one with a man in it. So we laid our four hundred pounds of humanity on the mattress as gently as possible, and were entering the borders of dreamland, when pop went a shot! This necessitated a little movement to get out of the snagged place, when rattle-bang went two or three more. We got up and put them in again, but it was time wasted; for, as soon as we would lie down, out they would pop again. In the meantime the man in the other bed was sleeping as soundly as old Rip Van Winkle in Catskill Mountains, and doing some as admirable snoring as one ever listened to. Now, W. intimated, next morning, that I indulged in some "appropriate remarks," and wanted to throw my boots against the door to wake the fellow; but I deny the allegation and denounce the allegator.

The floor was so taken up by a stove, our impedimenta, etc., both under the bed and all around, that we could not find space enough to put down our bed—and as there was no help for it—we had to lie there, doubled up into the shape of a couple of figure 8's, until dawn. I have slept on the battlement, surrounded by the dead and the dying; I have slept in the snow; I have slept on the golden earth, with a winter's rain beating down upon me; I have slept on the top of a staked and ridged fence; I have slept in the saddle; I have slept in a bug-infested bed, in a hut in the pine hills, but nowhere and with no surroundings have I passed a more miserable night. And still the fellow in the other bed snored on. "Not poppy, nor hyson, nor mandegora, nor all the drowsy syrups in the world, could ever medicine him into a sounder sleep," than was on him then.

At the first peep of day we were up, and, having hauled the rest of the party out of bed, we breakfasted by lamplight, deposited ourselves and baggage in a two-horse so-called spring-wagon, and rolled out for the lake. The road runs past some splendid farms, and through some magnificently timbered woodlands; indeed, I never saw finer timber anywhere. Some of the poplars and pin-oaks were simply immense. The face of the country is, at first, gently undulating; but as you approach the lake it becomes more broken. Further on, deep valleys and steep ridges take the places of the gentle rises and flat valleys. At length, on the summit of one of these hills, five or six miles from the lake, the bushes begin to give to our ears the sound of the far-away skishish; plainly the gunshots could be heard; and how instantly and vividly it brought back the recollection of those dreadful days, when those rambling discharges foretold the terrible shock of battle that swept over the bloody fields at the first Manassas, at Shiloh, at Perryville, at Murfreesboro', at Chickamauga, at Franklin,

"When the ranks were rolled in vapor, and the winds were laid with sound."

It was precisely like a skirmish; the continuous and irregular popping, with an occasional big gun that sounded like a piece of artillery. "Hurry up, driver, they are at it below there." Whaling his animated equine skeletons, he urged them into a trot on the down grade portions of the road. Ascending a long rise, we came suddenly in view of the valley in which the lake lies. Although we could not see the water from the summit of the hill, on account of the intervening timber, we could trace its limits by the dead trunks of trees that stand in it. It is a scene of surpassing beauty. From the point where we stood, by a precipitous break-off, the valley lay before and beneath us, level as the ocean, billowed with the foliage of the gigantic forest; golden and bloody red with the dyes of autumn, and glorified by the sunlight of a perfect autumn day, it stretched far away, and seemingly swept on to the Missouri hills beyond the river. From that valley came the incessant boom of guns, and far beyond we could mark the smoke curling up from the chimney of some steamboat that plowed the bosom of the Father of Waters.

"Boys," said W., "if I don't kill a duck, I am repaid for my trip. Long we stood there, taking in the beauties of the scene before us. It is the generally received belief, that all the valley slid down to its present level at the time the lake was formed. This is all sheer bosh. The water covers but a small portion of the valley, and the timber in the lake is totally different from that on the adjacent shores. It is almost entirely cypress, showing that the land now submerged was, since the time the present forest has grown up, lower than that which is uncovered, as cypress always grows in very low and marshy ground. It would have been a matter of utter impossibility for such a slide to have occurred without affecting the perpendicular of some of the trees, as the valley is two or three hundred feet below the level of the adjacent hills. However, we will leave this to the geologist.

Descending by a steep and rugged road we reached the level below, and rattling on a mile or more reached our hotel—"the Algonquin." The house is a two-story affair. The parlor is situated right on the bank of a small bayou that runs parallel with the lake for some distance. A sort of pontoon bridge, made of floating logs, stretches across the bayou, opposite the house. The house itself is a rude structure, built in a sort of lacustrine style of architecture, set up above high-water, on large posts or sections of logs. Its holding capacity seems unlimited, as there were about thirty couples in the room, besides the family—consisting of the old man and his wife, several sons, and the inevitable pretty girl. Now, I did not intend saying a word about Walter and the Colonel trying to pass themselves as unmarried men, because their wives might get hold of this paper, and I don't want them to lose their hair; but they would stick to it, that I *cussed* the sleeping fellow at Union City. Hence this revelation; and when their better halves get hold of it, *hine ille tachymus*.

The fun came in the shape of wild pork and ducks—stewed ducks, baked ducks, baked ducks, roasted ducks, smothered ducks and shooed ducks—and the space below the dining-room was festooned with strings and bunches of ducks. Having hastily worried down some of the afore-said grub, Gray and I stepped—or rather crawled—into a dug-out and paddled down the bayou. On the way down we met our friend Tom C., and Capt. S., of Hickman, Ky., who had just killed a few ducks and a few fish, whence they had gone—guns, shells and all, in some twelve foot water. By a streak of good luck they had

managed to fish out their guns. These dug-outs are the shabiest concerns, in the way of water craft, that I ever attempted to navigate. They are not much bigger than an old-fashioned plantation brent; say, you have to part your hair in the middle to keep them level—and the least bobble, slap over they go, bottom upward. I would as soon attempt to shoot from the back of a kicking mule as from one of them. At a fish-house on the shore, we procured a guide and struck out for a point about three miles off. Pulling through a narrow ditch we entered the lake. The first view is dismal in the extreme, the water is covered with a brownish green scum, the floating logs and brush are everywhere, and the soft ooze in the bottom, stalks of the lotus or water lily with their umbrella-shaped leaves, dead and sere, lift themselves above the brown scum, weird and ghost-like, and rustle and shiver with every passing breeze. On either hand, far as the eye can reach, stand the branchless trunks of gigantic cypresses, bleached and worn by the sunshine and tempests of nearly seventy years. It is a scene of utter desolation and impresses you at once with the conviction that some sudden and awful convulsion of nature hollowed out this dreary waste of water. Long ago—as long as the Good Book allots the years of the life of man—these blanched and fire-scarred trunks lifted their heads, green with their feathery foliage, to the light and air of Heaven. The shock of the earthquake came, the ground was upheaved near the river and depressed further back. The water in Reel Foot Creek, find its outlet, gradually filled the vast depression. The trees died, and their bleached skeletons stand and will stand until the next generation shall have passed away, silent witnesses of that fearful convulsion. The lake is some eighteen or twenty miles long, and from one to four miles wide. Where we were the water was at no place over twenty feet deep. Towards the centre of the lake the water is clear and of a slightly bluish color, the reflection of the cloudless skies above.

**** Off from out it leaps
The my darter with its glittering scales,
Who dwells in the water, and its gassy scales,
While chance some scattered water-lily sails
Down where the shallower wave still tells its babbling tales."

The water-lily, or lotus, grows in all the shallows. It has a seed-pod shaped some what like an inverted wasp's nest; containing from one to two dozen nuts, very much like a small acorn and as hard as iron. After these nuts the ducks come, according to some; others swear a duck never eats them. A friend, who has shot them for years, told me he had opened a great many of all kinds, and had never found a single quonpin in one of them. But whether they eat them or not, the ducks come there in myriads. The navigation of this lake in a dug-out is not the easiest thing in the world. Thousands of stumps stand just far enough below the surface of the water, invisible in the moss, to strike your boat. They are as slick as ice, and if you are not careful you may run on one, and, slipping off your duck, will find yourself in submerged logs and "limber jims" add to the difficulties.

Pulling through all these in our tottering craft, we reached the point and took our stations. The ducks are kept stirred up by the constant firing, and fly from one part of the lake to another, usually going over some projecting point of land; or they fly in and out of the numerous arms that project far inland. We had taken our positions in some high places, and the city was a great mass of ducks and small bunches were flying by. Presently a magnificent mallard, gorgeous in green and purple, with incurved wings, swooped right down on Gray. Picking up his gun he cut away at him with both barrels, and Mr. Mallard, without a feather touched, sought other quarters. "If I was over there I would feel like taking that paddle to you." "I'll be hanged if I can see how I missed him," said he. "Carefully I held on her and pulled trigger. With a loud quack, quack, she screamed upward, and I cut away at her with another barrel; she continued to mount and I stood looking at her in much astonishment. "Shall I come over with the paddle?" asked Gray. Then the evening fight having commenced, they began coming thick and fast. Mallards, gadwalls, wigwags, blue-bills, and pintails, came in great numbers. Finally we sailed, and the day was nearly spent when we got the hang of it, and began to knock them right and left. I wish some of those "holding-on-theory" fellows had been there. Night coming on, we pulled for the other shore. Going back, we came near going to the bottom. Contrary to the advice of our guide, we pulled hard for the land, as we were fearfully hungry; while going at a very fast rate, the punt squatted and we tumbled up such a way that the bow of the concern was lifted high above water, and a perfect torrent came pouring in astern. G. had presence of mind enough to fall flat in the bottom of the dug-out and thus shift his weight forward. It was as dark as Erebus, and when our guides came up, we were about a quarter of an inch above water at the stern. The least motion and down we would go. He tried in vain to get us off, and was about to give up, when Col. W. and Capt. S. came along, and after a long trial got us afloat.

It is needless to add that we went slow from thence to land. We were terribly tired when we reached the house, and our shoulders were considerably hammered. We found that the rest of our party were ahead in the number of ducks bagged, albeit Gray and I considered them all mere tyros and ourselves veterans. Some of them declared that we took them a good deal easier. "But," they used to say, "here he comes," and another to say "there he goes," and that a cannon-ball was nowhere in point of speed to one of them.

We were up betimes next morning and pulled for a point farther up the lake. It had turned warm during the night, and we did not see many ducks until late in the afternoon. I had killed eight fine mallards and a few small ducks from a point, and Gray several more. When we pulled up to the mouth of an arm and had some shooting at long range, the ducks flying very high. I shot from a log behind a muskrat bed, and G. from an immense hollow stump, but it took a good many shots to get a duck. After sunset we started to row back, and had not left our places a hundred yards when the ducks commenced pouring in to us. Now if we had remained where we had been all afternoon we would have had more. Our boatman could have picked them up as fast as they fell, and we could have done much better shooting from a solid footing than

from a tottering dug-out. The fact is, I could shoot only those that came in square from the front, for whenever I fired over the side I was certain the canoe was going over. Well, we made it hot for them until dark-ness put a stop to our shooting. I never saw anything come in faster, except a rascal to a chimney on a summer's eve. "The air was dark with pinions," and rustle of wings and loud splashing as they dropped into the water was continuous. The yonquaps were very high and as thick as the hairs on a dog's back, and it was very dark, so we got only a small per cent. of those shot down. It was late at night when we got back and our boys were just on the point of organizing a party to go in search of us. But potatoes were not fired and hungry, and the brown eyes of the pretty girl opened in astonishment as fish and potatoes, and ducks and pork disappeared beneath the folds of Gray's capacious canvas, and I was not far behind, if I was handicapped with a headache. When we went back to our room we found Walter, Forney and the Colonel piled in bed, boots, hats and all, and as sound asleep as the fellow at Union City, and we were not long in following suit.

The next day Gray and I went back to the point we had occupied the day before; the others went down the lake. Col. W. killed a goose—the only one bagged. For easy rowing we went further from shore, where the water was free from vegetation. It was quite clear, and of an average depth of six feet. I noticed some very singular water tortoise. They were about the size of a common "highland terrapin," iridescent, with an orange-colored bottom shell. Prodigious numbers of coots kept flapping up before us, but we did not molest them as we were after larger deer. The day was warm and clear, the ducks flying very high. We did not get many shots until late in the afternoon. While I was on my log my friend Major Val. Y., of Columbus, Miss., came by with a darky paddler and his miscellaneous cargo of a common "highland terrapin," iridescent, with an orange-colored bottom shell. The ducks did not come so thickly as on the previous evening to the roost, and commenced coming in later, so we did not have half the shooting we anticipated. One old mallard came along by Gray. He cut away at him, dropping him about ten feet, but he climbed up again. Then he gave him the other barrel, letting him down about the same distance as before. Passing me I gave it to him right and left. The first shot dropped him about ten feet; the next put him in the water. When he hit the water he struck out like a champion rower. Then I slapped in two more shells and opened fire on him again. The first shot turned him bottom upwards, but he righted and struck out again; the next shot knocked him clear out of the water, but he still kept going, and the boatman, becoming unmanageable, broke shot, rushed in and knocked him in the head with a paddle. He was just a little the hardest duck to kill I ever saw. "He wore a charmed life that would not yield"—except to a paddle. We shot until pitch dark, the flashes from our guns leaping like tongues of flame far up into the air. Pulling back through the darkness the black shadows of the trees along shore made the surface of the water appear to slope landwards, and we could scarcely divest himself of the idea that he was going down the river into the plane.

This was our last day, and our bag was far from being a good one. But, comrades, whose fault was it? For did we not shoot until our shoulders were battered black and blue? But we had lots of fun, and learned enough of the lake to do better next time. And, friend Forney, if you did not eat enough fish and duck and ketchup whose fault was it? Not the landlady's, I am sure. The sportsmen of the lake were mostly from Natchezville. We found them genial, courteous, whole-souled gentlemen, and the writer is indebted to Mr. Nicholson for a large bunch of mallards that helped out his bag amazingly. Capt. Atwell Johnston and the Messrs. Young, from Columbus, Miss., and Mr. Vass, from Mobile, were encamped opposite Carpenter's with a splendid outfit. They killed a great many mallards. Toward the close of the evening we pulled to the big hill going up from the valley. We had to take out everything, even the seals, and carry them to the top, and the teams barely made it with the empty wagon. When we got to the summit we were dry with rage and extreme toil, breathless and faint, and nothing stronger than lake-water within seventeen miles of us, while W. lay on the ground fresh as a bridegroom, having kindly consented to watch the horses while we carried the mud to the top. After a weary drive we reached Union City in time for a late dinner. That night, not wishing to have any more bedsteads mashed, the landlord separated the Colonel and I, and the last thing I heard from him was yelling for "Bob" to bring some water. They put me in the bridal chamber, and all night long I was trying vainly to shoot from a tottering dug-out—with a gun that would never fire, the myriads of ducks, and the deafening, noisy and noiseless pinions the boundless air of mysterious dreamland.

"For a mallard I've waded the marsh,
And I'll catch each bird in the lake, oh!
Mine is not the luck
To obtain thee, O duck,
Or to dream thee, O drake, like a draco." GUYON.

Corinth, Miss.

Natural History.

A CORRECTION.—In our remarks on Uniform Nomenclature in our last issue we were made the victim of an unfortunate printer's error, which we desire to correct without loss of time. Referring to the action of the committee on Nomenclature of the Michigan Sportsman's Association, we are made to say: "The views expressed by the committee are founded on the right idea, that of absolutely local names, and substituting the names which belong to the various species and by which they are known to biologists," etc. The sentence, as printed, means, so far as it means anything, the very reverse of what we intended to say. We wrote: "The views expressed by the committee are founded on the right idea, that of abolishing local names," etc. Our readers will see the importance of making this correction.

REMINISCENCES OF MY PET CROW.

COOPER'S POINT, Feb. 2d.

Editor Forest and Stream:—

Having read many very interesting accounts of the sagacity of birds in the FOREST AND STREAM, I am induced to present the following recollections: One afternoon while pushing the marsh I noticed what I at first supposed to be a king rail. As I approached the bird I discovered it to be a young crow crippled in its port wing. I took it in the skiff and soon forgot the circumstance. On my return to the boat-house, however, the crow reminded me I had left something. I took it home, and with careful nursing he soon became strong and fat, and correspondingly saucy. I was at the time in the wholesale dry goods business at Front and Market streets, Philadelphia, and lived just over the water at Cooper's Point. I invariably crossed the river in a small sailing skiff (barring stormy weather) in the morning, returning in the evening. "Jim" always accompanied me, and his favorite roost was either at the masthead or on my weather shoulder. A long sand-bar running north from Smith's Island divides the eastern and western channels, terminating in a bulkhead from the Jersey shore, leaving a small swash passage between, difficult to navigate. Jim had the soundings down fine, and always gave orders to tack ship in pure crow language when we were approaching the bottom. On one occasion he was resting on my shoulder and watching me intently. The tide being low and the wind ahead I was obliged to make short tacks and maneuver skillfully. Presently a "header" put the skiff ashore on her center-board. In an instant the bird struck me in the face with both wings, and with a shrill derisive cry flew away, evidently disgusted. For a long time he refused to go with me on the water, until one afternoon I was racing with a larger boat, and just as I passed her Jim settled down on my shoulder with delighted approval. We were friends after that. He never allowed me to let the sail shake along the luff for an instant without making a fuss about it, and understood when it was time to jibe over, and always let me know it. His great delight was to see the skiff driven through the heavy seas, though half drowned by the spray. He never seemed quite to understand the utility of reef nettles. When a flock of crows would pass over us Jim generally left me for a few minutes to indulge in the innocent amusement of making them "git." He was the fleetest bird I ever saw and the most graceful. He was game all the time, but one day he tried hard to chase him into the skiff. He tried hard to make me believe he was unwell, but somehow I never understood it that way. He never entirely got over the mortification, and it was his last battle. He was extremely fond of me, and as I write he seems to look at me approvingly from his perch, though his eyes are glassy now. I was always under the impression that Jim was (the Jersey) man or born, not so much from his superior intelligence as the peculiar sand-bar color of his wing tips. Delaware passed a law giving five cents per head for every crow killed. I presume on account of his color. As he could not well be put in the stocks or dogged, the next best thing was to cut his head off. The crows naturally sought protection in early morning flights across the water to Jersey, where they fed sumptuously all day, returning home in the late twilight to roost. Jim had great powers of discrimination, and could tell a foreign crow at long range, and on such he made terrific slaughter, but the State never "divided." As we have champions for almost everything in these latter days, I would like some time to give you an account of our champion "boat upsetter." A large and handsomely devised silver medal attests his prowess.

R. G. W.

NOTES FROM CORRESPONDENTS.—Our friend, C. M. C., of New City, to whose capture of a king rail with a frog in its throat we referred recently, has sent us a note in regard to the matter giving fuller particulars of the circumstances. He says: The frog was about four inches long when extended, and about one inch in breadth, and was alive when drawn from the bird after it was shot. About one-half an inch of the feet protruded from the bill of the rail.... A. F. de N., notifies us of the shooting in the "Pines," of New Jersey, of a ruffed grouse of a bright golden color, and asks if it is not a *rara avis*. We presume that it is a blanché specimen, or partial albino, though normally colored birds of this species are sometimes very pale.

DRUMMING OF RUFFED GROUSE AT NIGHT IN WINTER.—I am an ardent admirer of the FOREST AND STREAM, and have been recently re-reading the back numbers, in which I have noticed many articles on the ruffed grouse, but have not seen anything like the following: While en route on Negro Mountain, Somerset Co., Pa., Dec. 1st, 1879, I heard ruffed grouse drumming at the hour of midnight. The moon was shining brightly; the ground covered with three inches of snow, and mercury about 12 degs. above zero. This is something very unusual, is it not?

G. H.

Grouse often drum during the night in spring and fall, but we have never known of their doing so in the winter. The case you cite is an exceptional one, we imagine.

BIRDS AND MAMMALS INTRODUCED INTO NEW ZEALAND.

WE have been favored by the following epitome of a paper on the above subject by H. M. Brower, Hon. Sec. Wanganui Acclimatisation Society, New Zealand, lately read (January 15th) at the Linnean Society of London.

The author refers to Dr. Buller's volume on the New Zealand Birds, and says that too soon for the total disappearance of many highly interesting forms is to be deplored, to wit, the Kakapo (*Strapops habroptilus*). New Zealand quail (*Colinus Novae Zealandiae*), bell bird (*Anthornis melanura*), etc.

But to import English birds to supply their places is not without its difficulties. Native enemies are to be contended with: for example, the New Zealand owl (*Ninox*), it is asserted, wages destructive warfare against the smaller finches and songbirds. Of 100 diamond sparrows liberated on the Island of Kawan by Sir George Grey, few escaped the ravages of this little owl; and on the Hon. Mr. Stafford's grounds at Wellington, a number of insectivorous birds being let loose, these soon attracted a host of owls to the serious discomfiture of the former.

Notwithstanding, finches of various sorts have succeeded, and undoubtedly increased to such an extent that there is now no danger of their extermination. The skylark may even be found enlivening some districts with its cheerful, varied music. Of other species acclimatized there may be mentioned starling, thrush, blackbird, chaffinch, goldfinch, yellowhammer, house and hedge sparrow, Indian mynah, ringdove, golden plover, jay, Australian and Tasmanian magpies, Muscovy duck, black and white swans, Californian, Australian, and Madagascar quails, partridges, pintails, grouse, and pheasants of various sorts, etc.

The pheasant now abounds, and even shooting licenses are granted. Fifteen birds were turned out in the Wanganui district in 1896. These have now spread all over the province, even far inland. Two friends of the author lately bagged seventy in one day, and this by plain, open shooting.

The China pheasant (*P. torquatus*) is most numerous, although the common sort (*P. colchicus*) is less so. It is a singular circumstance that on the occurrence of a tremor of the ground from an earthquake the cock pheasants set up a continuous crow either of fear or defiance.

In the North Island the partridge (*Perdix cinerea*) thrives less vigorously than in the South Island; Canterbury especially, with its cereal crops, affording perhaps a better feeding and breeding ground. The red-legged partridge (*Ardeotis rufa*) is plentiful in the Bangitike district of the Wellington province, but it appears to remain where first located. Blackbirds and thrushes, and the Indian mynah (*Acridotheres ginginianus*) are seen in large numbers in the Nelson province.

Of mammals imported by the societies the following are the chief:—The red, the fallow, the Sambar, and the California deer, Angora goat, hare, kangaroo, wallabies, and opossums. A considerable number of deer and fallow deer was lately made by Mr. Larkworthy, and of twenty-eight which arrived in safety eight were turned out in the Waikato, and ten in the Wanganui district. On the hills in the neighborhood of Nelson large herds of wild deer are reported to have been seen. Fallow deer set free near Richmond have increased. The author here appeals to the proprietors of English deer-parks for some of these foxes annually killed when it is desirable to procure fat deer venison.

Hares have multiplied almost too rapidly, and one peculiar feature is that the female in New Zealand produces six or seven instead of two or three at a birth. Already the southern farmers complain of the hare's destructive qualities, and culling clubs meet bi-weekly during the season. Thus from a former paucity of mammalian life in New Zealand there begins a tendency to the contrary, and possibly ere long its fauna will have approximated to that of the Mother Country.—J. MURIE, in *Land and Water*.

THE HEARING OF FISH.—We printed, some time ago, some observations on the voice of fish, contributed to *Nature* by an East Indian correspondent, which seemed to indicate that these animals were capable at least of producing vocal sounds; and recently Mr. Hugh Owen has sent to *Land and Water* some interesting observations and conclusions of his, which we are sure will be perused with pleasure by most of our readers. He says:—

It is exceedingly doubtful if fish possess the faculty of hearing in the ordinary sense of the term. Mr. Buckland has accurately described the nature of the sensation they do possess, as vibration. There cannot be a doubt that fish have no possible conception of either vicinity, direction, or distance of the vibratory disturbances they receive. A distant vibration disturbs a shoal of fish as much as a near one; and fish feeding eagerly at the bait will be alarmed and dispersed by the beat of a steam vessel a mile off. All the stories of fish coming to be fed at the sound of a horn or of a whistle are, of course, fables. Such sounds made in the air will not communicate vibrations to the fish beneath the surface of the water. They assemble only because they see a figure, and are accustomed to be fed upon such occasions.

In trying some experiments on this point, I kept carefully out of sight, and simultaneously discharged the two barrels of a double gun on the bank of a pool, the surface of which swarmed with small fry. Not one was alarmed. I merely dropped the breech of the gun sharply on the ground, and the whole surface of the water was in an instant flashing with the fish frightened at the vibration caused by the shock. Any experiment on the hearing of fishes, made in the sight of them, must necessarily be imperfect and illusory. On the other hand, the heavy footstep of a fisherman on the bank will as effectually scare the shoal as any sound.

The perfect use of the auditory organs of the higher mammals is just as much the effect of education as is that of the tongue, the hand, or the eye. A young child has no apprehension of the direction of any sound until practice has instructed the brain. A puppy, on hearing a call or a whistle, will look all round in perfect ignorance whence the sound proceeds. When the education of the organ is perfected by experience, the direction and esti-

mate of distance is arrived at with unconscious rapidity. Wild animals are sensitive to the direction and distance of sounds. The *all* is not much disturbed by a distant noise, and only *goes* slowly away in a contrary direction. This power of estimating distance and direction cannot be possessed by *fish*, to which the element in which they live only communicates a universal vibration, equal in all directions.

The auditory apparatus of fish is curiously analogous to that of mammals in some particulars, especially in the ear-bones already mentioned. The otolith is probably the analogue of the *menus* of the human ear, and in some fish the rudimentary evidences of the other two—*malleus* and *incus*—are to be found. The principal divergence is in the absence of the eustachian tube, although the late Mr. Jonathan Couch, of Polperro, the eminent ichthyologist, thought he discovered a trace of its analogue in certain fishes which have an open tube attached by a nervous plexus to the chamber containing the otolith, and in communication with the surface of the air-bladder. This discovery was, by consent, communicated by me to the Naturalists' Society of Bristol, on Oct. 1, 1880, and if the deductions are correctly drawn, the air-bladder is not only the organ of buoyancy, but a huge tympanum also, by which every vibration, however slight, is communicated to the animal.

The subject is an interesting one, and by no means exhausted. Any naturalist, who will carefully investigate and record his observations on the still obscure theories of the hearing of fish, may obtain a European reputation at little more cost than the exercise of industry and perseverance.

WINTER BIRDS IN NEW HAMPSHIRE.—Warner, N. H., Feb. 2d.—In this vicinity, I am sorry to say, there is almost a dearth of the feathered tribe the present winter. There were a few redpolls about in the fall, but I have neither seen or heard of any since; no grosbeaks at all. About the middle of December a fine flock of snow buntings (*P. nivalis*) appeared, containing several individual birds, and this is the first flock of more than a dozen or so I have seen for three years, they having been very scarce here during that time. I wanted a few and went for my B.-L. They had alighted on a flat piece of field up a little rise; I went for them; saw three or four near together just on the top of the rise; thought perhaps they would answer my purpose, and fired, but on going up to those was somewhat surprised to see the snow. For some rods beyond the snow with a few birds. I secured fourteen, twelve of which were in fine condition for mounting. Since that day I have not seen, I think, more than a dozen individuals of this species. There have been very few yellow birds (*O. tristis*), or tree sparrows (*S. monticola*) about, and almost none of late; and not one pine finch or crossbill have I seen this winter. Even the jays have absented themselves to a great extent, though occasionally, but do not remember to have set eyes on one for two months, or near that. Parties who were to procure me specimens of this species do not bring them in; they were very plenty in the fall. This would seem to prove the partial migration of the species, not perhaps to a warmer latitude, but certainly to a different locality. An occasional visit from a pair of nuthatches (*Sitta carolinensis*), and a few days' sojourn of a pair of brown creepers (*Parus familiaris*), complete or very nearly so, my observation on birds for the past two months. The familiar chickadee I have not mentioned, as that little genius we always have in our woods. A friend reports having seen a white-throated sparrow about the 1st of January and taken a fine male purple-finch (*Cardinalis purpureus*). These are rare winter birds in this vicinity. We now have a feeling that spring will be a very merry one, but our little friends will be very scarce, as they cheer us with their glad songs and lovely presence. Although the season has been quite mild here, I hope some winter to report from a less blue-rind (boreal) locality, and where bird, beast and fish do more abound.

M. C. H.

WHEN DO BEARS HAVE YOUNG?—Menominee, Mich., Jan. 21st.—A large black bear was killed a few miles north of here the 15th of this month. The bear was first seen the day before near the railroad, but no effort was made to kill it. Its appearance on the 15th brought out a few men, well armed, who had no trouble in killing her. They found her above the average size and quite fat. By looking around they soon found her den, and in it three small cubs. They must have been but a very few days old, as they were small and eyes not yet open. They were carefully handled and taken away to be brought up on a bottle.

Is not this very early for bears to have young, and is it not very uncommon for the old bears to be out while the cubs are so young? I have seen bears in the latter part of the month of May so small that two could and did sleep comfortably in a common hat. Thus it appears there must be a great variation in the time of bringing forth their young.

M.

The subject of the breeding of bears is one about which comparatively little is known. We think that they usually bring forth in January, but believe it to be unusual to find the mother about when the young are so small. As bearing on this subject of the breeding of bears, we quote the following note contributed to the *London Field* by Richard J. Rowley. He says:—

In April, 1873, I was driving from Pueblo into New Mexico to see the Maxwell grant, purchased by Mr. Wadingham and some other Englishmen. I stopped all night at the Overland Hotel, in Trinidad, on the Purgatoire (called Picket Wire in Colorado), and found in the office, under the stove, wrapped in flannel, a young cinnamon bear, a week old, perfectly blind and fed on milk out of a baby's bottle. Some Indians had found a female bear on the Boston Mountain, and when opened found two young ones just ready for birth; one died, this was the other. I took the trouble afterwards to inquire what became of it, and learned it had been sold to Capt. Schuyler, to take to Philadelphia. The cub had a good thick coat of black hair.

A FLYING SEDER.—Warner, N. H.—I had heard of spiders flying, but until about twelve years ago had never seen the thing done. One day in the fall of 1867, while

resting with a few others near the top of a hill called the Bald Mink (from its having three near its summit and being one of a group called Mink Hills). I noticed a spider, in appearance much like our common house spider, having rather long legs, with not a large body. This spider, when I first saw it, was perhaps fifteen feet away towards the southwest, from which quarter the wind was blowing lightly. Its position was that of a spider hanging on an upright web, but I could see no web at all; it sailed along without the least perceptible motion, and I wondered how it was held so gracefully in mid-air and at the same time moved along so smoothly. It passed within a few feet of us, and all saw it plainly, but just as it had passed a little and was at a point opposite the sun I saw what before had not been noticed but what the reflection of the sun then revealed, a single line of web, which I saw distinctly on both sides of the spider for a foot or more in the direction it was going and several feet behind it. I could see it plainly as it passed a particular point, and noticed that the web was seemingly bent down at the point where the spider rested with its two forward legs slightly bent over the thread. I think I did not see the end of the web on either side of the spider, and could not tell whether it was sliding on the line or whether both were floating together, but feel very sure that there was no other line or web in the immediate vicinity of my first flying spider. M. C. H.

IS IT A MIGRATORY QUAIL?—Philadelphia, Jan. 27th.—While out gunning on Jan. 22d, at Georgetown, Del., Mr. Jacob Fawcett, of that town, killed a bird that resembles our quail very much, but which is entirely white above, breast and lower part, and very much resembles a field lark on the back. In shape it differs very materially from our quail, as it is not near so plump, having quite a long, slim appearance. Mr. Fawcett very kindly presented me with the bird, which I am having set up, and any person wishing to see the same can do so by calling at my place, 1403 South Eleventh street, Philadelphia.

EDWARD MAHER.

We presume that the bird is a migratory quail.

Fish Culture.

FISH CULTURE IN IOWA.

THE Third Biennial Report of the Iowa State Fish Commissioners (1877-8 and 1878-9), now before us, contains abundant evidence of the energetic efforts of the Commissioner, B. F. Shaw, Esq., in addition to the public labors of the State Commission there has been a largely increased interest in fish culture among the people, shown by the establishment of numerous private hatcheries, of which there are now some thirty in successful operation. The total distribution of fishes in various waters during the past two years have amounted to 4,807,800, being an increase over the same period immediately preceding of 1,342,100. These have been—of foreign fish—

"Shad"—40,000 in Cedar River at Cedar Rapids, 40,000 in the Des Moines River at Moingona, and 20,000 in the Boyer River. Lake trout—619,000 in 1878 and 411,000 in 1879, Salmon—as the period of the return of the fish planted in the Cedar River in 1874 is not until 1880 or 1881, the Commission has thought it best to defer further operations in this field until the success or failure of the former trial has been ascertained. California salmon—281,500. Land-locked salmon, of 500,000 hatched in the spring of 1878, only 155,000 were saved from an epidemic. They were distributed to Silver Creek, Clear Lake, Cedar River, Imas River and the Des Moines River. Brook trout—the success of the distribution of 1877 has shown that some of the Iowa streams are remarkably suited to these fish, and attention has therefore been paid to them. Of 110,000 eggs, the majority were successfully hatched and distributed, some being kept as breeders. The report advises that carp and smelts be introduced into Iowa waters, and we doubt not that the former at least will prove an invaluable acquisition to the food supply of the State.

By far the most interesting work of the Commission has been the preservation of the young native fish left by the receding waters in the shoal sloughs of the Mississippi River. This undertaking has already been described in the FOREST AND STREAM, but we transcribe the sentences of the report:—

Millions of native fish die in sloughs along the Mississippi river every season when the water is low. The fish deposit their eggs in these sloughs in high water in the spring. The young fish are hatched in due time; are cut off from the river and gradually dry up, and the young fish perish. The soft-rayed finned-fish die first, leaving the hardier varieties, such as black, yellow, and striped bass, wall-eyed pike, crappies, sunfish, catfish, bullheads, drumfish, etc. To save a portion of these fish from certain destruction, and plant them in waters where they could live and thrive, has been one of the most cherished plans of the Fish Commission. To aid in the accomplishment of this purpose, I first saw the superintendents or general managers of the various railways running across the State from the Mississippi River, and procured their consent to assist in the work, by moving an aquarium car, giving us water from their water-tanks, stopping trains to distribute fish, etc., which necessary assistance they cheerfully gave free. The superintendent of the C., B. & Q. R'y, kindly furnished a suitable car for the purpose, which in a proper time was arranged in a similar but more effective manner than the one described in a former report, that was used for the same purpose in the fall of 1876. Arrangements were made for the use of the little steamer *Dark*, and a flat-boat or barge, and they were fitted up for the convenience of an effective crew of

fishermen. These boats, a skiff, twelve live-boats for young fish, minnow nets, etc., constituted our outfit.

On the second day of September, 1878, with a crew of twelve men, all told, we started on the trip, which was eminently successful, especially so in the first part. As estimated each day by the men engaged in the work, there were taken during the trip 16½ bushels of these young fish. Estimated at the same rate per bushel as in 1876 we took 3,290,000. We fished usually only such sloughs as were entirely cut off from the river and nearly dry, and such as have since been entirely dry. The fish taken from these were saved from the fish dealer, and were just as much of an accession to our waters as if they had been hatched and reared to the same size and age. They were natives of our waters, healthy and beyond the most hazardous period of their lives, and used to finding their own food. If the waters of a great river can be stocked in a few years with a few dozen fish, as has been done with bass in the Potomac and Connecticut rivers, surely we have a right to hope that from so extensive a planting as this in our rivers and lakes. The total cost of the trip was less than eight hundred dollars, which amount would make the cost of the fish caught and distributed less than twenty-five cents per thousand. This work, for cheapness and effectiveness, I think can scarcely find an equal in the whole history of fish culture, and for this our Commission and the people at large are greatly indebted to the railroads for their free and generous aid, without which the work would have been impossible.

As a whole, the work of fish culture in Iowa has been a success, and the report concludes:—

In estimating the results of any labor, it is only fair to also estimate its cost. If we take from the total amount of appropriations for fish culture in Iowa the cost of fixtures and implements, with cash on hand at this writing, we will have expended on fish culture and distribution only a sum equal to one cent for each individual in a population of 1,500,000, during the past six years. In making public improvements in some moderately populated township, if we were limited to a sum equal to only one-sixth of one cent per year for each individual, we certainly should not expect very great results. With an amount equal only to this in the past five and a half years, the results obtained point to lasting benefits that will more than equal those produced by any other equal amount of money ever expended in the history of the State. With the small resources at hand, and nearly three hundred miles square of territory, it has been impossible to visit and stock every small stream or body of water, but the work has been as general as possible, and it is hoped in due time will benefit every available water in the State.

Evidences of success in fish culture are peculiarly hard to obtain. We can see growing crops from the time the seed bursts the ground until the harvest is gathered; but a lake or stream may be full of growing young fish and present no sign of the fact. They may be caught in large quantities, and the fishermen may have never taken from the waters this is to a certain extent the case, as I have learned in several instances. Abundant evidence has, however, in spite of these facts, come to hand.

NEW YORK—Rochester, Feb. 25th.—Feb. 23d we took 6,000 spawn from two California mountain trout and impregnated them with the milt of the Eastern brook trout. This is the earliest time we have ever taken from a California mountain trout spawn. We shall continue to take spawn from our brook trout until about the middle of March.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

GOOD NEWS FOR ANGLERS.—We called at the store of our friends Abbey & Imbrie last Monday. While there we were shown some extra grade fish-hooks which they have been making. They label these hooks (whether loose or snelled) "Highest Quality." They are of all the approved bends, such as sprat, Carlisle, snook, Kendall, etc. Of course the finer are higher than the same bends in regular quality; but no angler will grudge the trifling advance.

It may seem a light thing to improve the quality of hooks, but when it is remembered that the demand for the very best goods is always comparatively small, and also that the expense of the undertaking is just as great as if the demand were large, we think all anglers will feel thankful that this enterprising firm is far-sighted enough to see that such efforts are certain to prove eventually a good investment.

It may be remembered that we said last April that Mr. Imbrie had gone over to Redditch, England, the great manufacturing centre of fine fish-hooks. Well, he spent the whole of last summer in that little uninteresting town of Worcestershire. While there he entered into an arrangement with the best and largest house in that place (T. Hemming & Son) by which his firm con-

trol the whole product of their factory. The price of wire ruling at Sheffield and the general stagnation of trade in England enabled the Messrs. Hemming and Mr. Imbrie to obtain concessions as to quality and price that put them in a position to accomplish the results we now see before us.

We hope some day to see this firm manufacturing all their goods in this country. They assure us, however, that there is as yet no prospect of making their fish-hooks here. Almost everything else they can make here and export to England at a profit.

While at their store we saw also a lot of their very best goods, which have been ordered by the United States Government for the Smithsonian Institution and for the Berlin Exhibition. The excellence of their rods, reels and flies is well known, but we were astonished at the magnificent collection of flies. Some of these flies cost over \$150 a gross to tie. It would pay any angler living in this vicinity to call and see them before they are delivered to the Government.

FLY-FISHING FOR SHAD.—New York.—As the shad season will soon be upon us, I would like to ask Mr. Hamilton, whose letter from Oswego appeared in FOREST AND STREAM Feb. 26th, if he will be kind enough to give a brother angler some points with regard to fly-fishing for shad; what kind of tackle, how much line, kind of fly, and any other particulars which he may call to mind. Also, if he knows of any bait that has been successfully used in angling for shad. This subject I have never seen fully written up, although I have read the FOREST AND STREAM for a number of years, and if Mr. Hamilton can and will gratify us in this respect he will receive the thanks of many fishermen who are now in the North.

SHAD O.

The approved flies for shad are the white miller and coachman. They should be about the same size as those used for bass. In fishing, let the fly sink a bit below the surface, as in early fishing for trout in cold weather. The mouth of the shad is exceedingly tender and great care must be exercised lest it be pulled all to pieces. We should be glad to hear from shad anglers who may detail their experiences for the benefit of our correspondent and others. The fish may be taken with a fly after they have left the salt water, where they are never caught in this way.

GLOUCESTER FISHERMEN AND THE NATIONAL MUSEUM.—The number of distinct contributions by Gloucester fishermen to the National Museum of the United States now numbers 617, embracing many thousands of specimens, some of great interest to science. A recent contribution from the crew of the schooner *Olis P. Lord* numbered over twenty specimens, some of them quite curious, taken on a single trip to Georges banks. Among the contributions of great value is a curious fish known in scientific nomenclature as the *Astronotus niger*, which was found in the stomach of a halibut taken on Grand banks. This fish is a native of the South, being found in the Gulf of Mexico and other warm latitudes, and has never before been taken so far north. This specimen was about eight inches long.

ONONDAGA COUNTY FISHING CLUB.—Syracuse, N. Y., Feb. 24th.—In the fall of 1877 a few gentlemen of this city, seeing and appreciating the necessity of a united effort in enforcing the law protecting fish in waters of this county, met and organized the aforesaid club, the sole object of which was protecting fish in this section from the rapacity of marketmen, who were taking fish by seines, nets and other devices not permitted by law, and in quantities and at such times as had never before been taken in the waters of this county, particularly Onondaga Lake, situated as it is just on the borders of and within twenty minutes' drive of our city.

In the spring of 1878 the club employed as detective a "Jolly John Bull," who has since proved that he cannot be bought or driven, and who "does not scare wily wents," and instructed him to ascertain by whom, when and where, the game law protecting fish was being violated, and report to the club. Upon receiving such information summons were issued to such violators to call at the "squire's office" and show cause why judgment should not be taken against them in sums stipulated by law. Conviction followed in every case, and many of these men gave up their nets and signed an agreement not to again break the law, and were let off by payment of costs. These promises were generally broken, and "would do this and would not do that," found themselves in the Onondaga County penitentiary, serving a day for every dollar of judgment taken against them. This manner of enforcing the law was deemed the most effectual and more conclusive than to first destroy the nets, as has been done in some other sections of the State, thereby involving embittered and angry litigation, that not only arrays the marketmen against all protective clubs and organizations. Depredations have since been, and undoubtedly will be, committed, but these "sinners" have had fair warning and a liberal treatment, without persecution, and if again caught they will get the full extent of the law without favor. The lake and streams in question are rapidly filling with countless small fish; and larger fish in greater numbers were taken last season than in years before.

The club has over two hundred members, composed of many of our best and most prominent citizens, and has accomplished much that commends it to the public, and intends to continue the good work. Now if other similar organizations be formed in every county of this State, having the protection of fish their only object, and the law be so enacted as to forbid taking fish in inland waters except by hook and line, it would not be many years before there would be such quantities of fish in every lake and stream and rivulet that none but a lunatic would ever again think of using a net or seine.

Incidental to this subject, I would like to say that I notice in the FOREST AND STREAM that protective clubs

are continuing to organize in every State of the Union, but I do not see, and cannot learn, that any special, decided, or continuous efforts are made to enforce the law, and these clubs, without such action, are a sham and an expensive delusion. It is time that what has heretofore been no man's business should now be made by concentrated action every man's business. SYRACUSE.

—Next season the Leatherstocking Club, of Oswego, will have a fleet of a dozen or more skiffs and canoes on the Little Sandy pond, which has been leased by a few of the members. Major N. A. Wright has just received a white cedar ducking skiff from Rushton, of Canton, St. Lawrence county, which will go into the fleet. It is a regular nonpareil.

—One day last week at Ogdenburg, Wm. Stillwell, while fishing through the ice, caught fifty-eight fine perch. He baited a double hook with worms and fourteen times he hauled up two fish.

The Kennel.

THE NEVERSINK LODGE KENNELS.

THERE is probably no place in this vicinity where the traditions of the past in connection with big and small game shooting cling more closely than they do with the once wild and inaccessible valley of the Neversink. It is in this beautifully picturesque location, now within easy reach of New York City, that Mr. A. E. Godeffroy, proprietor of Neversink Lodge, has laid out his game preserve and established his kennels. The farm, which covers over one thousand acres, is within two miles of Guyard, Orange Co., N. Y., on the Erie Railway, and about eighty miles from this city. Nestling as it does from side to side of the valley, it is most favorably located for being thoroughly preserved, nor have we ever seen any section better adapted naturally for the purpose for which it is intended.

The preserve is divided by skirtings of low brush and wild grass into a series of large open flats, these being subdivided by a magnificent trout stream of over four miles in length. This has been dammed in four places, thus enabling different sections of the woodcock cover to be flooded and kept in fine feeding condition. Another wrinkle, also adopted to attract the much prized long-bill, is that from time to time during the autumnal flight, spots on the ground are raked clear of the underbrush and drift stuff before the flooding is resorted to, so that when the water drains off the cover is dotted with bare patches of loamy soil. Paths have been cut through the centre of the strips of cover, but the brush and undergrowth have otherwise been left unmolested, leaving a large number of native quail. There are an excellently contrived quail house stocked with over one hundred and fifty birds. These are to be turned out shortly to make room for a large shipment of over seven hundred which has been ordered and will be delivered within a few weeks. Ruffed grouse are quite abundant, and English pheasants are to be introduced. Twenty-five couple of English rabbits are now on their way to a newly made warren in a Yankee home, the hounds having been sent by Mr. Fleetwood Sandeman, of London.

Before speaking of the main kennel it would be well to state that each of the outlying tenant houses are provided with a small kennel, so that as occasion requires dogs can be farmed out and separated from the rest of the stock. On the same principle the puppy kennels are removed by over half a mile from the main kennel.

It is delightful to say that poachers and trespassers find but little comfort in wandering on this spot, and that when captured, as they are nearly sure to be by one or other of the sixty men employed on the farm, their "lot is not a happy one." During the winter an unrelenting war against both ground and winged vermin has been carried on and a rather novel means resorted to for shooting off of the latter. It is a method much adopted in Germany, but little known in the United States. In the centre of one of the open fields a pit is dug large enough to admit a man; this is roofed so as to conceal him; a live owl, the larger the better, is then wired to a tip-up or pedal about twenty-five yards away from the pit; this is controlled by a cord, and worked to make the owl flutter as occasion requires. The owl soon becomes the object of attack of all the hawks and crows in the neighborhood, and as they circle about the head of the emblem of wisdom, they are easily shot from out the blind. Besides this there are certain gins and steel traps placed in convenient perching places that tend to make the life of a lazy hawk extremely monotonous. Altogether, it is one of the most complete, and in many respects the best systematized kennel farm that we have ever seen in this country.

The location of the main kennel is simply perfection for the sporting and larger classes of dogs. Situated as it is on declining ground between the sheltering hills that form the northern and southern boundaries of the valley, and within a stone's throw of the head of the sparkling spring water stream, it receives both the morning and afternoon sun. The building, which is of wood, is eighty feet in length and sixteen feet in width, is admirably ventilated by rows of windows under the eaves of a high peaked roof, and we noticed a wonderful absence of all doggy smell. The flooring is raised from the ground, thus precluding all dampness, and the kennels are ranged on either side of a long and moderately wide entry that runs through the length of the building to the cook-room, which occupies the width of one end of the structure. Entering the building from the other end we pass six kennels on both sides, each of these being six by eight

feet, and each one provided with a separate yard six by fourteen feet. These are used for the general stock, and are occupied by one or a brace of dogs. We then come to four larger kennels, two on a side, for brood bitches and puppies, the two puppy kennels having a large covered extension jutting out into their large yards. All the kennels being so contrived that the dogs can be viewed from either the inside or out, and be moved about from one kennel to another without being brought in contact with either of the stock. The cook-room is supplied with boilers, cooling-troughs, and all the appurtenances of a well appointed kennel. Mr. Godeffroy superintends in person the whole management, but he is also assisted by Philip Thurtle, who was sent out from England about a month ago by the Rev. J. C. Macdonald. Since then Thurtle has had charge of the kennels and the handling of the dogs; he is known as a thoroughly competent man, having gained a reputation on the other side as a first-class field trial trainer, having successfully broken and handled Plunkett and other well known winners. Approachable from the cook-room and two outside gates under the lee of the L shaped barn buildings, is the exercising ground, a very large enclosure with plenty of sun, yet shaded here and there by several old apple trees. This has been thoroughly gravelled and bedded with stones, and is an admirable place to help keep the stock in good condition.

Of the thirty-eight dogs now kennelled on the farm, the large liver and white pointer Croxeth, by Lowe's Young Bang, —S. Price's Bang—Davies' Luna; out of Macdonald's Jane; —Lord Sefton's Sam and Flint, claimed our special attention as an animal that would do well on the bench, and still better in the field. He has only been in this country since last August, where he was brought by the Rev. J. C. Macdonald. He is now a little over two years of age, strongly built, with great propelling powers, and his character is fine; hence it may be well to say that Croxeth, through his ancestors Sam, Hamlet and Drake, combines the best blood of Lord Sefton's, Mr. Whitehouse's and Sir Richard Garth's strains, and is half brother to Sir Thomas Lennard's wonderful pointers, Priam and Scamp, winners of first and second prizes at the Field Trial Derby, 1878, and is also grandson of champion Bang, winner of ten field trials, and never beaten at a dog show; thus combining good looks with good work in the field. This dog was sired by Captain Leonard and Mrs. Newton's Ranger, and Garth's Mite, he inherits the grand strain of blood that culminated in Mr. Garth's extraordinary pointer Drake, who, with Mr. Macdonald's wonderful setter Ranger, ranks among pointers as Ranger does among setters, as the fastest and greatest champion field trial winner of this century. Croxeth won fourth in the English Field Trial Derby, 1879, out of 27 entries, and was runner up at the latter event at the Dog Show at Hanover, May, 1879. For Southern quail, and especially for Western shooting, Croxeth would be a grand dog; he possesses an easy lope, which carries him over the ground which he has an excellent notion of covering as it should be done. We had an excellent opportunity of seeing him handled by Thurtle, who has him under right control, and Croxeth exhibited a nose of admirable quality. The day was spent in a most enjoyable way, and the dog's ability, but although the wind blew fiercely in eddies, and at intervals the snow squalls spattered in his face, he placed his birds astonishingly well and went to them as straight as an arrow, thus illustrating the form that has been accredited to his ancestors. All this was the more commendable when it be remembered that the dog has never scented or been worked on quail until the day previous to this private trial.

Returning to the kennels, we made a thorough tour of inspection, and at once recognized the half imported and half native liver and white pointer bitch Queen, winner of first prize at the New York Show in 1878; she had beside her two fine puppies of two weeks old by Croxeth. Next came another bench favorite, the liver and white pointer bitch Dora, Queen-Sanche; she has but one puppy left three months old, also by Croxeth. This sprightly little bitch was noticed in the puppy's kennel, where we also saw a brace of puppies by Sensation out of Queen. Turning to the English setter class of dogs, first came the imported blue Belton Decima Dash, sired by Llewellyn's celebrated Dash out of Duchess. Dash is about two and a half years old, is a splendid stud dog and has never been exhibited. Close to him was kennelled the celebrated Ranger II, son of Macdonald's wonderful Ranger, upon whose pedigree and remarkable fox exploits the owner has bestowed the name of Ranger II (alluding to Ranger I). Imported red Irish setter Moya, Col. Hilliard's Palmerston-Miley's Rouge; she is in whelp to Rover II. Champion black and tan setter Beauty, Mr. H. S. Jaffray's Ned-Juno, first prize Boston, 1878, second champion class New York, same year. Lemon and white English setter Nelly II. Ranger II-Grainger's Nelly; she is in whelp to Decima Dash. Lemon and white English setter Decima Dash, sired by Ranger I's Lassie, and the blue Belton setter Slick white, tan and black ticked. In addition to the above there is a fine brace of puppies, one black and white and the other lemon and white, out of the latter bitch by Ranger II.

Of the non-sporting classes there are two splendid rough coated St. Bernard dogs. The bitch Bramfels was born in 1876, and was imported by Mr. Godeffroy from the kennels of Prince Solms; her color is lion yellow with black marking, particularly on the head; she is a noble dog and is in whelp to the dog Marco, who is also a fine animal; he is by Macdonald's Pasha out of Prince Solms' Mink; his color, lion yellow and white marking. We cannot close this list of admirable dogs without alluding to the very pretty little fox terrier bitch Lady

Gay, by Paulo out of Nettle; she has just whelped four fine little puppies, by Rattler, and was in her most amiable mood when we met her at the keeper's house.

In bidding good-bye to the Neversink Lodge, its kennels and inmates, we must stop to say to Mr. Godeffroy that we wish him all the success and enjoyment that his enterprise and good taste richly deserve. May his game register show for years to come, the jolly good days that it has recorded in the past.

NEW YORK BENCH SHOW.

Premium lists and entry blanks for the Show may now be had on application to Mr. Chas. Lincoln, Superintendent, No. 141 Fulton Street, New York.

The following railroads have, through their superintendents and agents, agreed to transport free of charge over their lines, to and from New York, all dogs accompanied by their owners, which are intended for exhibition in the Show.

Pennsylvania Railroad—Frank Thompson, Gen. Manager.

Long Island Railroad—C. M. Heald, Gen. Ticket Agent. New York, Lake Erie and Western Railroad—J. N. Abbott, Gen. Pass. Agent.

New Jersey and New York Railway—J. W. Hasbrouck, Supt.

Atlantic Railroad of New Jersey—L. P. Baldwin, Gen. Pass. Agt.

Following are some of the rules and regulations:—

2. Every person who enters a dog for exhibition must be the bona fide owner (or the duly authorized agent of the owners), at the time of closing the entries, and must identify it in the entry by its name, and, if known, its age, and also, if known, the names of its sire and dam. If the name of a dog which has won a first prize has been changed, his name at the time of its winning any and every such prize, and the place thereof, as well as its present name, must be given. If the names of its sire and dam are not known, he must be entered, "pedigree unknown."

4. Puppies may compete in grown classes, except in classes where they are specially excluded, and will be judged as if matured, but cannot compete in more than one class.

5. A dog which has, when a puppy, won a first prize in a puppy class, is not thereby disqualified from competition in a class where first prize winners are excluded.

6. A dog, to compete in a Champion class, must have won a first prize in an open class at Springfield, New York, St. Louis, Philadelphia, Baltimore, Boston '78 or '79, Detroit, St. Paul, or Pittsburgh; and a dog, having won a first prize at any show held above, cannot compete in an open class when there is a Champion class for its kind, but must compete in such Champion class.

7. A dog affected with mange, or other contagious disease, is disqualified from exhibition.

8. The scales of points given in the third edition of the "Dogs of the British Islands," by J. H. Walsh (Stonehenge), will be used by the judges, when necessary, in judging the dogs.

9. Imported English setter is understood to be one directly imported, or whose sire and dam were both imported.

9. Exhibitors will be permitted to take home their dogs every evening after ten o'clock upon leaving a deposit of five dollars with the check clerk, and surrendering their identification tickets, both of which will be returned on the reproducing of the dog in the morning before nine o'clock. If prize winners should be taken out and not returned, the prizes will be forfeited.

11. Exhibitors need not accompany their dogs. They can be sent direct to the exhibition hall.

12. The managers will use due diligence for the care and safety of all dogs exhibited (watchmen being on duty both night and day).

13. The members of the committee and managers will be in constant attendance, and especial attention will be given to the care of pet dogs, commodious boxes with wire netting being provided for the same. Each of these boxes will have a hamp and staple attached, so that the owners may, if they see fit, keep their dogs under padlock and key.

15. No dog will be received unless supplied with a suitable leather collar and chain, and puppies weaned, will be provided with suitable pens, if application is made at time of entry.

17. No dogs, except those from abroad, will be received before 7 A.M., Monday April 26, or after 8 A.M., Tuesday, the 27th. All dogs will be received at the Madison avenue entrance.

18. The show will be opened from 9 A.M. to 10 P.M. each day.

21. Railway arrangements for the transportation of dogs are in course of completion with all railway companies centering in New York, and will be duly announced.

22. Each exhibitor will be furnished with a season ticket, free. No attendant's ticket will be issued, except as season tickets, which will be sold at the usual rates.

23. All disputed questions except those of merit, in any way connected with the judging, will be referred to and decided by a committee composed, if possible, of members of the Massachusetts, Philadelphia and Westminster Kennel Clubs, who will act as a Board of Appeals.

24. Foreign breeders are invited to exhibit at this show and their dogs, which can be shipped to the care of the Superintendent, will receive every care and attention. In the event of dogs from abroad, sent expressly for this show being entered in the non-sporting classes, the premiums in such classes will be raised fifty per cent. It is particularly requested that foreign exhibitors will advise the Superintendent in ample time of their intention to compete, and of steamer by which their dogs are to be shipped.

25. Certificates of award will only be issued to winners of 1st, 2d or 3d prizes.

26. No dog can be permanently removed from the building until 10 o'clock on Thursday night.

A HINT FROM TEXAS.—Galveston, Texas, Feb. 14th.—I am much surprised that those who own good sporting dogs in the West, and who wish to dispose of them (sportsmen, I mean, not professionals), do not advertise them. Am satisfied buyer and seller could get together soon if such were the case.

INFLUENCE OF PREVIOUS SIRE.

BLACKSBURG, VA., Feb. 12th.

Editor Forest and Stream:

A correspondent asks "Are the whelps of a pure setter bitch by a pure setter dog, pure setters, provided the bitch had a litter formerly by a bull dog," and you say no. I am aware of all that has been written on this point by able authors, and yet I doubt it. I speak from experience, for I have been looking for a case of transmitted influence of a former sire for more than thirty years, and have not found one. In an extensive experience as a medical practitioner, I have examined the children of a large number of women by second marriages, and never saw anything more than a mere fanciful resemblance to the former husband in moral, mental or physical traits. I have had setters for many years, and very often bred setter bitches alternately to pointer and setter dogs, finding the so-called droppers the best field dogs, but never saw any case of the influence of a former sire in any of the many litters so bred. My experience with fox hounds has been greater, with the same result. I have examined the foals of some thousands of mares bred alternately to jacks and stallions to see if I could find any traces of the former sire, but entirely without success. I have also made extensive examinations of cattle, sheep and swine, and have made experiments to see if I could produce any such thing. I have done the same with chickens, cats and other animals. Now, therefore, unless such cases were excessively rare, I think I ought to have hit upon one in thirty years' observations. I have examined all the cases which form the stock in trade of authors, and there is scarcely one of them that does not admit of explanation as a common case of atavism, for little or nothing is pretended to be known of the ancestors of the animals in either male or female line. I find no such cases where there is a pedigree of authentic character. As to Mr. Darwin's panglossian hypothesis, it seems to me to be the most extravagant and extraordinary of all recorded hypotheses. If Prof. Agassiz had not written anything on the question, I would look upon the whole thing as moonshine. The facts brought forward by that great naturalist go to show that in the lower animals an individual may in a certain sense have two or more fathers for in certain cases the egg is partially impregnated in a very immature state of development. For instance, the father which impregnates the ova which produce one litter, say of guinea pigs, may at the same time partially impregnate those which form the crop for the next litter, and they, being fully fertilized subsequently by another male, and then the young produced having two fathers as are apt to be like one as the other. But in higher animals, where for longer intervals elapses between the successive ovulations, the chances of such a thing are vastly lessened. I speak from very ample experience, however, and regardless of all theories, when I advise that no one shall give up breeding from a valuable setter bitch which may have been unfortunately impregnated by a dog of another breed.

M. G. ELLIZY.

You will see we say below to A. W. B. that "it is a natural tendency, not an absolute law." Your negative experience does not disprove the positive experience of other reliable observers, nor have we said that this natural tendency extends to other classes of animals than those which have their progeny in litters. There is no reliable evidence that it applies to the human race.

BOSTON, MASS., Feb. 16th.

Editor Forest and Stream:

In your issue of Jan. 29, X Y Z asks: "I have a pointer bitch three years old; has been bred two or three times to a No. 1 pointer; is now in whelp to an English setter. Will this cross affect her future progeny, and in what way?" Your answer to him, and also to B. C. Cooper, is "Necessarily so, but it is not positive that it will not affect her future progeny. Should the bitch have been bred in the first instance to a setter there would have been indications of the cross ever afterwards." Now, for the benefit of the above persons, I should like to relate my experience in the same subject. On the 17th of October, 1877, I had a St. Bernard bitch accidentally covered by a Newfoundland dog, and as it was her first heat I supposed that she would in her future progeny show the cross. When she whelped she was dam to seven as black puppies as I ever saw. Words were inadequate to express my disgust, but I thought I would try again, and watch the result. July 4th, 1878, she whelped, the sire being a thoroughbred St. Bernard dog, and as fine a litter of puppies as I ever saw. I have since bred several litters, and never saw the slightest indication that she was ever cross-bred. I have also seen several crosses when it showed itself in the next litter, but not in the third.

A. W. B.

We should have said there *probably* would have been indications of a cross ever afterwards. It is a natural tendency, not an absolute law.

—Mr. Robinson, of the N.Y.N.H. & H. Railroad, has a very fine pug, which, having been picked up on the London streets, was brought over to America by Capt. Goss, of the *Constantine*. Puggy, who richly merits a more dignified name, has all the points of the finest pug strain, is really a handsome animal, and, we understand, will be entered at the coming New York Show.

LARGE IMPORTATION OF DOGS.—Mr. A. H. Moore, of Philadelphia, intends sending a large string of entries to the New York show. Mr. M. has coming over from the other side seventeen or eighteen dogs—pointers, setters, etc. It is to be hoped that these will reach here in season to be exhibited.

THE DERBY.—Remember, entries for the National American Kennel Club Field Trial Derby close April 1st. Puppies born on or after April 1st, 1879, are eligible.

MONTCLAIR HUNT.—*Montclair, N. J., Feb. 28th.*—The Montclair Hunt, of Montclair, N. J., are about to send to England for another importation of boagies. They breed only from thoroughbred stock.

NAMES CLAIMED.—*Victoria.*—Miss Julia Wygant, of Peekskill, N. Y., claims the name of Victoria (Beau-Belle) for her black and tan cocker, from the kennel of Mr. C. Waddell, Topeka, Kansas, whelped Nov. 23d, 1879.

Prudent and Marvel.—Mr. Garrett Roach, of this city, claims the names of Prudent and Marvel for his two pointer bitch puppies by Mr. Orgill's champion Rush out of Mr. Van Wageningen's champion Duchess, whelped June 21st, 1879; bred by Mr. Geo. Van Wageningen, this city.

Marion and Charm.—Mr. Geo. Van Wageningen, of this city, claims the names of Marion and Charm for his two pointer bitch puppies by Mr. Orgill's champion Rush out of his champion Duchess, whelped June 21st, 1879; bred by Mr. Geo. Van Wageningen.

Elaine.—E. & C. Von Culin, Delaware City, Del., wish to claim the above name for their lemon and white setter bitch puppy, by Pontine (he out of champion Petrel out of Pride of the Border) out of Dr. W. W. White's Queen Anne; she by Carlowitz out of Queen Bess, whelped Jan. 1st, 1880.

Nipp.—Mr. C. H. Hauptman, of Irvington, N. Y., claims the name of Nipp for his red Irish setter bitch, presented to him by Mr. H. R. Bishop, of Irvington, N. Y. Nipp is out of Mr. Bishop's Biddy by his Doctor, born March 2d, 1879. Mr. George Laick, of Tarrytown, N. Y., is breaking her.

Byron.—Mr. Tinsley, of Hamilton, Ont., claims the name of Byron for his white and tan colored cocker dog, by his Dash out of Mr. R. Day's Floss; whelped Dec. 27th, 1879.

Sis and Bub.—Mr. James Chubb, of Cleveland, O., claims the names of Sis and Bub for his two red Irish setter puppies, bitch and dog. Sis for bitch by champion Elcho-Gip, prize winner Pittsburg, Pa., bred by Mr. W. A. McIntosh, Sept. 10th, 1879. Bub for the dog, Arlington-Flora, both prize winners, bred by Messrs. Lincoln & Haller, Warren, Mass., Oct. 15th, 1879.

Trip.—Mr. Geo. H. Bigelow, of Natick, Mass., claims the name of Trip for his dark liver and white cocker spaniel bitch, weight 20 lbs., bred by Mr. Chas. Allen, of Worcester, Mass., out of his Cate by Grip; whelped June 3d, 1878.

Livy III.—Mr. Geo. H. Bigelow, of Natick, Mass., claims the name of Livy III for his dark liver and white Livy-Livy setter bitch, out of Livy II-Livy-Primer owned by Mr. Llewellyn, by Dan, Leicester-Peeres; whelped June 20th, 1879.

SALES.—*Racket.*—Mr. Garrett Roach, of this city, has sold to Mr. D. Ferguson, of Milwaukee, Wis., his liver and white pointer dog Racket, by Sensation out of Queen I.

Rob.—Mr. J. Yeasley, Jr., of Coatesville, Pa., has sold his setter Rob (Rob Roy-Pochontas) to Mr. Arnold Burgess, of Hillsdale, Mich.

WHEELS.—*Floss.*—Mr. N. L. Lafreniere's Floss whelped Feb. 23d, seven puppies, four dogs and three bitches, by Mr. H. F. Deane's Lavacret setter Pride.

BRED.—*Belle-Lord Dufferin.*—Mr. George C. Colburn's pointer bitch Belle has just returned from a visit to Mr. C. DuBois Wagstaff's lemon and white pointer Lord Dufferin. Belle left Babylon, L. I., yesterday, and has gone to Boonton, N. J., for the season.

Countess-Roderick.—Mr. J. Yeasley, Jr.'s, Countess (Lavacret-Pochontas) to Mr. A. W. Moore's imported Roderick.

DEATH.—*Mack.*—Mr. D. D. Lawlor, of the Grand Central Depot, had the misfortune to have his Irish water spaniel Mack run over and killed on Feb. 14th. Mack was a veteran prize winner and was well known to all exhibitors in the East.

Archery.

TARGET VALUATIONS.

BOSTON, FEB. 25th.

Editor Forest and Stream:

The typo in archery appears at first everything as it is, having the sanction of the authorities. As they progress and become better acquainted with its practice and theory, those of a thinking mind who find things which to them seem to be wrong ask, "Why is this as it is?" and they look to those whom they consider authority for an explanation or reason, that they may understand what may be corrected, and that they can go on with the feeling that all is as it should be.

Such was the writer's condition when he put the question, Are the rings of the target valued in equitable proportion? Having no feeling in the matter save to get at a right and just conclusion, he hopes that others will have got the same intent, and that the views of those interested may be fairly presented, not only as opinions, but with reasons for those opinions.

Mr. Will H. Thompson, in the *FOREST AND STREAM* of Feb. 10th, misrepresented the writer, unintentionally, we believe, by saying, "Mr. Brownell even thinks that the archer, who shoots his arrows has no advantage over the one who shoots a small one." This statement, by virtue of its origin, will be accepted by many as a fact, and they will not have a correct opinion of his ideas, for Mr. Brownell never thought or expressed that opinion, and a natural inference would be that Mr. Thompson, being mistaken in that assertion, may be in some of the others expressed in the same article.

The opinion which I first expressed in this question of the relative valuation for the several rings of the target was that the gold and red received too large a per cent. of the total value, and at the expense of the white and black. This thought could be remedied by valuing the several rings from one to five, which would transfer 21 per cent. of the total value of the target from the gold to the white, and 14 per cent. from red to black; and it should be remembered that I referred particularly to the York Round in considering the question, where as I have before shown the majority of hits are in black and white.

I gave serious reasons for thinking as I did, and asked for the objections, and why the present values were adopted. As Mr. Thompson gives them in his communication they seem to be—

First, The difficulty which would result to those who wish to compare scores with those which have been made under the present valuation.

Second, That the valuation of the rings of a target should be in proportion to their area, and that the English early found this to be the case, though they do not follow it.

Now, I am not wholly satisfied with this statement and the explanation of their great variation from what they found to be a fact, particularly as it is not borne out in practice; indeed, it seems to me that it can be proved a fallacy.

Two archers shoot an arrow each at a target. What is the criterion of merit? Proximity to the center. Shooting two or more arrows, the merit must be in their aggregate nearness to the center. How is this to be determined? By measuring the distance from the center to the point hit by each arrow, the total of these distances giving the aggregate, and the less this distance the better the shooting.

Now, to compare this theory with the theory of valuation by area. A shoot five arrows and makes a hit in each color exactly half way between the inside and outside rings. These hits must score by the ratio of area 16.1, and their aggregate of distance from the center is sixty inches. It shoots five arrows and makes two reds, one blue, and two whites, also in the center of those colors. The value of those hits by the area is 30.4, and their aggregate of distance sixty inches, exactly the same as A's arrows. With the distance the same it is not just that A should have a score nearly 60 per cent. better than B.

We have a target of a certain size, with the distance from the center to the outside divided into five rings of equal diameter, and desire to retain its size and divisions.

To rate these several rings by their distance from the center we find that the ratio is exactly 1, 2, 3, 4 and 5. That is to say, the second ring extends twice, the third three, the fourth four, and the fifth five times the distance of the first from the center. These values would contemplate the smaller scores being the best. And to make the larger score the best we must invert the order of values. This is supported by measuring from the outside toward the center, and we find that the second ring is twice, the third three times, the fourth four and the fifth five times the distance of the first ring nearer the center, and should increase in value in that proportion. And I arrive at the following conclusion:—

There is but one accurate method of comparing scores in shooting, and that is, to measure the distance from the center to each point hit, and divide the aggregate by the number of arrows shot, giving you the average distance from the center for the whole number of shots.

This would require a target large enough to take in all arrows shot, and is, of course, impracticable for general use; but in this way we can figure out the difference between scores, and compare it with the difference in the same scores, figured by one or another valuation of the rings of the target. In this computation I average the hits in each color as being midway between the inner and outer edge of that color, and multiply the distance from the center of the target to the center of the color by the number of hits in that color. For golds, I take one-half the distance from the center to the outer edge (2.4 inches) as being the average of the hits for gold.

The misses I average as hitting the center of an imaginary ring outside the white, and of the same breadth, or 2.4 inches from the center.

I have figured all the American Round scores made at Beacon Park, by this measurement, by the one to nine, and by the one to five valuations, comparing one-half with the other; and also many single scores in the same several ways, and have not found an instance but in which the difference by the one to five value was nearer the difference by measurement than the difference by the one to nine values.

To illustrate, I will take the scores previously mentioned, 29 hits, 145 value, revalued 57, and 30 hits, value 122, revalued 76.

By the present valuation, the score of 29 hits exceeds that of 30 hits 18.8 per cent., by the revaluation 14.4 per cent., and by measurement 14.1 per cent., showing the revaluation to differ from the measurement only three-tenths of one per cent., while the present valuation differs nearly five per cent. Taking two sixty-yard scores from my score-book, 23 hits 110-47, and 17 hits 73 or 84, the present value of the 17 hits exceeds that of the 23 hits 24 per cent.; while by measurement the 23 hits average 38.6 inch nearer the centre, and by the revaluation 2 points more than the 17 hits.

Taking the Beacon Park scores of 50 hits, 202, and 55 hits, 201, by measurement, the 55 hits average .11 of an inch nearer the center than the 50 hits, showing the 55 hits to be the best shooting, and it should have the larger score; revalued, it exceeds the score of 50 hits two points.

It is only in the comparison of a score of many hits and small values with the score of few hits and large values that the relative positions are changed, and I ask, is it anything but justice to the many hits in the outer colors to give them their just proportion of the total value of the target?

Let us give fair and just consideration to all suggestions and improvements, for they cannot materially change archery from what it is and will be. Make over conceivable improvement or change in the equipment—its but a small part of the play—for you will get the prevailing portion of the sport, the individuality of the archer, unchanged and unchangeable.

As for the difficulty of comparing scores, as long as we retain our 48 inch target and the five equal divisions of it, there will be but little trouble for anyone to compare their scores with those of old or with others of the present time. Each archer has, or should have, his detailed score in his score-book. If A, who uses the 16.6 values, wishes to compare his score with any made by the present valuation, he has only to figure up his hits in the several colors by that valuation, and use *versus* for it. He uses the present valuation, and wishes to compare his score with A's. I cannot understand why it is that Mr. Thompson wishes us to practice archery another year before we ask questions, and see discord in discussion. If there is to our present system of archery which will not bear discussion, it is better to out with it at once.

It is, of course, to be desired that we keep a uniform valuation, and I am not one to advise a change without due and proper consideration. Nor will I put the question of changing the for and against; but in view of the foregoing facts it does seem to me that there is something in a proposition which is harmonious in theory and practice, as against one that does not accord in those particulars.

—ANDREW S. BROWNELL.

PACIFIC COAST ARCHERY ASSOCIATION.—San Francisco, Feb. 20th.—Six clubs were represented by their delegates at the meeting of organization to-day, the Oakland Bow Club, by P. C. Havens and Al. W. Havens; Pacific Archery, by C. C. Cadman, Harvey Darnall and T. M. Ward; Mohin Bow Archery Club, by J. P. Allen, A. F. Low and W. L. Oliver; Capital Bow Club and Sherwood Foresters of Sacramento, by G. W. Lettwith; Merry Foresters, by Daniel O'Connell (Al. W. Havens, proxy). C. C. Cadman called the meeting to order, and stated that the object was to further the practice of archery throughout the United States. The following officers were then elected:—President, C. C. Cadman; First Vice-President, N. B. White, of Sacramento; Second Vice-President, J. P. Allen; Recording Secretary, Harvey Darnall.

Treasurer, A. W. Havens. Executive Committee:—Daniel O'Connell, F. C. Havens, F. M. Ward and George E. Mills, with the President added as an ex-officio member. The rules and by-laws of the Pacific Archery Club were adopted with a few changes, for the government of the Association.

It was decided to have two general meetings every year for competitive practice, one in May and one in September. At these meetings it is proposed to have a visitors' prize, open to all archers living in parts of the State where no clubs are in existence. All team shooting must consist of four members in each team following the American Round. The champion medal to be shot for according to the "Double York Round," and the championship medal according to the "Double Columbia Round."

CORLAND ARCHERS.—Corland, N. Y., Feb. 28th.—At our regular weekly meeting for practice at Van Bergen Hall the following scores were made by the members of the Corland Archery Club, who were present; distance, 30 yards; 90 arrows each:—

Dr. F. O. Harty.....	182	203	202	Total.	610
Willis Cloyes.....	185	215	202		602
Wm. Cloyes.....	200	190	200		590
Jas. Scherhorn.....	190	182	194		566
G. Hull.....	182	180	174		536
A. Mahan.....	181	164	160		495
C. F. Turner.....	170	144	148		462
Dr. G. S. Smith.....	148	148	179		475
Mrs. A. Mahan.....	102	216	84		402

The club began practice early in December, 1879, and but few of the members had any previous practice. We will send you scores made at regular club practice from time to time, and hope other archery clubs will do the same. A. M.

—The New York Archery Club have a masquerade sociable this evening.

Answers to Correspondents.

Correspondents who may send us their proper name and address will always receive prompt attention in these columns. We require a man's name for two reasons: (1) sometimes as a guarantee of good faith, and (2) always as a matter of common courtesy.

R. B. D., Prescott, Ont.—See answer to another inquirer.

GRAY, St. John, N. B.—The so-called "pheasants" are properly ruffed grouse.

J. F., Philadelphia.—Write to Manning's Yacht Agency. See his advertisement.

L. New York City.—The lady, so far as we can learn, is no longer in business.

W. A. R., Brooklyn, N. Y.—For the instruments apply at any taxidermist's store.

W. S. L., Jamestown, N. Y.—Write to E. I. Horsman, New York, for lifting machines and spirometers.

J. C. V., Warwick, N. Y.—The open season for trout in New York, is from April 1st to Sept. 1st.

G. T. S., Philadelphia.—You probably have in mind the mullet sucker, which goes by half its name in the different localities.

F. A. J., Fort Garland, Cal.—Write to the National Rifle Association, New York, for rules governing Creedmoor matches.

E. F. G.—If you will write to G. H. Thomas, Durbin, Mass., he will give you dimensions, etc., of *Hermes* and *Siren*, schooners.

H. R., Toronto, Can.—G. was returned; therefore A. wins his bet. A walk over in a "play or pay" match is considered a race.

"AL"—Will "Al," who wrote sketch of Sharbot Lake, Ontario, in our issue of July 10th, 1879, please send his address to this office?

G. S. O., St. Paul, Minn.—The *Natural Bulletin* is published at Cambridge, Mass. All business communications should be addressed to Ruthven Deane.

C. E. M., Baraboo, Wis.—The stone is common iron-stained quartz, of no commercial value, and does not indicate the presence of any metalliferous deposits.

J. B., Fort Meade, Dakota.—You will find what you want by writing to Hartley & Graham, Maiden Lane, New York. Let us hear from you of condition of game.

J. H. B., Ottawa.—You may send your fish in the spring and summer to Chappell & Storor, Fulton Market, New York. Prices vary, and Mr. Chappell will keep you informed of market rates.

E. F. B.—The recipe for preserving sails was furnished by reliable parties, and we consequently can recommend it. Avoid all strong acid or chemical solutions, as they are liable to rot the canvas.

CRUISER, Portland.—The rig should be governed by the yacht's stability. We should suppose that water-line keel was excessive. About 75 per cent. will be ample for forty-foot class of usual model.

J. Y. D., Altoona, Pa.—We do not know where live quail may be purchased. If any of our correspondents can inform us we should be extremely obliged for the sake of many readers who are seeking birds for restocking purposes.

R. M., Bath.—We never knew any one who actually tried the cutter rig to go back to the sloop. Talk is cheap, but facts count. Note the rapid increase in cutters East and West. See letter from Michigan this week.

S. T. L., Applebush, Pa.—I. You may write to Martin Benjamin. 2. The collic dog is the best for bringing the cows home from pasture. A great many farmers use them for this. You will see something about them elsewhere.

H. H., Hoboken, N. J.—Your query was incorrectly printed in last week's issue; you having stated that your dog had had the mange. If you find that the friction treatment does but little good, you might rub the bare spots with cod liver oil.

CRUISER.—Camber implies a rounding upward, as applied on page 80 of Nelson's "Bent Building"; the keel curves upward at bow and stern, and would touch the floor at those points only if turned upside down. The author is a little obscure.

E. L., Hannibal, Mo.—I. We cannot give you the dimensions of the steel canoe. It is not in the market. 2. It is unsafe to use soda powder in the 45 de-carbonated steel guns. Some of them will stand it and others will not; it is best to be on the safe side.

H. M. H., Cincinnati, O.—I have a red setter bitch out of Bassford's Gipsy and Rory O'More; she is now eight months old and only weighs twenty-eight pounds; is not this too light? Ans. From thirty-five to forty pounds would be about the proper weight.

C. W. E., Boston, Mass.—Your answer last week should have read: By the term "Imported" English setters, in the New York Bench Show, will be understood a dog born in England, or whose sire and dam both imported from England. See the rule of the Club elsewhere.

E. W. C., Corsicana, Texas.—Messrs. Caswell, Pettor, Galpin & Co., of this city, are publishing a most excellent serial, termed "The Illustrated Book of the Dog." It is by Vero Shaw, and covers ground you wish. It is issued in monthly numbers at 40 cents each. Seven numbers now published.

H. M. L.—To charter a yacht in Boston, apply to the builders, etc., at City Point, or advertise your wants in our columns. About \$35 to \$40 a month for good craft. For long period, special terms. For navigation get "Yachtsman's Handbook," Williams & Co., 257 Washington street, Boston. Price about \$2.

C. S. K., Washington, D. C.—Please give the exact age and pedigree of the Laverack puppy presented by Mr. Chas. H. Raymond to a friend in this city. The dog is white and lemon, and is named Cossack. Ans. Cossack is by Morford's Don, out of Raymond's Fairy, and is, we believe, about ten months old.

C. P. E., Cleveland.—I. Is a cylinder-bore inferior to a choke-bore? 2. Is a load of 4 lbs. powder, 1/2 oz. shot too heavy a charge for a fine Parker, weight between 7 and 8 pounds, cylinder-bore No. 12? Ans. 1. Yes, for shooting qualities, if you mean two guns of the same grade. 2. No, but more powder than is usually used.

J. K. P., Baltimore, Md.—In the vicinity of Winnipeg, Manitoba, you will find all the game you want—pinnated and ruffed grouse, woodcock, duck, plover, geese, swans, cranes, pelicans, etc., and white hares. It is a magnificent land for game and fish. There is also much large game in the country easily accessible from Winnipeg.

N. H., Williamsport, Pa.—Has a 30-inch barrel gun any advantage over a 28-inch in aiming, and if so what is it? Ans. The advantage is in having the sights further apart, and is inappreciable at short range. In long-range shooting the superiority of the 30-inch over the 28-inch is very considerable, other things being equal.

G. F. D.—Write to the Bureau of Immigration, Tallahassee, Fla., for information relative to lands about Fort Worth, Fla. There is abundance of Government land in that State, and plenty more that may be had for a song. To engage in orange culture go to the southern and south-eastern portion of the State, below the frost line.

G. F. P., Macon, Ga.—I. We know nothing of the firm you mention; believe that it burst up, and burst every one who dealt with it. 2. The rifle you mention is not to our knowledge handled by any of our advertisers, and we know little of it. The best repeating rifle, according to the testimony of our correspondents, is the Winchester.

A. O., Baltimore, Md.—For anatomy you will do well to procure "Owen's Anatomy of Vertebrates," Longmans, Green & Co., London, 1870. For fishes, get "Jordan's Manual of Vertebrates," Janssen, McClurg & Co., Chicago, 1878. We shall shortly publish a list of text books and works of reference in some of the branches of Natural History.

D. D. B.—We believe it is only a certain process of paper-bent making which is patented. But no one will harm you if you build only for your own pastime, though the law allows you to do so only for experimental purposes; a very vague phrase, which can be made to cover a great deal. Marine gun or shellac varnish will serve the purpose.

L. E. W., Hay's Corners, N. Y.—1. The Winchester rifle has best cast steel barrels. 2. It is safe for rapid firing. 3. We do not know anything of the other rifles. 4. You do not need any oil on your rubber boots. 5. For rubber goods send to the firms who are represented in our advertising columns. 6. Carver is in Europe. 7. Bogardus is in Chicago.

F. A. K., St. Paul, Minn.—My pointer has an eye which is constantly running and much inflamed, caused by a kick from a horse some six months ago. Have tried a number of applications with no success. What had best be done? Ans. Nature of the injury too indefinite. Write more explicitly, and name the applications you have tried and which have failed.

C. Vaidetos, Ga.—We should think that A and B, having tied, ought to play it out. We are not authority on Casinos, however, nor on any other game of cards. Should we profess to be, this column would be deluged with a never-ending series of calls for card decisions, the settlement of which would be hardly worth the while of an intelligent and disinterested man.

E. A., New York.—The strain of Mr. J. B. Miley's Grouse is excellent on both sides. On the sire side Gift goes back to La Touche's celebrated breed, and Andrew Dunne, who owned Loo and Game, had his breed of Irish red setters for over fifty years. Rouge, the dam, goes back to Hendrick's and Clairacrie's breed, the latter having the reputation of being among the purest in Ireland.

D. W., Esperance, N. Y.—1. The Tathams use avoirdupois weight, 1 ounce of which contains 4371 Troy grains, 480 grains Troy making one Troy ounce. 2. All of Dixon's implements are numbered for convenience in ordinary goods. The numbers are arbitrary, and beyond designating different articles have no significance. The measures Nos. 1,109 and 1,107 differ only in style of handle, not in size.

F. D. L., Indianapolis, Ind.—My Gordon setter, three years old, has a black substance growing over his eyes, which now covers about one-quarter of the eye, and in order to see me or any object a little distance he has to raise his head. Will consider it a kindness for you to advise me what to do. Ans. It is probably due to a growth that can only be removed by a surgical operation. We would advise you to consult a medical practitioner.

W. A. S., Greenfield, Mass.—My setter dog has a white film growing over one of his eyes. Can you, through your valuable paper, inform me what will remove the film and restore the sight? Ans. If the film is due to opacity of the cornea it will be permanent; if of more sensitive character, it may be removed by dusting into the eye twice a day a very finely pulverized powder, consisting of one part white sugar and two parts colloid. Write the result of treatment.

F. W. J., Unionville, Conn.—1. By chambering shot is meant so arranging the pellets on the wad in the shell that they will be flattened one down upon the wad, and the whole layer fitted snugly in the shell. In choke-bore the shot should be chambered on a wad fitted into the barrel of the gun at its most confined point. You will find many useful hints on this subject in recent numbers of this paper, and a little experimenting will show you how many shot your gun will chamber.

CRUISER.—S. informs us that after a season's experience with Coughtry's collapsible dingies he can recommend them in all respects. They weigh only from 35 to 50 pounds, according to size; are easily folded and expanded; sit into their length, half their beam and five inches their draft; are quite seaworthy and wear well, but if blown to the lee, or overboard, as they break easily when deeply immersed. A nine-foot boat will carry two men in safety, but three will be too much for her.

C. New York.—I have a setter bitch two and a half years old that has warts in her mouth. What shall I do for her? Ans. You do not state if the warts are isolated growths or so numerous as to constitute an eruption of warts. If the former, use ligature, i. e., a silk thread tied very tightly around the base of each wart; if the latter, use caustic of nitrate of silver. Bit the dog in either treatment with a piece of rubber hose; you will then be able to work more freely and quickly.

W. B. H., Cooperstown, N. Y.—1. I have a rifle, "Greene's patent, Nov. 17th, 1857," but have never been able to obtain cartridges that would fit it. 2. Does the gun load at breech or muzzle? Ans. 1. Your rifle, like many others made at that time, is antiquated, and you cannot find cartridges for it. Better dispose of it and get a modern arm. 2. We confess ourselves unable to tell you. You might look up the patent records at Washington, and see what Greene claimed it to be.

J. W. T., Ashland, Ill.—My uncle, near here, has a fish pond, covering about seven acres and running down in depth from four in to ten ft. It is stocked with our native fish, and would like to see part or all of it with wild rice, so as to make it a good feeding place for ducks and geese? Ans. This would add much to the sporting value of your pond. Rice may be sown either in spring or fall. We have two advertisements of seed for sale in another column. Follow the directions already published by ourselves and you will be successful.

R. W. B., Derby, Conn.—My dog is excessively constipated. Have tried pills and injections, but thus far without relief. As might be expected, he eats little. What shall I do for him? Ans. Feed no meat for a week with the exception of boiled liver, to be mixed with vegetables and corn meal properly cooked. For immediate relief, an enema of a tablespoonful of castor oil mixed, and if medicine is needed subsequently, a teaspoonful of castor oil with two of olive oil once a day, combined with plenty of exercise.

A. B. S., Suitland, Md.—My setter bitch three years old has a very bad cough. She coughs continually, except when lying down or when asleep. She is in good order, and eats well, her eyes do not discharge, nor does she in any way show distemper. When she is coughing she tries to vomit, but does not succeed. Please advise me what to do. I do not know whether she has had the distemper or not. Ans. Try a tablespoonful of salt dissolved in water, followed in a few hours by an ordinary dose of castor oil. Write to us the further symptoms.

FOREST.—1. How heavy should a 45 cal. rifle be and what length of barrel for shooting up to 500 yards accurately? 2. What game may be found in Maine? 3. When may game be killed under existing laws of that State? 4. Where can Newhouse's steel traps be bought? Ans. 1. Nine and a half pounds, with 30-inch barrel. 2. See in last week's paper descriptions of the Rangely country. 3. The open seasons of that State are: Deer, Oct. 1st to Jan. 1st; sea fowl and plover, Sept. 1st to May 1st; mallard and pinnated grouse, Jan. 1st to Sept. 1st; salmon, April 1st to July 1st; land and sea salmon, from June 1st to July 1st to Oct. 1st; black bass, Oswego bass and white perch, July 1st to April 1st following. There are a number of special local provisions. 4. For sale by the Oneida Community, Oneida, N. Y.

P. M. C., Franklin, N. Y.—Some unprincipled parties in this town, who have some extraordinary poor specimens of cocker spaniels which they breed for sale, have named them the same names as some of my fine specimens, evidently with the intention to deceive the purchasers of their pups, for by their pedigrees one might suppose them to be out of my stock. What is the best remedy in the matter? Ans. There can be no remedy except to make the matter known as thoroughly as you can among your patrons. There is no law to prevent a man from naming his dog anything he may please. Common courtesy regulates these things. If any purchasers of cocker spaniels are deceived through misrepresentation, that is a matter for them to take care of. If you can show any positive injury to your own trade, consult a lawyer.

B., Boston.—It is generally assumed that wide, shallow boats will not profit by ballast on the keel. They have, or ought to have, sufficient stability without such aids, and if they have not, their model is so faulty that lead outside would not improve them much, as to lead inside would be caught at the depth. No experiments are on record to cover such cases, and we think the extra friction added would hurt more than the gain in stability, which would be but slight. A keel would, however, make her steer much better, and be easier on her helm. The fault is one of trim, or wrong location of center-board, if the model is not extravagant. Changing to jib and mainsail might be advisable, as the cat-rig is the worst balance of any devised. As an experiment, however, it might be desirable to try weight on keel, though public opinion is against success, but public opinion is loosely formed, and may be in error. We have no data to give a more decided answer. Generally, stretching ballast more fore and aft will make a boat less "quick" in rough water.

A SUBSCRIBER, Palmer, Mass.—Please advise me what to do for my setter dog. Symptoms are a smacking of his jaws while awake, swallowing in sleep, and making a noise as if his mouth was sticky and clammy. He lies stretched upon the floor while in sleep, and his legs jerk and twitch. His coat is dry and faded along small back and sides. Seemingly very nervous at times, and will start suddenly as if frightened, when all is quiet. Appetite is seldom poor. I feed him on scraps from table, Indian meal cake, wheat bread and crackers; these I sometimes give in milk. Ans. Milk should not be given to growling dogs, but buttermilk may at times be mixed with food. Your dog has worms. As you neglect to give the age of the dog it is impossible to state the exact quantity of santonin which we would suggest you to give; we therefore leave to your judgment to administer two doses, according to age, of from five to four or five grains of santonin in small piece of bread; one dose the santonin on an empty stomach, followed the next morning by similar dose, and from four to six hours after from half-ounce to ounce of castor oil.

PUBLISHER'S DEPARTMENT.

MALARIA DESTROYED.—G. A. J. Gadbois, of Brockville, Canada, certifies that he was prostrated by a malarial disease contracted in Texas, and was quickly and completely cured by the use of Warner's Safe Pills and Safe Bitters. He adds: "I shall never travel in that climate without your Safe Pills and Bitters as a part of my outfit.—Add.

Canadian trout anglers should not fail to read the notice of Messrs. Irwin and Clarke, who have built a sportsmen's hotel at Mayanetevan village.

—The Old Judge who passed sentence upon the particular brand of tobacco bearing his official seal was never accused of corruption, nor did a jury ever find a verdict contrary to his charge.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE ON MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

No. 111 FULTON STREET, NEW YORK.

[Post Office Box 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 75 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 4, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

Send for Circular of Premiums offered by the Forest and Stream Publishing Company.

Notes.—"Wallace" is mistaken when he says that few clergymen indulge in field sports. There may be few when we compare ministerial gunners and anglers with the whole clerical body, but our experience goes to show that a large proportion of ministers follow the trout streams and mark down the beaver, and as a class the clergy are as favorably inclined to field sports as are the members of any other profession. We took our first lesson in trouting, one Monday morning, years and years ago, up in a mountain brook, from a man to whose sermon we had listened the previous day. Our correspondence brings us into pleasant relations with many clergymen, who read the FOREST AND STREAM and write for its columns; indeed, some of the best known pseudonyms which appear in this journal belong to ministers. There is no conflict here. Good health, cheerfulness, manly vigor and strength are as desirable in ministers as in laymen. Their acquisition and preservation are not only right from a worldly standpoint, but—unless we very much mistake the spirit of the Gospel—are Biblical as well. He is an upwise clergyman who withholds his sympathy and influence from properly conducted field sports and clubs organized for participating in them. No minister need sacrifice his dignity nor influence by joining a gun or fishing club.

The use of popular misnomers in natural history is by no means limited to America. A writer in the *Asian* gives a tabulated list of eighty-five names popularly and erroneously given to a few mammals, birds, reptiles and fishes, and this he claims is only a partial list at that.

"Yell" paints a glowing picture of the attractions of Arkansas. The paper will do to file away for next fall and winter. The mention of Guyon is particularly appropriate, coming with a letter from that person, which we publish. With Reel Foot Lake duck shooting to be had, the Memphis sportsmen might well defy the restrictions of yellow fever quarantines.

This has been a remarkably open winter, and that may account for the presence at this season of the sea serpent off the New Jersey coast. *Mem.*—Sixty feet long; dorsal fin eight feet high; color, black and white. A little fellow, nineteen feet in length, alongside. Observed by Captain Maloney, of the schooner *Frank Atwood*.

THE COLLIE OR SHEEP-DOG.

AS announced in our issue of Feb. 19th, the Westminster Kennel Club contemplate inaugurating at Central Park, a sheep-dog trial on the 30th of April, the day following the closing of the Bench Show at Madison Square Garden. This practical illustration of the usefulness of the collie will undoubtedly be the most interesting feature of this year's programme; and if properly carried out, as we are assured it will be, will give the inhabitants of our cities an opportunity of witnessing the wonderful intelligence of an animal which belongs strictly to the rural districts. All field trials of this kind that tend to display the usefulness of dogs, and the wonderful sagacity of each individual class, do more than amuse and interest for the time being; they teach a lesson and preach a sermon of instruction. This is a step in the right direction, and we trust the time is not far distant when water trials for Newfoundland dogs will follow this initial movement. We are thoroughly convinced that the intelligence and capabilities of the various breeds of dogs outside the sporting classes is not sufficiently utilized, and it should be man's ambition to strike at something higher than making him beg or give his paw. It is the fortunate lot of the sportsman to have proved to him daily the wonderful intelligence of his four-legged companion, and the absolute necessity for him. To one, however, who never leaves his city home, the dog does not command the same respect. If he is small he is constantly being associated with circus trick dogs that affect a pipe, or should he be large, with the unfortunate mongrel that is harnessed to the prowling rag-man's jingling cart. For one reason alone should bench shows then be patronized, for they tend to elevate the dog in the scale of the animal kingdom.

Unquestionably the Newfoundland is one of the greatest favorites outside the setter and the pointer. From early youth his excellent and steady qualities are impressed upon our mind. No child's book or early primer is without his picture, and the variety of occupations in which he figures is incalculable. On one page we see him enforcing a strictly moral lesson by dragging the pilfering school-boy from off the apple tree, while over the leaf his courage is displayed in rescuing a young miss from a duck-pond grave. We grow up to recognize in him all the amiable, generous and domestic characteristics of a fine disposition, combined with a courage and fearlessness that is sure to win man's heart. Therefore, we take it, that a race of powerful dogs of this breed could be very profitably employed at our life-saving stations, and that at times their sagacity, watchfulness and fearlessness would prove of great advantage. How often it is that a ship-wrecked crew almost gain the shore and are drowned in the very face of a shalving beach. These dogs could be trained to patrol the beach and give a warning, after the manner that the St. Bernards are trained for the service of the Hospice; while the tutoring to save a drowning person could be easily effected by means of lay-figures similar to those used some time since at the water trials in England. Thus in a short time the honest Newfoundland would have gained for himself quite as romantic and weird a history as his stately brother way up upon the Alps.

But to return to our mutton. The sheep-dog trials were first inaugurated at Bala, North Wales, by Mr. R. J. Lloyd Price, and later on this gentleman gave Londoners a treat by bringing a flock of one hundred wild Welsh sheep up to the Alexandra Palace in 1876, the following interesting account of which we extract from the "Illustrated Book of the Dog," by Vero Shaw:—

Here three sheep were picked out of a flock (which was folded in a remote corner of the park), and were carried to the field of operations on the side of the hill. They were then liberated, and the dog whose turn it was to work them was required to pen them in a small fold situated in the middle of the green bounded by the race-course. The only assistance the dog received was from his master, who was, however, forbidden to touch the sheep under penalty of disqualification. Those acquainted with sheep will fully appreciate the difficulties of the task (thus set the shepherd and his dog, for wild Welsh shepherds very unlike the civilized ones met with nearer towns.)

To quote further from the account published at the time in the *Live-Stock Journal*:—"Some of the dogs were so well trained that many spectators expressed the utmost astonishment at the intelligence they displayed. Some of them lie down before the sheep so as to let them recover their equanimity; then they get up quietly, move a step forward and lie down again; they they repeat over and over again, producing a corresponding step of the sheep toward the entrance of the pen, and finally they fairly drive them in, almost unconsciously to themselves."

From the above description it will be seen that the collie field trials at Central Park will be properly recognized as an additional feature in this year's show.

Several anonymous correspondents, whose favors would receive attention were they accompanied with names of writers, are respectfully referred to the notice at the head of this page.

—He is sailing under false colors. We hear of him every season; now in the woods of Michigan, slaughtering a deer out of season and then leaving the carcass where it fell, because he dared not go to pick it up; again, under cover of official position, yanking out the gravid fish. Now comes the story of his exploits in Maine, shooting the mother swallows over their nests. He is sailing under false colors, because he calls himself a sportsman and when opportunity offers talks feelingly of game laws and the need of more efficient protection for our game. There is a well recognized punishment for the master of a ship on the high seas who flies the wrong flag at his port. Sportsmen owe it to themselves to disown and denounce these fellows who rig out under false pretenses.

—A woodcock in full plumage was found clinging to one of the windows in the Grand Central Depot, this city, last Saturday, and recovered by Mr. T. B. Moody, who will have him prepared for one of the decorations of the Superintendent's office.

—Mr. E. W. Messinger, of Boston, has returned from a very pleasant fortnight's quail shooting in North Carolina. Mr. Messinger stopped at Tarboro, a thriving village, right in the midst of a magnificent quail country, with a few woodcock and plenty of wild turkeys. The route is to Rocky Mount, between Weldon and Wilmington, thence eighteen miles on a branch road. Tarboro has good hotel accommodations at moderate rates; and the people are among the most hospitable in the land.

—March came in like a lamb; whether or not the old adage will prove true remains to be seen. Spring notes have already begun to reach us from observers in different sections of the country, showing that at least the birds have made up their minds to warm weather.

—The Onondaga County Fishing Club has made itself a power in the land by vigorously carrying out the work for which it was organized, namely, seeing that the laws already on the statute books are enforced. This is altogether a different undertaking from that of securing the enactment of new laws. Let us have other societies established on such a working basis.

THE SALMON OF ALASKA.

SITKA, Christmas, 1879.

THE mail steamer arrived on the 21st inst. and left on the 23d inst., and this is the 25th.

You people who live in the world can hardly realize how much is covered in the above paragraph. We hero in Sitka, outside of a circle with but a mile's radius, have existed six weeks with as little communication with the rest of our planet as had the inhabitants of Neptune or Uranus till the arrival of said steamer, with her weekly mail, fraught with good and evil tidings, long looked for, hoped for and dreaded, transformed our lives from lethargy to confusion and excitement. And when the dip of her colors as she turned ahead full speed indicated to us that again we were left to our own resources, to hope and pray that another month of our lives would pass away as quickly as possible, a reaction came, and our happiness at the sight of her bow was equalled by that of her stern. For during her short stay we could neither read, eat nor sleep comfortably, for while so doing we might be wasting precious moments, during which we might be gathering in from the careless utterances of those favored mortals who had just come from the world, and would soon return to it, some bits of news which they might drop. But though we could do nothing else we had to write, for failure to answer during that brief period of confusion, letters just received and hardly understood and digested, made a full month's difference in the time of their receipt—a consumption most evidently to be struggled against.

For a full day after her departure I forswore the pen, and gazed with awe at the immense pile of papers and periodicals I must attack and wade through before I could be even. I filed them all by dates, though, and have before me the task of reading up complete files from Oct. 13th to Nov. 27th. And it is a task in a country where one's reading has to be done by artificial light.

I began, of course, on my FOREST AND STREAM, and I have spent my Christmas up to this hour (3 p.m.) in first skimming, and then, for reasons which presented themselves, carefully re-reading your issues from Oct. 23d to Nov. 27th inclusive, that of Oct. 16th not having been received. While so engaged, I have made a few notes in regard to points on which to write you; for I think that I cannot employ my time to better advantage than by giving you, and through you the lovers of natural history, a few connecting links between sets of facts presented through your columns by various contributors at different times, and in one case add a little more testimony already given upon the solution of a problem which you say "has been the subject of earnest inquiry and investigation by leading naturalists for the last seven years," viz., as to the identity of the redfish of Idaho. While skimming I was struck by the engravings in your issue of Nov. 13th of the redfish of Idaho, and ejaculated, "Redfish! Dog salmon!" And summoning some piscato.

rial friends, my opinion was confirmed. Then I read carefully the letter of Capt. Bendiro. Your foot-note referred back to issue of Oct. 23d; read in it Bendire's first letter and your comments, and am ready to assure you that in saying "from the description above given of the redfish, there seems every reason to believe them identical with salmon, a variety of which are so common in Alaska, as described by our special correspondent there," you were beyond a question correct. The sketch and the description of the redfish fit the dog salmon perfectly, which salmon are in fall very plentiful in all fresh water streams in this vicinity. Capt. Bendire is correct in judging that the hump could have been more strongly portrayed, for I have seen many specimens where the contour line I have drawn on the sketch which I return, would more correctly represent the hump. But Lieut. Backus has done wonderfully well, considering the dilapidated condition of the specimen from which his sketch was made. And it is possible that he hesitated to give the hump in all its grotesqueness, fearing that he might exaggerate. But on the other hand, it is quite possible that in his specimen the hump was not more marked. I have seen at the same time and place numbers of the fish with the hump in all its stages of development, from a slight elevation to a bold protuberance. And at the same season the fish vary in color from the bright silver of the fresh salmon through varying shades of tarnishing and change until the deep red, and at times purple-red hue of the dogs, is attained, and coincident with this change of color is the change of shape. It is my belief that the entire change is produced by the effect of the fresh water, and is a symptom of the disease by which, after spawning, so many of the fish die. It is so looked upon by those who, at the cannery, become very familiar with the fish. At it all dogs are rigidly tabooed; in fact, they are never brought in, for as the seines are emptied, fish by fish, into the boats, poor Indians hover near, and for the aid they render with their canoes receive all of the dogs, and even some, which of my inexperienced eyes would have passed muster, were cast out by my friend Tom McCauley, who manages the fishing branch of the cannery. The Indians claim that when smoked the dogs are better than, the clean salmon, but I can give no opinion on the subject; they depend on the dogs, which they take out in great numbers from Indian River, for their winter supply of food. I have the resources of the cannery, which I prefer, at my command. I spoke of the dogs being caught in the seines; this occurs only at the closing of the season. In early summer none are taken. Mr. McCauley has kindly supplied me with some statistics about the fish, and although in incorporating them in this letter I shall be compelled to repeat some portions of the information, as given in previous letters, I will be guilty of the tautology rather than of omission.

The fish make their first appearance in these waters about the middle of May, and about the middle of June are plentiful enough to start operations at the cannery; the "season" lasts from ten to twelve weeks. During this season Mr. McCauley has observed seven different kinds of salmon, all of which are good for canning and for the table; but two varieties which come latest are the most valuable; the flesh of these is very red and rich with oil. Each of these varieties has a distinct Russian and Indian name (which names I will spare your type-setters).

About the 1st of August the fish begin to make for the streams, and great numbers die in them. The fishing is carried on by means of seine boats, generally in pairs, the boats coming together catch sight of a school—not by seeing numbers of them jumping as I had supposed—but one or perhaps two are in the air at once, and that sometimes at considerable intervals. The Indians have a saying that "for one salmon that jumps there are a hundred in the water."

Watching till the school is evidently approaching one of the channels between the many islands, they pull rapidly for the most convenient point, on which one end of the seine is landed, and when in their judgment the school is within reach a boat pulls rapidly around its supposed locality, dropping the seine, which is perhaps a hundred fathoms long and two deep.

There are moments of anxiety as the two ends are drawn upon, but at the first sight of a fish darting across the narrowing space anxiety is at an end. The fish make no attempt to leap out. Indian boat crews buy these seines and outfits early in the season and clear their value (\$300 or \$400) before it is over.

During the last season there were packed 6,000 cases of 24-pound cans, each 144,000 pounds. The largest catch of any one day was 36,000 pounds; the greatest quantity canned, 9,000 pounds; the largest fish weighed fifty-one pounds, and the average weight was twelve pounds.

In the letter of your correspondent "C. R." from Portland, Oregon, in your issue of Oct. 30th, several species of salmon common to the coast are described so well that I recognize as Alaska visitors in the order mentioned by him the "günat," the "steel heads," the "silver fish," and the dog salmon; but for reasons given I differ with him in pronouncing this last a separate variety.

All of his salmon, though, differ in one essential point from those of Alaska. His will and ours won't, take a fly.

I have given them a faithful trial, and I have a choice assortment of the best flies.

Neither have we been able to induce any salmon, of any variety, to take any kind of bait or lure, and we have tried faithfully trolling and bait fishing—only once with success: In October a salmon ten inches long was caught on a hook baited with venison, which had been lowered for rock cod, over the ship's stern. And I have caused quite a number of "dogs" and of salmon in good condition, just taken from the sea, to be opened, and have never found a particle of food in their stomachs. Upon one occasion only have I had any evidence that they might take a hook, and that evidence was slight. While fishing in a deep pool in Saw-Mill Creek, in which a number of "dogs" were monotonously circling, Lieut. McClellan, who was fishing near me, amused himself by casting his hook, baited with roe, in front of them, but they paid no attention to it for some time. At last, though, he hooked one and it broke his line, but he is not at all sure that the fish bit. In one point only can I detect any difference between the red fish of Idaho and the dog salmon of Alaska, and that is in the season of their running up the rivers. Bendiro gives this at Wellowa Lake as beginning in July and continuing through August. In the Alaska rivers they begin to appear in September and continue till late in October.

Study of the letter of "C. R." helps me to another nice little point in natural history. He describes very correctly the salmon trout of which I have caught bushels this summer, but which in September grow very scarce, and in October disappear altogether from our streams. Coincident with our loss occurred "C. R.'s" gain, for in the streams near Portland he says they begin in September and continue through October, therefore that salmon trout migrate in the fall to the South, seems to be a fairly deducible result. But again I find a difference, or rather the difference. "C. R.'s" salmon trout take flies, ours will not, nor will ours take any kind of bait but salmon roe, and they won't touch that until it gets to the bottom, and the only way that we can tell when they do take it is by constantly jigging at the line, and if we find resistance, overcome it and put the resister in the basket. "C. R." assigns as a reason for the salmon not taking the fly in early spring, the muddiness and height of water in Columbia River and tributaries. That reason won't work here. When the creeks are at their normal height, and the water so clear that the fishes' eyes are visible, they won't touch a fly. Perhaps it's because they have sense enough to know that as there are no real flies here, anything resembling one must be a fraud.

I have one more "note" to use as a text, and then I will give over my task of reviewer. I want to say a few words in regard to the letter of Professor Gill, in your issue of Nov. 6th, and to your comments thereon. The letter of the Professor embodies the, at first sight, extraordinary statement that there actually exist little fish which are not only capable of swallowing much bigger ones than themselves, but which have been caught in *flagrante delicto*. And you receive his story with so evident an incredulity that, so far as I can find out by reading up to my latest number, the Professor has refrained from furnishing you with the additional and promised information.

Now, Mr. Editor, I detect in the Professor's letter a little evidence which convinces me that in spite of its ordinary wariness, the FOREST AND STREAM has been "sold." You didn't take notice of one qualifying phrase in the Professor's letter. I did; and in it lies the sell. I back the Professor's assertion, and I think I can in a few words induce you to admit the probability of his story, and you can then withdraw your offered prize of a fish-hook.

I will quote from the letter. He says, in describing the small or "outside" fish, that "with its stomach empty, it would have measured less than one inch in height." He omits to give the height when the stomach is not empty. I won't say *full*, for I don't believe that even the Professor knows the exact limit of elasticity of the stomach of a *Chasmodes niger*, whatever that may be, for I don't know that I know the particular fish of which he speaks by the above title; still I may have seen plenty of them. Even the explanation, "one of the *gadoidæ*," don't enlighten me much; for were he to write you a chatty letter in which reference might be casually made to the *Bernhardus-eupageris*, or the *Strongylo-centrotus-drobachiensis*, or the *Mya-arenaria*, comparatively few would recognize in the creatures the hermit crab, sea urchin and common clam; but I believe I know it. If I don't, I know one—yes, several—which I think will fill the bill. I will throw out of the question certain of the radiates which, when preparing for a good dinner on say an oyster considerably larger than themselves, protrude their stomachs, and with them outside of their bodies, envelop and digest the oyster at leisure.

There is found in the waters of the Gulf of Mexico a fish termed by sailors the "drum fish," from a sound which it emits, similar somewhat to that of a muffled drum.

This fish, by inflating its abdominal sac, becomes nearly spheroidal in shape; and when in this condition, with its stomach not empty, the height from top of back to

lower surface of belly is over two-thirds of its length.

The common tooth fish, when taken from the water, is of a normal shape, but scratch its belly and what a metamorphosis takes place. I might multiply instances, for I have seen fish in China, Japan, Africa, South America and Alaska waters whose power of swelling the stomach is so great that I could readily believe them capable of performing the feat of the professor's "gadoid." And any one who has examined the telescopic joints both at the inner angles and at the center or chin of the *Elophrus americanus* (goose fish), can see that jaws so furnished would admit of a wonderful amount of expansion.

This letter is hardly an Alaska letter, but I cannot but think that in piecing together the various items which have appeared in your columns, I have served your paper equally as well as though I had described to you in the orthodox manner, "struggles of speckled beauties."

PISCOC.

A DUCK STORY FOR "PISCOC."

CHELSEA, MASS., Feb. 14th.

Reading the spicy letter of your correspondent, "Piscoc," last evening, recalled to my mind my first duck in South Carolina. In the spring of 1863, a boy of fifteen years, I found myself in the service of Uncle Sam. I held (when not being punished for some boyish prank) the responsible but not lucrative position of messenger boy on board the iron-clad monitor *Nantuxet*, just arrived in Port Royal harbor. Going on deck the first morning I was surprised and delighted to see the number of wild fowl in the harbor. One large flock in particular, about four hundred yards to windward of us, drew my attention as I saw a small sail-boat maneuvering to get within range of it. After a while the occupant of the boat concluding he was near enough, "let go" both barrels, killing three birds instantly and badly wounding another who flew straight at our ship, dropping in the water at about fifty yards to windward. I was intensely excited at this, for I had been an enthusiastic sportsman at home, where I had left a fine double-barrel and a knowing young spaniel. Grasping a few pieces of coal lying on deck I immediately opened fire, and at the third or fourth shot hit the duck on the head, turning him over on his back; when as he floated past the ship I secured my prize. What to do with it now that I had secured it was a problem. I was no favorite with the sable genius who presided over the ship's galley, and without his permission how was I to cook it? While pondering over my dilemma, the lieutenant passing said, "S., what have you there?" "A wood-duck, sir, won't you accept it?" For I wanted some one to get the benefit of my shot. "Thank you!" said he. Turning to the steward, "Steward, have this cooked for my breakfast to-morrow." "Yas-sar," was the reply, and the duck was faithfully and scientifically done. Our navigating officer was a bluff "old skipper" from the merchant service, who also acted as caterer of the ward-room mess. Now, among our officers was a young ensign named Starr, who always insisted that the caterer had reserved sundry dainties upon which he was in the habit of lunching during the long hours of the mid-watch, and as fate would have it, this night in particular he was determined to find the secret store of goodies. During his watch that night he cautiously rummaged the ward-room pantry and was rewarded by finding a nice lunch covered by a platter. Taking it on deck he proceeded to demolish the same, mumbling his elation between the mouthfuls. So pleased was he with his joke on the caterer that the next morning he related the story to the whole mess. Shortly after, at breakfast, the lieutenant, with a smile that was child-like and bland, said to the ensign: "Steward, bring on my duck." The platter was brought and uncovered by the steward, who turned almost white with horror on finding nothing but a small lot of well-picked bones. The smile faded from the lieutenant's face; a frown began to gather, when, happening to catch the eye of the ensign, he remembered the story of the midnight forage. The whole mess saw the point at once, and such a shout of laughter followed that long, yea, the ensign himself, who the gallant lieutenant had signed himself "Piscoc," and writes entertaining letters from "Sitka," if this should catch his eye and he remembers what "tremendous grins" distorted the visages of the foremast hands, this will inform him that the said grins were caused by the ward-room steward relating this story to a select circle of "old shellbacks" around the smoke-stack that evening.

H. A. S.

GAME PROTECTION.

MIGRATORY QUAIL IN PENNSYLVANIA.—*Northumberland, Pa., Feb. 24th.*—About the middle of the season a covey of five migratory quail was seen three miles from this place. Although it is contrary to their habits to remain here over winter, yet this season has been a very open one, and they might not have migrated in the fall. They were seen in the early part of the season by the gentleman who located them in the spring about the same place. Our informant is a sportsman, and reliable, yet he had not an opportunity to examine the migratory quail closely. He describes them as being much smaller than our native quail, and very swift flyers. We located six pair here last spring, but not much was heard of them, as we did not look after or try to disturb them.

J. H. E.

BOSTON'S FAMOUS WOODCOCK.—*Boston, Feb. 24th.*—Several months since, at the instigation of the Society for the Protection of Game, was instituted a complaint against Hall & Whipple, proprietors of Young's Hotel, for having in their possession woodcock within the season prohibited by section 1 of chapter 209 of the General Statutes. It appeared in evidence that the defendants served a woodcock to a guest and received payment therefor, and it also appeared that said woodcock was not his or theirs or caught within the limits of the Commonwealth of Massachusetts, but was taken, caught or killed in the State of Pennsylvania, at a season and time when it was lawful by the law of that State to take, catch or

kill woodcock, and was dead when brought into this Commonwealth. On this ground the defendants asked the court to direct a verdict of not guilty; and further asked the Court to rule that the defendants had not committed any offense under the laws of the Commonwealth. But the Court declined so to rule, and instructed the jury as matter of law, that the defendants were liable under the statute aforesaid, and directed a verdict of guilty.

The defendants excepted and the case was argued before the full bench of the Supreme Court, which to-day sent down the following rescript:

Exception sustained. Verdict set aside and a new trial ordered. The defendants are not punishable under the statute 1789, c. 200, for having in their possession, offering for sale and selling a woodcock which is admitted to have been lawfully taken or killed in another State.

This is the loophole of the law, through which innumerable woodcock may pass despite the earnest work of the Society's officers.

THE NEW JERSEY LAW.—*Morrisstown, March 1st.*—*Editor Forest and Stream.*—I notice in your issue of Feb. 26th, the communications of two gentlemen replying to my letter on the New Jersey Game Law. A careful perusal of these letters fails to reveal to me where the views of your correspondents differ materially from mine. "Fair Play," in his letter, says: "Of the half-dozen bills before the Legislature, there is but one that deserves consideration, and that is Senator Beckman's bill, prohibiting the shooting of game birds and rabbits from Jan. 1st to Dec. 1st." If "Fair Play" gives the woodcock a place on the list of game birds, then he would carry the abolition of summer shooting beyond anything I had contemplated. But the inhabitants of the northern counties would be left out in the cold, both figuratively and literally, were the killing of woodcock prohibited until Dec. 1st, or even Nov. 15th. In most winters we are blessed with an abundance of "beautiful snow" long before Dec. 1st, so that if any woodcock had the courage to stay through one of our storms, it would not afford much pleasure to wade through snow-drifts in pursuit of the festive timber-doodle. And yet "Fair Play" cries against "one section of the State attempting to legislate in their own interest and against another section."

Your other correspondent, "W," agrees with me in every particular, for he writes: "If 'Jersey' can prevail on Senator Lawrence to have this old law repealed, I have no doubt that he will find very little opposition to his bill." As you have stated, it is entirely unnecessary to take any such measures, as the old law referred to was repealed by the act of 1874. JERSEY.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl. "Bay birds" generally, including various species of plover, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets, etc., coming under the group *Littorale* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—Ducks are now flying at Good Ground, L. I. Don't miss them.

A BED FOR THE CAMP.—*Warsaw, Ind., Feb. 23d.*—I am an old camper, and have experimented in many ways, and through many contrivances, to obtain a comfortable night's rest in camp, but as yet have not succeeded. I would be pleased to have some of your correspondents suggest a bed that can be carried in a small compass, yet strong and comfortable.

H. Z.

The camp lounge, advertised elsewhere, is well spoken of by those who have tested its merits. The hammock is also a comfortable bed after one becomes accustomed to it. Some campers simply provide themselves with a huge bag of cotton flannel, or in cold weather, of duck, lined with wool, into which they crawl, and then lie down on the softest spot on the ground. This is particularly convenient for horseback travelers, being light and compact, and serving as well for saddle-bags. As a bed, it keeps out vermin and cold at the same time. There are many forms of home-made beds and bedsteads for use in the camp. One can readily construct a light framework, which may be carried in a compact bundle and put together in the woods. The bed in these should be of canvas or duck. One of the simplest things of the kind ever coming to our notice was a sheet of canvas six feet square, folded over and sewed together along two of the edges, forming a bag six feet long, three feet broad and open at both ends. Through this were run two poles, which rested at either end on logs or in forked stakes. This formed a cot; and if greater warmth or softness were desired, the bag was used as a mattress and filled with moss or leaves. A camp bed is largely the result of individual ingenuity; perhaps some of our readers will comply with the above request, and describe the beds used by themselves.

NEW GUNS.—We have been permitted to examine some samples of new guns sent to Mr. Henry C. Squires, of Cortlandt street, by W. Greener. The first is a new gun, of which Mr. Squires is sole agent for the United States, called "The Club Gun," which name is en-

graved upon the rib, and is to be also put upon the heel-plate. Mr. Greener will maintain in these guns the reputation which he has established as a first-class maker, if the one we saw was a sample. It has the favorite top-action, double bolt and extension rib, pistol grip and patent fore-end, and the hammers, when cocked, are entirely below the line of sight. The barrels are laminated steel, perfectly straight so far as can be seen with the eye, and choked on the best principle, and it is represented as being an excellent shooter. What pleases us greatly is the balance of the gun, not being, as are so many choke-bored of inferior make, top or muzzle-heavy. The price is fixed at \$85, bringing it within the means of the masses, and must be based on large anticipated sales. The next gun is the Treble-wedge Fast, with hammer, having Mr. Greener's cross-bolt, which he claims as the strongest action made. There is nothing special to note in this gun, further than that the piece is much lower than ever before advertised in our columns. The gun that interested us most was the Hammerless Breach-loader, and we are glad to know that these guns are now brought down to a price where they interest a large mass of sportsmen who have not felt like investing what has seemed like a fancy price in a gun. This subject of hammerless guns is becoming of so much interest to sportsmen that we purpose shortly giving some further attention to the subject. In England the hammerless is fast superseding all other kinds, and all the principal makers are now building them, applying to them their own system of action, etc., and so far we have been unable to learn of any dissatisfaction being expressed with them when brought to a practical test. We would be glad to hear from those now using them, as to whether they find any serious objections, and how they could be further perfected, as we are well satisfied, from their simplicity and strength, and the rapidity with which they can be fired, that they are the coming gun, or, as Mr. Greener states it, "the gun of the future."

NEW YORK.—*Lowville, Feb. 19th.*—I recently received a fine large raven (*Corvus corax*) killed while flying over Round Pond at Stillwater, Beaver River, by one of Dunlap's guides. Last week I got a very nice dark otter, *Lutra canadensis*, shot by John Beach at Bear Mill on Bush Kill. Both of these specimens I have added to my collection. By the way, Beach said that he set two traps in a spring, and a mink got in one and the otter in the other. The otter laid all the blame on the mink and tore him all to pieces in his rage. Pretty good success for an amateur trapper. H. W. HAYT.

NEW YORK.—*Hornellsville, March 1st.*—A woodchuck was killed here Feb. 19th. A large panther has been seen several times within the last two weeks at Canaseraga, ten miles from here. J. O. F.

FIRST SNIPER.—*Philadelphia, Pa., Feb. 28th.*—Yesterday Mr. James Adams shot (as far as we can ascertain) the first snipe of the season. He took his old bitch and young dog Ben for a stroll down the meadow, taking his gun along. When he arrived on the meadows off South Street, below the Greenwich railroad, Ben came to a stand, with the bitch—the mother of Ben—backing him. Mr. Adams at first did not think the dog was standing a bird, but when he found the bitch backing he took another view of the matter, got himself in working order, and flushed a very fine bird, killing it. The bitch retrieved the dead bird. This is the first snipe the dog ever saw, and Mr. Adams is more than proud of his dog, which promises to be a good one, as it is only just a year old. C.

SCOTTDALÉ SPORTSMEN'S ASSOCIATION.—*Scottdale, Pa., Feb. 24th.*—We have organized an association at this place to be known as the "Scottdale Sportsmen's Association," organized on Feb. 17th, with B. B. Orr as President; B. F. Hubbs, Secretary; J. W. Arnhold, Treasurer; S. K. Dunkle, Jno. Wright, E. A. McConn, Thos. Baily and W. N. Porter, as Directors. Our association bids fair to prove successful, having taken in twenty-two members on the 19th inst. We are located within fifty miles of the Allegheny Mountains, and within ten miles of the Allegheny River, five miles distant, is well stocked with black bass and salmon. A great many deer and turkey are killed on the Alleghenys and Laurel Hill, also some fine black bears. Grouse and quail are wonderfully plenty in the immediate neighborhood. B. F. H.

DELAWARE QUAIL SHOOTING.—*Philadelphia, Pa.*—Georgetown, Delaware, is a good point to gun for quail. It is reached from Philadelphia by P. W. & B. R.R. and from New York by the O. D. S.S. Co. Quail season begins Nov. 1st and expires Feb. 15th. Brick Hotel; first-class accommodation, with teams if desired. I have been going every season for past fifteen years. EDWARD MAHER.

TEXAS.—*Galveston, Feb. 14th.*—On account of scarcity of rain the shooting has not been as good as usual this season. Ducks are not abundant, and jack-snipe scarce. C. C. P.

INDIANA.—*Washington, Feb. 25th.*—Hunting in this vicinity has been very slim this winter. Quail all froze out last winter. Dr. Hamed and W. D. Bynum, of this city, went about seven miles west of this place, one day last week, and succeeded in bagging twelve ducks. Dr. Jones, Dr. Lacy and W. D. Bynum have sniped three new breach-loading shot guns. We are having a very mild winter, and several of our fishermen went out one day this week and captured fourteen bass.

M. B. RILEY.

WYOMING SHOOTING CLUB PRESENTATION.—*Cincinnati, Feb. 28th.*—Among the clubs in this vicinity the Wyoming Shooting Club stands at the head for real enterprise. Whether individually or collectively, this club is not excelled at the trap or in the field. Of all the twenty-five members there is none more enthusiastic and no one held in higher esteem by his fellows than the Rev. Jos. Gamble, of the Wyoming Presbyterian Church. Possessed of good social qualities, excellent pulpit abilities, and a full share of good common sense, he combines all these with a great love for the rod and gun, the field and the stream, making him one of the truest of true sportsmen. After a residence of eight years in his

present location, he now leaves a host of friends and removes to Plattsburg, N. Y. A few evenings since, some of his companions in the field met him at the residence of Edw. Mitchell, Esq., and were most royally entertained by Mr. Mitchell, than whom no more clever sportsman even could be desired. A glorious supper was provided, to which the forest, field and stream had paid liberal tribute, after which an elegant repeating rifle was presented to Mr. Gamble, as a token of remembrance from the little company of friends present. The presentation speech was made by Hon. Judge Harmon, who, being an expert with the rifle, aimed directly at the heart and made a "good clean hit." Mr. Gamble, taken entirely by surprise, actually started, and, without further extending a hearty invitation to visit him in his new home, where his friends would always find the "latch-string" on the outside. The hours went swiftly by as many happy experiences in the field were related, and as the good man's friends reluctantly said farewell, it was with the wish that his good example and influence might be felt in the new friendships he will form as they have been in those he leaves behind, and all expressed the hope that they might often meet again in the forest and in the field and hear the familiar music of his faithful "Parker" and the echoing crack of his handsome new rifle.

I mention this incident as encouraging to those who are interested in the elevation of those pleasures in which the true sportsman finds so much enjoyment. Few ministers of the Gospel know anything practically of the pleasures and benefits, physically or mentally, they would gain by engaging in active exercise with the rod and gun. This lack of knowledge is accounted for to some extent from the fact that in the minds of many good people there is a prejudice against ministers engaging in such sports, which is caused by the abuse of these sports by many who are not true sportsmen. The influence of a club conducted on correct principles does much towards destroying this prejudice against the most healthful of all recreations. Just such a club is the largest shooting club in this locality, whose meetings and public matches are attended by ladies and gentlemen who neither see nor hear anything in the least objectionable. There are many such clubs now, and the number is rapidly increasing, as there seems to be a growing interest in that direction among professional and business men who realize the need of some healthful recreation. WALLACE.

RECOIL PADS.—While the subject of recoil pads is up, I want to say a word in indorsement of what you have said of Ritzman's pad. It is a very ingenious and tasteful contrivance, and a great comfort to one who shoots heavy charges. I am using one on a 7-gauge single-barrel gun, weighing 7½ pounds, with 70s. B. G. powder and 1½ ounces shot. The recoil, even of so light a gun, is not unpleasant, while the power is unmistakable. At 60 yards, a shot goes through seasoned inch pine boards like bullets, and goes so that get in the way far pretty much like the boards. Without the pad I would not like to use over 50s. powder with it. I get execution that I never got from a gun before. The pad can be removed from my goose gun to my 12-gauge, and a moment's use either equally well. Gunners that need a pad for recoil need not fear a mistake in getting this. BOONE.

PATTERN AND PENETRATION.

QUEBEC, Feb. 24th.

Editor Forest and Stream.—

I see many persons in your columns giving their experience in the shooting of their guns. Some are better; some are worse; but all of them give only the particular gun they use themselves. In the subjoined table you will find some trials that I have made myself, and with different guns of various gauges, and I think you will find I think they will come favorably with any that I have seen in your paper. I may say that all the guns had one or both barrels full choked, some of them one barrel medium. This can be seen by the targets. I was most particular in all my trials to give every gun an equal chance. The gun was wiped out after every shot, so that every one was clean for a second trial. I used No. 7 Canada soft shot, 12½ lbs. to charge, and I used No. 10 allow me to say that there was a vast and unexplained difference between the size of Canadian shot and the same number made in the States. In the columns of your paper some time ago you gave the number of pellets to the ounce of American shot as 270 to 280, according to the maker, or, in other words, from 347 to 362 grains to the charge of 14 ounces. In 14 ounces of Canadian shot there were, by actual count, 495 pellets, or 370 pellets to the ounce. Of this I am positive, as I was struck by the great difference, and I opened several new bags of this size as it came from the manufacturer, to see if there was any difference in that way, but found none. I then weighed my ounce on a fine postal balance, that would balance by a pellet, then counted it, and in every case I was within two or three pellets of the same number—370 pellets. This difference in the number of pellets will account, or what are seemingly very large targets, according to American standard of number of pellets to charge. I used a fine quality of rifle powder made by the Windsor Mills Powder Company, near Montreal—a powder that burned quick and moist. It was rather coarse grain, and I used 4 drachms, weighing in every instance 27½ grains to the drachm.

I used the Rogers No. 2000 clip target, at forty yards measured in the air. To try the penetration I used boards cut from dry spruce, one-quarter inch thick, placed solidly one behind the other, one inch apart. On some of the days of trial it was rather windy, but taking everything into consideration all the trials were about equal in this respect.

The shots were fired two at each pair of targets, and the targets marked and altered for reference. These targets I kept, and can show them if required. Nearly all the guns were of different quality, and in the English list, with the exception of one, all were of very high quality. These guns were actually tried by myself, and I could have increased the number of makers, but did not think the guns I could have got suitable for the purpose, as some of them were cylinder bore, and it would be absurd to pit them against the smooth-bore in a trial of targeting. All the shots were loaded with one hard and one Fly pink-edge wad over powder and one

WEST END CLUB.—*Mt. Pleasant Club, D. C., Feb. 23.*—A very large party of gentlemen gathered by invitation at the shooting-grounds of the West End Club to witness the pigeon and glass-ball

Sept. 25, at Beaver- ton. {Whitby..... 57 {Beaver-ton..... 81	80 81	137 142
Won by 56 runs.		
Oct. 3d, at Whitby. {Whitby..... 65 {Whitby..... 57	65 57	221 142

Lost by 21 runs.
A very closely contested match, where there was a fine exhibition of good cricket. For the victors, Mathewson and H. Laing bowled well.

ANSWER TO "A MEMBER OF MANY CLUBS."—New York, Feb. 21st.—The contribution to your issue of Feb. 19th, by "A Member of Many Clubs," was written by a gentleman who evidently leans rather to the interests of Christianity than of cricket. This may be quite unintentional on his part, but it would nevertheless seem to be the fact. He desires to do away with strife of any kind. He would have the Staten Island Cricket Club act as a sort of protector to the kindred organizations in the vicinity of New York, and act "to have its friends" and "to debate whether the late amendment of that club's Constitution was passed with a view to a reform which prohibited its members from playing against it, even though they are older members of other organizations."

In the first place, the Staten Island Cricket Club was not organized for the purpose of saving its friends, its object in this respect being, and having always been, to take care of itself. It has found the task a difficult one enough, accompanied as it has been with all the drawbacks which usually attend a new enterprise. The "Member of Many Clubs" rather takes it for granted that the kindred organizations in the vicinity are in a state of beggary and must need fall back upon outside resources to support existence. We must confess this state of affairs is novel to us.

However the fact may be now, the records of matches for the last three seasons have shown such a condition of affairs that the "kindred organizations" have come in for their share of the spoils and of victory equally with the Staten Island Club.

The Staten Island Cricket Club has always been in the main opposed to reviving; and whenever it was disbanded, and got along with its own exclusive members, it has generally done so. The present flourishing condition of that club is due to the vigorous exertions its own members have made to secure attractive grounds, an increase of membership, and a capable professional. It has now a list of members which seems to guarantee that in the future its elevens can be made up from its own members; it thinks that it is to the interest of cricket that some rule should exist prohibiting a pooling of New York clubs, and it has passed the amendment referred to for this purpose. It club by its own need and inactivity has allowed itself to run down to the level of stagnation, the course for it to adopt is the course which every new club has before it, and that course is to set to work and exert a vigorous activity and interest. By such means success is certain to result. Let the custom once be recognized of getting a club's bone and sinew from the ranks of some other club, and it will invariably make up its elevens from such sources, and never rely upon its own recruits.

Cricket matches are the most exciting and engaging uses or applications of cricket. Most men in practice study skill to the end that it may serve them and their club on match days. Every man attaches most value to that which is exclusively his own, and will make the greatest sacrifices to obtain it. This rule holds good in all human affairs, and so it with clubs. A victory secured without any aid from outside sources, is what a club enjoys beyond anything else. Such a practice infuses vigor in each member of the eleven, and they all work together as one man to one purpose, and give their best individual and collective work. Destroy this sense of exclusive ownership and individuality by an interchange of members, and you destroy one of the chief incentives to the perfection and success of cricket.

We are informed the Staten Island Club had this end solely in view by the passage of their amendment to their Constitution prohibiting reviving.

CRICKET.
MONTREAL CRICKET CLUB.—Mr. F. Stancil, Secretary of the M.C.C. writes that his club is not to be disbanded, and that the prospect for the coming season is better than they have been for a long time. We are heartily glad to hear this good news, and wish the old Montreal Club a successful year. It is their turn to visit New York, and we will give them a warm welcome whenever they may come.

Yachting and Canoeing.

NATIONAL YACHTING ASSOCIATION.

A VERY harmonious meeting was held March 1st in the parlors of the St. Denis Hotel, at which the following clubs were represented: San Francisco, Buffalo, New Jersey, Jersey City, Salem, Me., Columbia, Empire, Hudson River, Yonkers, New Bedford, Cleveland, Williamsburg, East River Yacht Club, National Y. C. of Jersey City, Oshkosh, Albany, Portland, Me., and Chicago—eighteen in all.

An organization was effected with Vice-Commodore W. H. Dilworth, N. J. Y. C., as President; John Erick, Columbia, N. Y. C., as Secretary; and Theodore W. Ten, N. Y. C., as Treasurer. Mr. Mansfield, Salem Bay Y. C., and Charles G. Yale, San Francisco Y. C., as Assistant Secretaries. After general discussion a constitution was adopted, and ordered to be sent to all the clubs participating for

ratification. It was also determined to elect an Executive Committee of thirteen by ballot of the clubs as a working body, to draw up a code of by-laws, sailing rules, etc., and the annual club dues were fixed at \$15. Clubs were requested to contribute \$3. each to cover the necessary printing of the constitution for circulation among them, and other expenses. After ratification of the constitution further steps will be taken to perfect details at the next meeting, to be held in New York the second Wednesday in April.

The letter of introduction from the San Francisco Y. C. was received with considerable acclamation. The request of the Albany Y. C. for the adoption of a national burgee was favorably received, and will be referred to the Executive Committee for action; and the letter from the Cleveland Y. C. in relation to granting the full privileges of a yacht's license to craft under twenty tons, will be sent to all clubs for signatures and united action.

Clubs can still join the Association on the same terms as those already participating until the constitution has been finally adopted, when their admission will, of course, be subject to a vote of the Association.

YACHTING NEWS.

SHAWANAKA YACHT CLUB.—An important meeting of this club took place at Delmonico's March 1st, Commodore W. A. W. Stewart presiding. The following members were added to the club: Messrs. W. Howard Mitchell, John A. Stewart, Jr., Edward P. Mitchell, Charles B. Jenkins, Roger M. Sherman and Sidney V. Stratton. The resignation of Mr. John R. Waller was accepted with regrets. The sum of \$2,150 was appropriated for the club fixtures of the year as under:—

First Event—Monday, May 31st (Decoration Day), opening cruise of the club, at 10.30 A.M., from Tompkinsville, Staten Island, round the Southwest Spit buoy to Gravesend Bay, where the friends of the club will be entertained at dinner at some convenient hotel.

Second Event—The Corinthian race, Saturday, June 12th, for second-class schooners, and first, second, third and fourth-class sloops; the prizes to be \$100 to the winning schooner, \$100 to winning sloops of the first and second class, \$55 to the winner of the third, and \$55 to the winner of the fourth class, with individual prizes of \$5 to each man in the winning yachts.

Third Event—The Corinthian cruise, to begin on Sunday in July as the Commodore may hereafter see fit. The usual Fourth of July race at Outer Bay is to be omitted this year, and a race at the end of the cruise substituted.

To the open matches it was decided to admit only yachts of the New York, Atlantic, Eastern and New Bedford Yacht Clubs. It was also resolved that sailing masters, cooks and stewards should keep below decks during Corinthian races, and that pilots should not be carried. The club has adopted a rubber button in place of the brass or gilt ones on the uniform, and a new cap after the pattern of the English naval service. On the Corinthian cruise only working topsails to be allowed, and no hoisting out poles except regular spinnaker-booms. The most important resolution was offered by Henry-Commodore Schuyler, creating a prize for seamanship during the annual cruise, on a basis similar to that adopted by the San Francisco Y. C., and advocated in these columns.

ROYAL NOVA SCOTIA Y. S.—The squadron sailed eleven races during 1879, with sixty-eight entries and fifty-eight starters and nineteen prizes. Of these twelve were procured by the Squadron, one by the Vice-Commodore, Rear Commodore and Hon. Secretary; three by the Hon. Secretary, one by Mayor Tobin, of Halifax, and two by the officers of the Royal Artillery and Royal Engineers stationed at Halifax. The Squadron now has thirty-eight yachts on the list, and new ones will be added this season.

OSHKOSH YACHT CLUB.—Editor Forest and Stream.—At a meeting of the O. Y. C. to take some action in reference to a communication from the National Yachting Association, to be held in New York in March next, the following delegates were elected to represent the O. Y. C., viz: Commodore George W. Burnell, Frank Hellig and George M. Hasbrouck.

The election of George M. Hasbrouck Secretary, in place of F. J. Clark, removed from the State, was conceded to be a good choice. All communications addressed to him will receive prompt attention.

We also organized what is to be known as the "Sportsman's Association," to prohibit the wholesale slaughter of fish and game in this section of the country. Officers: C. W. Raker, President; A. W. Weisbrod, Secretary; H. B. Harshaw, Treasurer.

C. C. M.
NAUTILUS YACHT CLUB.—At Salem, Mass., a new yacht club, has been formed called the "Nautilus Yacht Club," and the following officers have been elected for the ensuing year:—Commodore, J. W. Dodge; Vice-Commodore, J. Remon, Jr.; Fleet Captain, Snow Rich; Measurer, A. J. Friesbe; Secretary and Treasurer, Frederick Cate. The club has already a membership of forty, and has about six or seven boats entered, including some of the fastest yachts in the vicinity. There are six boats building for members of the club.

F. C.
CRUISE OF THE IBERIA.—Mr. Ashbury, formerly owner of *Cambria* and *Lionia*, has been doing some extensive cruising in the 30-ton yacht *Iberia*, having visited the coast of Brazil in her. She arrived at Portsmouth, England, Feb. 23, thirty-three days from Barbados. The passage was very stormy, but the yawl behaved exceedingly well, and was not once holed, although she passed ships that were lying to under lower topsails.

NEW YACHTS.—Besides the large 55-ton sloop noticed in these columns, Cathbert, of Trenton, is lengthening the 10-ton yawl *Surprise*, building a 10-ton yawl for Capt. Murray and Mr. Duggan, and a steam yacht, 40ft. long, for S. Stevenson, of Brookville.

THE BRITISH YACHT FLEET.—The value of British yachts is estimated at \$20,000,000, including only those over five tons. Smaller craft are classed as sail-boats only. The fleet gives employment to 5,000 sailors.

AN OLD STAGER.—There is hauled up at the foot of K street, South Boston, the old schooner *Bull Dog* of Charlestown, built in 1810. This craft has the original planking put on when she was built. She is well preserved, and likely to last many years yet. Those who should know say she is very fast and weatherly.—*Boston Herald.*

EXPERIENCES WITH BALLAST.—When the Boston sloop *Ed* was launched she had all inside ballast. Next season about 1,500 pounds of iron were placed on her keel, and her performances were considered much improved. The third season lead was substituted for iron, and she excelled her previous record, especially in heavy weather. No theory about this.

THE LAST OF A CRACK.—The famous *Undine*, sunk by collision with a steamer in Boston Harbor last summer, has been hauled

out, and will be knocked down to the highest bidder March 13th. The steamboat company paid all damages, and Mr. Bryant will probably buy.

ADRIE VOORHIS.—Lots of them are coming to it. This well-known sloop is to have her spars cut down, and will receive a cruising suit from Crutes' loft in Boston. The *Lillie*, Messrs. Dillingham & Band, follows in the same line. Once rid our sloops of their excessive smooth-water spars, and their speed is gone. Then we will take to a more moderate model, which can be driven fast under a sensible rig. With a reasonable rig our present vessels are really slow; it is only by oversteering that they make them go, and when this fact becomes known we expect to see improvements made in form with a view to reducing resistance, and not altogether in the direction of excessive stability, consequently cutting down to cruising dimensions—in other words, to what a vessel can carry—no welcome as a step that is sure to lead to a commendable modification in model.

IDLER AND CAMBRIA.—In taking a lay monthly contemporary to task for some harmless "spread-angelsim," the London *Idler* has the following:—

"By the way, the *Cambria* in 1870 sailed a match against the *Idler* round Hook Island, buoy and back in a fine breeze—the only real breeze the *Cambria* had during any of her matches in America—and in a turn of twenty miles to windward *Cambria* beat *Idler* nineteen minutes. The *Idler* carried away her boats, but at the time the *Cambria* was so far to windward that practically the result was not affected by the accident. The *Cambria* beat the *Idler* four or five times altogether, and *Idler* beat *Cambria* twice in light wind. At any rate *Idler* must at present be a different ship from what she was in 1870 if she can show "*Idler*" on her stern to the English yachts all round the coast at the next squadron regatta. We should like to see what the *Idler* would do with water in a twenty miles thrash to windward in a breeze that would make the former house both her upper sticks. If we have a tearing westerly breeze, like that in the match round the Wight last season, we should expect to see *Cecilia*, *Egeria*, *Miranda* and *Scabelle* bearing up round the Needles, while *Idler* would be still jumping at sea off St. Catherine's. Perhaps after all it is not the *Idler* of 1870 that the English yachts will have to class round the Cowes course in 1880."

The *Idler* has been altered considerably since 1870; she has been lengthened and "deepened" and now has a dash deck. Her sailing powers have been materially improved, but she is probably no faster than in 1870, when she ranked as one of the best in the west. We certainly think there are several schooners in England which in a lump she would give *Idler* a severe drubbing, though in turning to windward in moderate weather *Idler* might turn the tables, especially if there is much lee-going tide. The dimensions of *Idler* are 106 ft. over all; 97 ft. water-line; 22.5 ft. beam, with 9 ft. 10 in. draft without center-board. Built by Sam'l Poole, of Fairhaven, Conn., in 1865, and altered by Henry Steers, of Greenpoint, in 1874. Sailed by J. M. Sawyer. Draft with board down about 18 ft. Is one of the *Miwah* type of schooners we have, and is now owned by Mr. Fisher, of Chicago.

CONGRESS AND STEAM YACHTS.—The *Scientific American* very truly remarks:—"In his report for 1879 the Superintending Inspector General of Steam Vessels took notice of the excessive license fees for steam yachts and other small vessels using steam power, and suggested that a charge of \$5 would be enough for the annual inspection of such craft."

"The objection to the present fee of \$35 is two-fold; it is out of proportion to the size and importance of the vessels paying the license, being as much as is charged for steamers of 100 tons burden, and it is practically prohibitory to a large class of men who would otherwise build and use such vessels for pleasure or profit."

"It is gratifying to note that a bill has been introduced in Congress to carry out the Inspector General's recommendation. Its passage would be altogether beneficial."

With the exception of Herreshoff's experiments we have been almost at a standstill in America, while England has developed the Willan's three-cylinder, the Wiggall & Halscy rotary, the Perkins and other radical innovations and improvements, and notably the efficiency of high speed engines of the common loco, motive slide-valve type, as in the Thorneycraft launches.

SANDY HOOK LIGHT.—Notice has been given by the Light-house Board that in consequence of the encroachment of the sea upon the site of the present light-house known as East Boscon Light, Sandy Hook, the light will be exhibited on and after March 15th from the iron tower recently erected on the site occupied as the East Beacon in 1850, and which is situated 375 feet from the present light-house structure, in a course bearing south by east from it. The new tower is of cast-iron and is painted red. The lantern is painted black. The light will stand forty-two feet above the base of the tower and forty-six feet above mean sea-level.

STILL ANOTHER—REAR COM. Sumner, J. N. S. Y. S., will hoist his pennant aboard a fine new 23-ton cutter about the middle of June. She is now building in Halifax, iron ballast inside and on keel.

YACHT CLUBS IN FRANCE.—The recent annual report of the Yacht Club de France shows on its books 145 yachts, with an aggregate tonnage of 8,432, or an average of 57 tons to each yacht. The amount of prize money offered by the club to racing associations under its auspices was \$3,400. This is certainly not a bad exhibit. There are now twenty-eight regular clubs in France, besides some forty regatta associations.

PROVISIONS RUN SHORT.—The two venturesome individuals from codfish latitudes, Burrill and Coombs, who left Boston July 9th last year in a whaleboat of about one and a quarter tons, brought up by steamer in New York. They left out in the little *Cotton Ship* (intending to reach Australia in time for the Melbourne Exhibition. Everything went well until they quit Port St. Jago, Cape Verde Islands, which they had made in forty-eight days. Rough weather was met, but the tiny craft seems to have performed well enough, and the voyage might have been accomplished had it not been for carelessness in stowing the provisions, which were all spoiled by the sea and had to be tossed overboard. They tried for St. Helena, but were driven to leeward and were almost exhausted for want of food, but their help up and made an island off the coast of Brazil, where they recruited for a while among the fishermen and then sailed for Bahia and returned to this city by mail steamer. Both men are in full health and see no reason why a small boat, properly loaded and fitted, cannot go to sea as well as a ship.

UNION REGATTAS IN BOSTON.—The necessity for a National Yachting Association is shown by the following call to Boston yacht clubs:—

"DORCHESTER YACHT CLUB,
"CLUB HOUSE, HARRISON SQUARE,
"ROXBURY, February, 1880.

"DEAR SIR: A committee has been appointed by the Dorchester Yacht Club to confer with committees of the other neighboring clubs, who shall see fit, for the purpose of drawing up a uni-

form set of sailing regulations and system of measurement for time allowance, under which union regattas are to be sailed.

"We do not desire that the clubs commit themselves now to adopt any particular set of rules, but think the proposed Association should result in a set of regulations which it will be for the full advantage of all to adhere to.

"Hoping to hear from you as soon as convenient, we remain yours truly,

"FRANK E. PRABODY, Chairman.

"COULDGE BARNARD,

"GEORGE S. RICE,

"HARRY S. MANX,

"Committee of D. Y. C.

"P. S.—Please send answer to B. Barnard, Harrison Square, Boston."

"THE FAHNE.—Mr. Bryant, of Boston, has bought the large slop *Fannie* (built up in Cowan's Basin), built at Mystic by Richmond in 1871. She is 32ft. deck, 63 ft. l., 25ft. 9in. beam, 6ft. 9in. hold, 14ft draft with board, 5ft. without.

"THE MINOR.—This little slop" has been hauled out at Pierpont yard in Greenpoint, and will be altered into a keel, Boston fashion.

"THE CABIN LOCKER.—To remove old paint: Slack three pounds of fine quick-lime in water and one pound American pearl ash, as thick as paint; apply with an old brush and let it remain for twelve or fourteen hours, when the paint will peel off easily. Black varnish: Two pounds gum shellac, two pounds unad, one gallon linseed oil and one-quarter pound of lamp black; boil together for four hours over a slow fire. Painting: A gallon of mixture, or say six pints raw flaxseed oil, one pint boiled oil, and one pint turpentine; requires from twelve to fourteen pounds of dry paint. On woodwork a gallon of paint will cover from 600 square feet, one from about 700. Brushes: Spanish white and black oil well beaten and kneaded into a stiff paste. Lacquer for brasswork: Eight ounces of shellac and one gallon of spirits of wine.

"THE DIFFERENCE.—A little so-called nautical journal of the day variety has been making the rounds of our advertisers of late misrepresenting this journal, and spinning correspondingly inflated mendacity in its own behalf. The facts in the case are these: The sheet in question has only recently emerged from dishonorable bankruptcy; has notes outstanding; is shirking its liabilities under the lee of petticoats; never had a paying circulation, in its most prosperous days, of one thousand, and now has nearly much less. If, with these facts before them, and our previous caution to throw money into the gutter by giving the petty sheet aluded to their support, is none of our concern, but we propose to see that they do so with their eyes open. A comparison of our columns with those of the fraudulent pretender will save our advertisers from falling into his clutches. The 'longshore sheet' must seek its victims in other channels; its character is too well known in this latitude, and its unscrupulous mendacity will be exposed in these columns for the benefit of the public. Further particulars can be had on application.

"MEASUREMENT.—An Eastern yachtsman writes as follows concerning our recent article on measurement:—"Allow me to congratulate you upon your last article on measurement. It goes right to the point. It is timely and will serve to clear away much of the ignorance which has prevented a proper understanding of the subject heretofore. It establishes a foundation and gives us an authority upon which we can proceed in our future consideration of the subject." Owing to press on our columns further material on this head has been postponed.

"MEASUREMENT IN FRANCE.—It is to the credit of our French cousins that they are restive under the infliction of the old Thames rule and that they refuse to accept it in good grace any longer. The Yacht Club de France has taken the bull by the horns, and others are proposing a congress to settle the vexed question. We commend to their consideration the five axioms given up in an article in our last issue.

"THE BERT MEDIUM.—There is no advertising medium equal to *FOREST AND STREAM* for bringing to public notice yachts for sale or wanted to purchase. Its circulation among the yachting public is larger than that of any journal, whether daily, weekly or monthly. It covers the whole country. Not long ago a schooner advertised a single time in these columns brought a purchaser inside of a week, and a recent card of the same nature has resulted in numerous answers to its first insertion. Parties intending to offer yacht property cannot do better than avail themselves of our circulation.

"WHAT THE PUBLIC THINKS.—A letter from the East says:—"We heartily endorse your views as expressed in your Journal, which the yachtsmen of our club here thoroughly appreciate."

"YACHT FOR SALE.—A fine little 5-ton cruiser, ready to go into commission, is offered at a bargain. See our "for sale" columns.

EXPERIENCE WILL TELL.

MUSKOGEE, Mich., Feb. 21st.

Editor Forest and Stream:—

The statement made by Mr. Thomas Clapham in your issue of the 19th inst., that it would require "from four to six men to handle a forty-foot cutter, if any speed was expected from her," is so much at variance with my own experience that I cannot let it pass unchallenged. Either his cutter is not rigged like mine or his men must be very slow. I have a cutter-rigged yacht 26x35-12x25 feet, and with the assistance of one roadman I can handle her in ordinary weather, and with two men besides myself can handle her in any weather, where it is possible for a boat of her size to live. I have seen the cutter-rigged yacht *Indie*, while sailing in company with mine, and carrying whole mainsail, staysail, jib and topsail shotened down to single reefed mainsail and staysail—her skipper expecting a severe squall, which, however, passed ahead of the yacht—reefs shaken out, and all the first-momented cloth spread, while the yacht continued on her course, and the entire time occupied for both operations was not quite ten minutes, and the work was done by two boys, both under eighteen years of age. These same boys with two others went on four weeks' cruise last season, visiting Mackinac and the various islands at the foot of Lake Michigan, crossed to Green Bay, thence up the shore to Kenosha, and from there home. Part of the time they were in company with a creek slop from the West shore, and had plenty of opportunities of comparing the

workings of the two rigs in all kinds of weather. It is needless to add that they are decidedly in favor of the cutter.

I have during the past six years owned cats, sloops and one cutter, and my experience is that a cutter can be handled safer, easier and drier in heavy weather than can any other small yacht.

L. W. WARREN.

"CORINTHIAN" AND HIS CRITICS.

Editor Forest and Stream:—

It seems that my last communication, instead of being simply, as intended, an answer to the criticisms of your correspondents "Rouge Croix" and "Martin Gale," in reference to practical experience in yacht or naval design, and correcting some mistakes made by them in their communications, especially regarding the ownership of the former, remarks unfortunately were omitted by you from my communication, has raised a hornet's nest about my ears, or rather is deemed worthy of an editorial and a formal answer from the devoted (but not devoted) yachtsman, Mr. Robert Center, who, in doing so, seeks "to kill two birds with one stone." While acknowledging myself a Corinthian, who, perhaps, is more ready with the pen than with the tiller, I have still some smattering of the subject treated of, principally obtained from a study of well-known authors, and observation of the performance of our own yachts for a series of years. I am, therefore, the instant the well-known *America*, designed by Mr. Steers, and speaks of the compliment paid her designer by Marrett in his book. He truly says, "that her centers were adjusted with considerable skill and judgment." This simple acknowledgment to a practical man was not only forced from Marrett, but from all England by her performances; and they further paid him a greater compliment, by immediately lengthening forward all the yachts in England.

Regarding his challenge to sail *Volante* against Mr. Clapham's slop, my mention of it at all was done to correct a mistake in reference to said challenge by your correspondent, "Rouge Croix." It takes Mr. Clapham's acceptance in good faith; and no doubt Mr. Center could be accommodated and fairly met, even if he objects to going single-handed around Long Island in the *Volante*. As to injury to the business of Mr. Clapham by the said race, I have no doubt that it would greatly benefit it.

I am pleased that Mr. Center gives "Bob" Fish credit for good things. I remain with the impression that he did produce two nits, the *Widow* and the *Yindez*, which were not lost to the *Widow* or the *Yindez*. Regarding the *Lois*, does he remember the club race, when the *Yindez*, that famed heavy weather yacht, was in distress, even in the Narrows, water knee-deep on deck, masthead and topmast gone, while every other vessel in the fleet was carrying topsails?

As to vitiating the speed of *Yindez*, in comparison with Kirby's *Arrivo*, I ask him to read the record of *Yindez*; it will do him good. He instances the *Yindez* winning two races; also the *Widow* "hands down." Now, I must confess, I do not understand the term "hands down" as applied to yachting; and while acknowledging my ignorance in that particular, can only imagine it applies to some Corinthian Regatta, or in a crowd of would-be experts who are being initiated into the mysteries of yachting, or to regattas without an antagonist worthy of the name, somewhat after *Mischief's* late victory.

As to your editorial comments, friend Editor, upon the value of naval design, you seem to intimate that I hold science in disdain, whereas I have the profoundest respect for science. Science utilizes electricity, but all the time to electricity are but assumed; and so I need I may regard somewhat in the same manner naval design, its theories, especially regarding speed, being assumed.

As to such triumphs of science, you instance a *Pompana* or a *Devastation* monitor. Without entering the profound mysteries, let us take some English authority on the subject, since they appear fashionable among Corinthians. I instance the capsizing of the iron-clad frigate *Captain*, and later the frigate *Euryedon*, by cascading seas. The *America*, which followed the first disaster, the verdict was that scientific principles were strictly followed in her construction, and all proper and necessary precautions were observed, and that the disaster was simply a visitation of Providence, or rather an "unaccountable." So, perhaps, with the unfortunate *Albatross*, so often quoted by you. Her Captain, perhaps, was a Corinthian in matters which required experience and judgment.

Now, as to the quotation from the great masters, in whom unbroken genius of the sciences whose science and education fail. Have you ever observed one of our vessels-of-war? Do not look at them casually as they lie in the Navy Yard, but ask from the officers and tars who man them of their performance at sea. They will tell you that they often roll their yard-arms in solid, so that the sea can be seen from the lower hold through the main-hatch. These, however, are triumphs of skill, upon whose design untold wealth of science (principally German) has been exhausted. In opposition to this look at the frigate *Nagato*, designed by a practical man of genius, Steers. Built under the greatest opposition of would-be-scientists, and although acknowledged by the English to be the finest and speediest vessel-of-war ever constructed, finally tinkered and destroyed by those who in doing so acknowledged their incompetence.

And now as to our own vaunted scientific yachts. I will not give you the vain task of pointing to one instance, where a so-called scientific vessel has been produced and developed speed without some or other modification of rig or otherwise. In a contemporary I was amused in reading the record of one of our scientific yachts. After specifying her alterations, such as in one instance of cutting a few feet from her bowsprit; in another, adding nine inches of skag aft, then removing it on another occasion; he continues and informs the reader that, her speed being remarkably free, she needs but a few additional cloths to her mainsail to be one of the fastest vessels to windward—she being at present, as is well-known, notably deficient in that respect.

In retarding the article upon yacht measurement by Mr. A. Cary I would respectfully beg leave to call his attention to some things which have probably escaped his notice, as seen through other glasses. In his objection to length as a measurement he seizes upon the old cry of our English friends, "Seaworthiness," and its tendency to produce wide, heavily-spurred vessels, and gives us a fearful picture of the behavior of over-spurred vessels; for the gentleman who sparrs *Vidua*, *Madcap*, *Indie*, *Tidal Wave* and the new *Mischief*, remarkably cool, to say the least.

Is length not the principal element of speed? In comparing *Indie* with *Tidal Wave*. Would it not be better and fairer to compare *Indie* with *Hambler*, one of her class? He certainly cannot object to *Rambler* for want of freeboard or depth or speed either, in the comparison.

As to his objection to freeboard being taxed, witness the performances of *Palmer*, the bulkiest as well as the fastest of our

large center-board schooners. The records prove that a fast vessel cannot be handicapped under this measurement by a slow one.

In continuation, he instances the *Regina* and *Viren*, and intimates that *Regina* would, with more freeboard, have better "all round qualities." Alas! the present *Viren* has "all round qualities" for myself I will none of them.

The next system of measurement considers as our measurement of Corinthians, the Scandinavian, and probably the coming measurement of the New York Club. To exemplify the working of this measurement be instances a race of *Schener* and *Volante*, in which *Schener* defeated the *Volante*. In other words the little *Schener*, carrying four tons of ballast, defeated a powerful vessel carrying ten tons of lead, after being heavily handicapped by time in her own water.

It simply proves that the *Volante* must be remarkably slow, and that it is difficult even for "Corinthians" to handicap a speedy vessel, even when particularly interested in so doing.

Regarding *Viren* and *Coming*, he proves that the well-known speedy *Coming* can be defeated by a handicap of time to a slow one by this proposed measurement. In fact, to myself, not particularly interested in measurement, his laborious argument simply results in attempting to reduce by time speedy vessels to a level with slow ones, the same problem which our English friends have been at for many years, upon whose measurement a vessel can be measured which has but one measurement, consequently would be allowed so much time in a race that there could be but one result.

Perhaps, finally, it may be an advantage, since having tried the known, and failed to produce other than "all round qualities," in the unknown future, we may be more successful in producing something which may challenge the admiration of the yachting world by defeating our now speedy vessels by handicap of measurement.

As to the cutter, the *Volante* I understand to be one of the fastest of the Scandinavian Yacht Club. If the Commodore intends to command during the cruise of that squadron, I advise him always to start the day before. Upon this subject I will only mention a remark by a celebrated English yacht designer upon viewing one of our cutters. His advice was to "lock the designer up; perhaps he may design another." CORINTHIAN.

Feb. 12th.

Woman's Column.

THE PENNSYLVANIA PLAN.

PENNSYLVANIA, February, 1880.

Editor Forest and Stream:—

I peruse the *FOREST AND STREAM* each week with interest, and think the editor deserves all the praise we can give him, in publishing a man's paper of so much interest to women and children. Our boys love the bear and fish stories very much; and of course they are going to take *FOREST AND STREAM* when they get to be men.

My experience as a sportsman's wife would be very pleasant if it were not for the dogs, but alas! those beautiful pointers and setters have no charms for me. If the setters would only set still and the pointers keep their heads pointed toward the barn, instead of pointing it in the back door whenever it is left open, I could endure it; in fact I have to say, nay, in the fall our very busy day I was helping prepare dinner, and as it was baking day there happened to be only one loaf of bread—"the last loaf." I laid it out on the shelf, when the next thing that attracted my attention was our "Flora." She had pointed the loaf and was retrieving with it as fast as possible, and only half an hour to dinner. Imagine, if you can, how shilling I must have looked, and with what good grace I prepared more; and as I told my husband of my grievance he only stroked the head of the beautiful animal and said: "Missus ought to have been more careful and not to have left the door open, hadn't she?"

Unlike the most of you girls, I am gun-shy, though I rode several miles the other day with the gun in our cutter. I really hope to be brave enough to try my hand at shooting some day, but should prefer glass balls to birds. I really enjoy seeing my husband shoot, and I think he is a capital shot, and have often tried to get him to challenge Bogardus, which I presume he would do some day. I have never accompanied my husband on his hunting trips, but expect to do so next fall if nothing happens. My husband is a physician.

I ride with him a great deal and enjoy the wild and picturesque scenery of old Pennsylvania very much; in fact, our lives are gliding on very pleasantly, and if wifely good luck happens they will find it, if their husbands are sportsmen; and I try to put up with all their eccentricities; but deliver me from such a trial as Zeala had, keeping a dog under the bed nights. PAULINA.

SOUND ON THE DUCK QUESTION.—The *Northeast* (Md.) *Record* complains, in a recent issue, that Maryland duck shooting is being ruined by the incursion of "an army of sports from all the ends of the earth, who come down here and bang away like mad, spoiling the sport as well as the profit that rightly belongs to the citizens of the State," and the writer calls for a law which shall limit ducking licenses to citizens of the State. It is idle to assume that this is not a question of Maryland sportsmen and professional duck hunters themselves, for no one knows better than they do that the greatest income from the ducking grounds is derived from these so-called "sports" from all the ends of the earth, for, as the *Haute Republican* pertinently observes, the sportsman from abroad cannot go down there "and bang away like mad," unless they charter one of the regularly licensed craft of those waters, or own their own craft, which are governed by the same laws that regulate those of citizens. This editor adds: "Mr. Jos. Bailey (of the well-known firm of jewelers, Phila.), whom we mention by way of illustration, asserts that every pair of ducks he kills on our flats costs him at least \$10, and if he thought that he was doing the slightest possible injury to a single person in *Haute de Grace* he would never shoot another duck in our waters. This, we believe, is the sentiment of the sportsmen who have taken the purpose of shooting ducks, occasionally. In our judgment the gunners of *Haute de Grace* should be united in some course of action. We have laws and legislation enough on the subject—in fact, have too much. The laws as now on the statute books were passed in precisely the shape our gunners desired them, and if its provisions were faithfully carried out there would, no doubt, be more ducks killed and less grumbling."

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below :

Collect Subscription price, 3 months,	\$1.00	6 months,	\$2.00	1 year,	\$4.00	2 years,	\$7.00	3 years,	\$10.00
Commission to be retained, 3 "	.25	"	.50	"	1.00	"	1.50	"	2.00
Amount to remit us, 3 "	.75	6 "	\$1.50	1 "	\$3.00	2 "	\$5.50	3 "	\$8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00

Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles :

Jordan's Manual of Vertebrates. A copy of FOREST AND STREAM for one year. A three-piece double-ferule, lancewood tip, full mounted, polished brass, Trout or Bass Rod.	Coues' Field Ornithology. One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks. One Russia-Leather Fly-book, and one dozen assorted Flies.	One five-foot lancewood Bow, Horn Tips, and one dozen 25-inch Arrows. One pair Club Skates.
--	---	--

To any Person sending us, before July, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:

Two copies of Forest and Stream for one Year. A four-piece, double ferule, guides and reel-band, hollow, butt, extra tip, full mounted, Bait or Brass Rod. One 3-piece do Fly Rod.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Coues' Key to North American Birds.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickel-plated Club Skates. One Parlor Air-Gun.
--	--	---

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

FIELD TRIAL DERBY OF 1880

THE first American Field Trial Derby will be run under the National American Kennel Club Rules, about the third week in November, 1880, time and place to be hereafter announced, for setter and pointer puppies whelped on or after APRIL 1st, 1879.

First Prize, \$150; Second, \$100; Third, \$50. Entries, Five Dollars each, to be paid at time of entry; Ten Dollars additional each for starters, to be paid before starting.

Entries, giving full particulars as to color, marking, sex, pedigree and name, must be made on or before APRIL 1st, 1880, to the Secretary of the National American Kennel Club.

Any number of dogs, the property of one owner, can run for this stake. The names and pedigree of all the puppies entered will be sent to all the sportsmen's papers for publication. The forfeit money to be added to the stake and divided between the winning dogs in the same ratio or proportion as the stake is divided.

ENTRIES CLOSE APRIL 1st, 1880.

For blank forms of entry apply to

CHARLES DE RONGE,

Secretary N. A. K. C.,

(P. O. Box 964.) No. 51 Broad St., N. Y. City.
Feb. 19, 80.

MANGE.

MANGE. MANGE.

CLOVER'S IMPERIAL MANGE CURE is warranted to cure all kinds and conditions of mange for skin diseases of any nature on dogs or cattle without injury to the animal. One application is usually all that is necessary. H. CLOVER, Sole prop'r Imperial Kennel, Tom's River, N. J. Agents: Conroy, Bisset & Malleson, 65 Fulton st., N. Y.; J. P. Lovell & Sons, Book Square, Boston; Jos. C. Grubb & Co., 712 Market st., Phila.; P. P. Taylor, 72 East Madison st., Chicago; Crookes, Hilder & Co., 604 North Fourth st., St. Louis. Price, 50 cents.

NOTICE.—A DOG TRAINER.—The undersigned, now prepared to take a limited number of dogs for thorough handling and breaking, respectfully offers the following well-known gentlemen as references: Mr. F. Schenck, 88 William st., N. Y.; Mr. H. Dennis, Newark, N. J.; Dr. W. S. Webb, 43 Wall st., N. Y.; Mr. Chas. Heath, Newark, N. J., and Mr. Edward Levorich, 111 Bowle st., N. Y. For particulars and prices, apply to T. E. SMITH, Stockholm, N. J. Feb. 19, 80.

A RARE CHANCE.—To reduce my kennel, I offer for sale my handsome red Irish setter bitch Kate, 18 months old, staunch as a rock, with capital nose, and a good retriever; humped hind feet. Price \$25. Also two magnificent red Irish bitch pups, two months old; these pups combine the blood of two great champions, Plunkett and York. Price \$10 each. Pedigree furnished. Address CHAS. E. KEAY, Birmingham, N. Y. Feb. 20, 80.

WANTED—I want to have two or three valuable setter and pointer puppies thoroughly broken and trained in quail, woodcock and snipe by an experienced man who lives where this kind of game is plenty. Virginia, Maryland, Delaware or Southern New Jersey preferred. Address with full particulars, including price, references, &c., Mr. H. C., Forest and Stream office, March 4.

FOR SALE.—A beautiful cocker spaniel bitch, in color, liver and white; three months old; imported stock. Price, \$10. CHAS. DENISON, Hartford, Conn. March.

FOR SALE.—A very beautiful two-year-old, thoroughbred, black and tan, English fox-should bitch. She is an excellent breeder, and is well-bred by competent judges to be the prettiest animal that they ever saw. Desiring to sell out, I also offer, at fair figures, thirteen good fox-hounds, some of which I purchased at a sale. For further particulars address HARRY LOW, Orangeville, Col. Co., Pa. March, 1880.

Extra-fine Trout, reversed wings	- - - - -	\$1 50
" " " " " "	- - - - -	2 00
" Maine " " " "	- - - - -	2 00
" Black Bass, small " " "	- - - - -	2 00
" " " large " " "	- - - - -	3 00
" " " trolling " " "	- - - - -	4 00
" Salmon, according to pattern	- - - - -	3 00 to 6 00

We have over three hundred patterns in stock, and can tie any pattern to order. Prices are given per dozen; we do not sell less than one dozen, but will give any assortment in the dozen. All our flies are tied on our celebrated Spring Steel Spout Hooks.

Flies tied in the ordinary way (without reversing wings) at one-third less than above prices. By turning back the wings the beauty and DURABILITY of the fly is vastly increased.

The following celebrated Dogs are in the stud.

DOGS!

St Bernard dog "Marco", rough coated, two years old; a magnificent animal—Rev. J. Cunningham Macdonald's stock—second prize Hanover Show and Rochester.

Newfoundland dog "Keeper", four years old; first prize Westminster Kennel Show, 1879.

Pointer dog, "Craxton", liver and white; one and a half year old; out of Lord Setton's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show.

Blue Belton setter, "Decimial Dash", eighteen months old; sired by Lowley's celebrated "Dash"—a magnificent stud dog—never exhibited.

Irish setter, "Rover II", pure red; son of Macdonald's champion "Rover". Never exhibited.

English setter, "Ranger II", a pure bred Lakeland, son of Macdonald's celebrated "Ranger". He got won first at Hanover and Paris shows, and second at Puppy Stakes in Eastern Field Trials.

Stud fee, \$25.00.

For Sale.

The get of the following thoroughbred Bitches.

St. Bernard "Braunfels", rough coated, out of Prince Solna's celebrated stock; a magnificent bitch, in whelp to "Croxteth" lat prizes in Hanover and Rochester show.

Pointer "Queen", liver and white, lat Westminster pedigree show.

Gordon setter "Beauty", lat Boston Show 1878.

English setter "Moya", liver and white, out of "Queen" and "Sancho".

Blue Belton setter "Sik".

Irish setter "Moya", out of Col. Hilliard's "Palmerston", in whelp to "Rover II".

English setter "Donna", white and lemon.

These can be secured by an early application. Besides lot for sale pointers and setters of minor quality, but of good thoroughbred stock. Also several puppies of "Queen" and "Sancho".

Having engaged the services of Macdonald's stock, we can guarantee the purity of the blood, and for thoroughly broken dogs, deliverable, autumn, 1880. Particulars will be furnished on application to

The "STANDARD TARGET."—For Rifle Practice.
Size 6 inches. Bulls-eye 14 inches.
feet, off-hand. The zones rise by area instead
of diameter.

Marksmen will appreciate the new departure
which this target has inaugurated. The accurate
rifleman now gets the true value of his shots,
while on old-style targets the record was so tainted
by the element of chance as to give but a
vague idea of the shooter's skill. For instance,
on a 200 yard Crossmoor "aceer," scoring 4
hastier fires the area of a "bull," scoring 5. Every
rifleman knows that no degree of skill or care will
give immunity from occasional misses, and un-
der the old system it was almost the rule for good
marksmen to be beaten by bad ones. One man
would pile up eight snug bulls out of ten, but
lose the other two, while his competitor, "shoot-
ing for fours," would scatter his strays all over
the board center, blunder one shot into the edge
of the bull, and win! Now in deer stalking and
shooting at 80 yards, the winner would have
wounded and lost one deer, while the loser would
have struck down eight, all shot through the
heart. Of course there are people who still con-
tend that under the old method "all had an equal
chance," which is very true. But it is also true
that their equality of chance would have been
in no wise impaired if they should have sat
down and thrown dice to determine who was the
better shot. In contests of skill every element
of chance should be eliminated.

Arrangements have been made for supplying
these targets at a merely nominal price, and it is
now an easy matter to gauge relative skill by
uniform practice, and to communicate definite
results without obscuring them by explanatory
details. The targets are mailed, post-paid to any
address in the United States at fifty cents per
hundred, and quite a liberal discount is made to
clubs and dealers. Send orders to CUSSEANS,
MAY & SERRAVALLO, Glen Allen, Virginia.

Unfrequented Regions of the Adirondacks.

I WILL endeavor to describe a few localities in the northern portion of the Adirondacks, most of which have been comparatively little frequented by sportsmen from abroad. There are but two roads in the country, running north and south, reaching up into the heart of the Adirondack region. One is from Malone, running directly south to Paul Smith's on St. Regis Lake, and past Meacham Lake; the other from Moira and Brushport, fourteen miles west, running directly south and parallel to the other to Blue Mountain. After going ten miles south there is no road crossing from one to the other, and all the country between the two is an unbroken wilderness. All the parties going in at the northern end of the Adirondacks, or nearly all, have gone in by the Malone road, and of course that portion in the western part of the county has not been nearly as much hunted as the eastern, except in the extreme south end, which has been hunted and fished over by parties fitted out from St. Regis and Saranac Lakes, and by parties coming in by Tupper's Lake. The road that runs south from Moira ends at Blue Mountain, twenty-four miles south of here. It is nearly opposite Meacham Lake on the Malone Road, about fifteen miles west of there and about twenty-five miles northwest from St. Regis Lake, or Paul Smith's house. There is a house there kept by Henry Phelps, with all kinds of accommodation for sportsmen, and charges reasonable—\$1 per day for board, and \$1.50 for guides. He will rig out parties with camping rigs, boats, etc., who wish to go to some of the streams and ponds in the vicinity. The house is large and commodious; he sets a good table, has good beds, and is much better liked than the former proprietor, Merrill, who died a year or so ago. The foot of the Sixteen-mile Level of the St. Regis River is near the house. Boats can run up sixteen miles on this, and it is a splendid place for deer and trout, with a bear occasionally. The localities, which are mostly new, and have been but very little visited, will all have to be reached by way of the Blue Mountain route. Wolf Pond, eight miles southwest from Blue Mountain House, is but very little visited. The upper branches of the Parishville River run close to it and abound in trout, some of a large size, and in any de-

kind of a day one can catch all the trout he can carry. Deer, bears and panthers are to be found there. I was there in June last, and at night the deer would come around the shanty and whistle at all hours; and we frequently heard a catamount scream, and one of the party saw two on the banks of the pond. There is no road in there, only a blazed trail. When I and my party went in, we had Mr. Phelps take our boat and baggage on a jumper—a sort of sled—and part went ahead and cleared the road; the rest stayed by the sled and helped it over logs, and in that way we got along very well. The river there is fifteen to twenty-five yards wide, and there are levels of still water and rapids. The levels have to be fished from a boat.

There is another branch a short distance below, which is smaller, but it is full of trout, and has never been fished by a dozen different persons. I did not go to it, for we got more trout than we wanted where we were close to our camp. There is a very good shanty at the pond, made of logs, with a back roof, with a door and small glass window, belonging to a trapper who traps here in the late fall. All the country west of Blue Mountain is an unbroken wilderness for miles, until you come to the back settlements in St. Lawrence County, and there are several ponds and streams which have no name and are only frequented by trappers and a few still-hunters. Cavanaugh Pond is only three miles from Blue Mountain House and is a great resort for deer and other animals, but it is not much of a place for trout. Many deer were killed there last season by only a few persons hunting. Mr. Phelps keeps a boat there, and has a rough shanty built on its shore. All this country west of the road for eight or ten miles north of Blue Mountain House has never been visited but by very few, if any, sportsmen. It is out of the way of parties coming from the large sporting houses in the eastern section of the Adirondacks, and the only way they can reach it is to come down the St. Regis River, through Sixteen-mile Level, and this would be a trip no guides would like to undertake.

Three miles up the Sixteen-mile Level on the St. Regis River, Quebec Brook empties, and about five miles up the brook is Muddywaska Pond. It is a rough road into it from the river, and a boat has to be carried more than half the way. It is a good long day's tramp to go there from the Blue Mountain House. The pond itself is not much, but there is a level above and below it of about four miles in length each, with deep water and many trout of large size. It is a famous place for deer and other animals. It has been visited by some few from abroad, who went in with guides from McCollom's on the Meacham Road, but few have been in, on account of the distance from any road. I have been there several times and always had good success. At the foot of the lower level there are a few beavers yet, and one is occasionally seen. I have seen birch trees four inches in diameter freshly cut by them; and they were there last season, for a friend of mine saw one while he was fishing at the falls. One was killed two years ago. I have caught many big trout in both the levels, and have heard some that took hook and line from New York City, with them several times. The stream can be fished nicely with a fly from a boat. Parties going in must take a boat in with them, as none are kept there, except by some hunter who hides his boat. I and two others expect to have one there of our own next season. We have one now at Wolf Pond if no one has found it and made away with it.

Four miles below the Blue Mountain House, on the river, is Spring Cove House, at the head of another level; it is owned by Den Smith. He keeps sportsmen and acts as guide himself, and is a good one. He will furnish boats and provisions and everything for camping out, and will go anywhere with parties at a reasonable price. He was up on the Sixteen-mile Level four weeks last season, with two young gentlemen from New York City. He is a good cook and understands all about hunting and fishing. His address is the same as that of Mr. Phelps, St. Regis Falls Post Office, Franklin County, N. Y. Parties going to either had better write a week or so in advance, and if to Mr. Smith he will meet them at St. Regis Falls. His place is some distance off the main road.

About five miles lower down the river is the Humphrey Level, eight to ten miles in length. Several families live there and will take a limited number of boarders. Three or four families live in that vicinity, among whom is old Bill Edwards, who has killed more large game than any one man in the northern part of the Adirondacks. He has killed seven catamounts or panthers, and bears and wolves by dozens. He acts as guide and will go with parties to any locality, but cannot furnish anything but food and dogs. Mr. Dimmick, a resident there, will always accommodate a few boarders at seventy-five cents per day and throw in the use of his boat. It would be a good place for two or three to spend a week or more, who could handle a boat themselves and fish and enjoy the mountain air at a small expense. It is about fifteen miles from here (Moira), and if they wished to go off to any other place they could get Edwards for guide, or some of the others there. There are

several small ponds near there in which trout are quite numerous; besides, good trout-fishing can be had in the river. The East Branch of the St. Regis empties into the Middle Branch near the foot of this level, and along both streams here is a great place for deer. It was on the East Branch, near here, that a party of three killed fourteen deer and a bear in one week November last. Up the East Branch, through its whole length to where it rises in Meacham Lake, is an unbroken wilderness, except one or two small clearings of an acre or two; one at the only place where it runs near a traveled road. That is at the old Sanford & Skinner Saw Mill, at the foot of a level of eight or ten miles. A Mr. Sampson keeps a house here and boats, and has several grown up boys who act as guides; it is a good locality for deer-hunting and trout-fishing also, and is the greatest place for ruffed grouse I know of; in fact they are plenty all over the North Woods clear down to this village.

I have given you a sketch of some of the localities that I know of, where good sport at either hunting or fishing can be had, places I have visited myself. But there is a large portion of the country between the two main roads, which I never visited, and I know of no one who ever did.

The Blue Mountain House is situated in a fine locality, and the view from it is the best of any sporting establishment I ever visited in the mountains. One can look from its door over a tract of country sixty miles in extent. White Face Mountain, in Essex County, is in plain sight, also Deber Mountain beyond Meacham, and the whole chain of mountains in the northeast and St. Regis in the southeast. It is the best place I know of for the sportsman to go to that is easy of access, and to fit out from to go to other localities not much frequented, to camp out, and the cost will not be one half what it would be at St. Regis Lake and other places east and southeast. Of course they have not all the extras to be found at Paul Smith's and other older establishments, but plenty of good food and good beds, with board by the week for \$4.

I go independent of all. I have a tent, boat, sheet-iron stove, etc. I camped seven weeks on the Sixteen-mile Level all alone in August and September last. Took along a sack of flour and all other things and did my own cooking and baking. The whole trip did not cost me over \$15 from home. I killed a great many spruce partridges in September. They are living on berries then and have no bad taste. I caught a great many trout in August with a fly in the many deep spring holes along the level, and gave a great many away to blue berry parties who come in there in August to gather the berries. The first week I was there I heard a catamount scream regularly every morning about 9 o'clock from Rock Mountain, opposite my camp, and shortly after an old hunter gathering spruce gum over there saw him or his mate.

There are one or two places on the Malone Road to St. Regis Lake, where much better hunting and fishing can be had than in the vicinity of the sporting establishments or hotels. McCollom's, about half way between Meacham and St. Regis Lake, is yet a grand good place to go for deer or trout. I was there over a year ago for eight or nine years previous to the last two. Osgood River and Hay's Brook, close by, are good trout streams, and I have caught a trout in each that weighed three pounds, one three pounds two ounces by McCollom's steelyards, and the other measured twenty inches in length. I never fished in Hay's Brook but what I got my basket full of trout. It is the best stream for trout in the hot days in July and August. I know of, as the water is cold on account of the many springs along its banks, and trout run up it from Osgood River and Meacham Lake. (The Osgood River enters into Meacham Lake). There are some large trout in it, but the average run from eight inches to twelve inches in length, with some up to eighteen inches and twenty inches. Muddywaska Pond lies west of McCollom's some eight miles, and a few parties go in this way. Spring Pond, Chain Ponds, Baker Pond and Rice Pond are all within two miles of the house. Mr. McCollom will accommodate a few boarders at from \$1 to \$1.25. He has a large farm, keeps forty or fifty head of cattle, has a large ice house and is a good hunter. Quebec Pond and Folsbury Jr., are six and seven miles southwest of there. They are frequented considerably by parties from St. Regis Lake. On the whole, I consider McCollom's the best place for hunting or fishing on that road. The head of Meacham Lake is only four miles north, and parties wishing to go there will take his boat down, and they can fish and hunt there if they like, as he often does. Meacham Lake affords better sport in my opinion than any of the old sporting establishments, or rather localities, which have had hotels near them for any length of time to accommodate sportsmen. Mr. Fuller has taken considerable pains to keep the lake stocked with young trout, and has a regular hatching establishment of his own. Salmon trout are caught there weighing from twenty-five to thirty pounds in May quite frequently by trolling. Mr. McCollom's address is A. C. McCollom, Duane P. O., Franklin Co., N. Y. Mr. Fuller's is A. R. Fuller, same post office, Ragged Lake, the State Dam on Salmon River; and the Bend on same river above

Titusville, are all good places for game and trout, but being near Malone they are overrun and fished and hunted to death soon after the seasons open, the same as it is in vicinity of St. Regis and other lakes and ponds in that neighborhood. . . . The old Northwest Bay Road, running across the Lower St. Regis district from east to west, or northwest and southeast, is not now in use, only as a foot-path, except at the western end. It was built by the army of the war of 1812, when they went from Crown Point to Lake Ontario, and has grown up with bushes and filled in with fallen trees so as not to be passable with a wagon.

ALBERT CORNISH.

DULLING FOR TROUT.

DURING the summer of 1857 the Rockbridge Alum Springs, in Virginia, were crowded with distinguished visitors from all parts of the South, who came there principally to drink of the health-giving waters. The town of Lexington, seventeen miles distant, always sent its quota on special occasions, such as ball nights, concerts and parties, to the Jordan Springs, ten miles south. Among the many who represented the college town at the springs, and who were sure to be there the latter part of every week, was John Letcher, a member of Congress at that time, and T. J. Jackson, a professor in the Virginia Military Institute. These two gentlemen were constant and steadfast friends then and in the squally days that came after, and their chief amusement while at the "Rock Alum" was derived from the pleasure of jolting ten-pins—a game both gentlemen were very fond of. The alleys were situated on the edge of a creek bearing the name of the springs, and at the bottom of the towering Mill Mountain; and herein honest John Letcher and the modest Professor enjoyed themselves in an innocent way.

The principal hotel in Lexington was kept by a wag named Mann, a jolly good fellow, a prime favorite with the students and most of the townspeople, and always ready to bet on any point there was the slightest dispute about. This latter talent of his was the magnet that drew the young students to Mann's Hotel; and one evening, while a party was sitting in the capacious office, the subject of trout fishing was broached, and as it was well known that Rockbridge Alum Creek, two or three miles above the springs, was alive with those delicate fish, the conversation naturally drifted to that spot, and the men began to tell the stories told in regard to it. Among the many exaggerations, Bill Mann said that he had caught eighty trout in one hour in said creek, and could perform the same feat over again. This was pool-poohed, of course, and resulted in a student offering to bet a dinner for ten that such a fishing feat was impossible, stating that he was willing to lose the wager if Mann would bring back eighty trout, and give him his word and honor that said fish were taken out of the water in the space of an hour. Now, the fact is that Bill Mann never performed what he said he had, but spilling for a bet of some kind, he threw out this proposition as a bait, and getting a bite, was bound in self-defense to try and win.

The following day Bill Mann hitched up his team of trotters, and after a ride of a few hours' duration arrived at the Rock Alum Springs, and after registering, as was his custom, he made a call on Charles Hunt, to whom he revealed the secret of his sudden visit. Hunt vowed that he could not assist him, but advised him to make a call on John Letcher, who was then in the ten-pin alley. Hither Mann repaired, and was greeted on his entrance with a Virginia welcome, and invited to take a part in the game then going on, which he accepted, and during one of the breathing spells between "strikes" and "spaces" Mann told the Congressman of his mission, and asked his assistance and advice in the matter; but John Letcher referred him to T. J. Jackson, saying: "Professor, Bill Mann has come over from Lexington for the purpose of winning a wager by catching eighty trout in one hour, and as you are a devoted follower of Walton, perhaps you may be able to tell him in what part of the creek trout are so plenty that they will nibble at a hook at the rate of eight to the hour."

The modest Professor was very seldom known to laugh; but this speech, coming from his intimate friend Letcher, made him smile, as he never was known to fish, and knew no more about Rock Alum Creek—except that part near the springs, where trout would only live long enough to run the blockade on their way to the James—than a man in New York, for fishing was not his forte; and believing that honest John would not take a job at his expense, he said: "Mr. Mann, as far as my being a disciple of Walton, I give you my word, sir, that I never read his book in my life; but I have stood on the bridge and gazed on the water for many moments, expecting to see one of those silvery trout I have heard so much about in conversation at these springs, and I declare that I've never yet seen one. The nearest approach to a fish that my eyes behold was what I would call a water snake, and if those are the kind of trout you are after I have no doubt but what you will be able to find many, sir."

This was said by Jackson in such a sober way that there was no doubt but what he was in dead earnest, and more especially so as he was not given to joking; but the afterward renowned General was not posted in regard to trout, as the sequel will show.

Sitting in the alley, a quiet inspector of the interesting game, was Mark Lewis, who was thoroughly informed on trout fishing in the creek and the different methods of catching them. Overhearing the conversation, and seeing that the gentleman after trout did not find much consolation or knowledge in that quarter, Mark stepped up, saying: "I beg your pardon, gentlemen, and, turning to Bill Mann, continued, 'if you are anxious to get eighty trout in one hour's fishing you can do so, sir; but I request that you continue your game, and this evening, in Charles Hunt's office, you shall know all about the fishing.'"

This voluntary advice from a stranger seemed to be satisfactory to Mr. Mann, and the game of ten-pins went on until nearly dark, when the party went to their respective rooms preparatory to supper.

There was at this time a professional hunter named Hostetter at the springs in a twofold capacity—as a slayer of trained snakes in day time, and as a hunter of bears by night. He was an odd character, who looked upon everything in the light of business; sporting as a pastime was secondary with him, but he knew the favorite haunts of the deer, bears and the trout better than any person in that locality. To him Mark Lewis spoke of the conver-

sation in the alley, and got his promise not to mention his mode of catching trout even if he was engaged by Mr. Mann. While Hostetter and Mark Lewis were biting the end of the last strawberry in their julep, Bill Mann entered, and after an introduction and a few words of explanation in regard to the locality where trout were abundant, an agreement was entered into whereby Bill Mann was to give Hostetter \$10 if eighty trout were caught in one hour. Ten dollars to the hunter was a mountain of wealth, and the next morning he was on hand bright and early. Bill Mann showed himself with a fancy rod, silver reel and a box containing any number of different colored flies in his hands; and at this novel appearance Mark and the hunter naturally smiled; but the secret of their smile they kept to themselves, and as they jogged along up the banks of the creek the witty hunter kept the other two in a state of excitement by his wonderful yarns about trout fishing and hunting the "varmints" that the mountains above were full of. After a walk of two miles they came to a spot where the creek widened into a large pond, or small lake, the water of which was as clear as crystal, and the nimble fish were sporting about as thick as locusts, hiding themselves under the rocks at the near approach of the human step. All around was solitude, the very sky being shut out from view by the thickness of the foliage.

"Here we are, gentlemen," said Hostetter, and innately thereon Mr. Mann commenced to rig the end of his line with a purple fly; but Hostetter ended that amusement by saying: "Put that foolish now-fangled notion away. You came here to get eighty trout in one hour; now I'll save you all that trouble by catching them myself, and to save any dispute, when I enter that water, time me."

Thereupon Mr. Hostetter divested himself of his boots, and, after rolling his pants up as high as possible, took a piece of common twine out of his pocket, and making a running noose on one end entered the silvery pond, saying, "Pull out that watch."

Mark Lewis was not surprised, because he had seen the same operation performed before; but Bill Mann looked on this queer proceeding with eyes and mouth open, wondering what the next act would be. He had not long to wait, for the moment Hostetter entered the water, he ran his left hand in under the rocks, which frightened the fish, making them swim out, and as sure as fate one would get his head in that noose which the hunter held in his right hand, which no sooner done, than "Old Hoss"—as he was affectionately called—would jerk him up and throw him out on the grass, when Mark Lewis attended to the comfort of the victim by placing him in a basket lined with sawdust. This operation was continued with a lightning rapidity, and at last Hostetter, with face covered with perspiration, looked up as if resting himself, and said: "Have you kept tally, Mr. Lewis?"

"I have," answered Mark, "and there are eighty-three in the basket, now." "How is the time?" asked "Hoss," and the answer came back from Bill Mann, "Five seconds to spare."

Getting out of the water Hostetter dried his limbs in the wild grass that was around there in abundance, and, redressing, the party turned their faces toward the hotel. "Old Hoss" carried the basket, and between intervals Bill Mann ventured to ask the term or name of that kind of fishing.

"Dulling, sir; and it is the only safe way of fishing in this creek, for flies they won't touch, and the shade of a rod frightens them."

"Well, I must say," remarked Mr. Mann, "that this style of fishing is expeditious, but a more barbarous proceeding I know not of, for it does not give the trout a fair chance."

"Never mind about that," replied "Hoss," "fishing is no pastime to me; time is, however; and whenever you make another bet of this kind, be sure and go a-dulling."

After a pleasant walk the two miles were covered and the Springs were again reached, where, on the corner, who should be seen standing on the porch of the hotel but Professor Jackson and honest John Letcher. Bill Mann, in his blunt way, sang out: "Come, Professor, and see the snakes."

A second invitation was not necessary, and, when Professor Jackson looked on the innocent darlings in the basket, he exclaimed: "Bless my soul! these are not the kind of fish I saw while standing on the bridge. They are beautiful!"

Bill Mann's wagon was brought before the door, the basket of fish placed under the seat, and, before driving away, he placed the promised note in Hostetter's hand, and the latter in company of Mark Lewis made a call upon the pet snakes in the glass cage, who were found doing so well that another call was made on Charles Hunt, who enjoyed the story how Bill Mann caught the trout.

That night, in Mann's Hotel, Lexington, a party of students sat down to a supper won by Bill, and enjoyed themselves amazingly in listening to his great exploit; but if there are any of said students alive to-day, they know for the first time how those fish were caught.

It is hardly necessary to say that the modest Professor was afterward the celebrated General Jackson's honest John Letcher, who was Governor of Old Virginia; and Bill Mann, Captain of the famous Rockbridge Artillery. Mark Lewis and Hostetter served an apprenticeship, the former as scout and blockade runner, and the latter as sharpshooter under the modest Professor; and as for Charles Hunt, the mixer of delicious jules, he became the mixer of other delicacies while first officer of the Fayette Artillery.

Fishing is as good as ever in Rock Alum Creek, but I hope that the barbarous practice called "dulling" has gone out of fashion.

SPERRY.

Natural History.

BOOKS OF REFERENCE.

A VERY gratifying evidence of the increasing interest in natural history, so-called, in this country, is the frequency with which we receive inquiries from readers for books of reference to aid them in their studies. Some of these questions come to us in very puzzling shape, and indicate clearly enough that their propounders have very crude ideas as to the scope of the term natural history. It is manifestly impossible to name any single work that will enable the reader to gain an adequate conception of the whole scope of biology. The most that we can do is to give a short list of works which they may profitably use in commencing their studies, and, as they advance in them, to recommend the student to specialists in various departments who may be willing to advise them further. It is an unfortunate fact that very many scientific works are so costly as to be beyond the reach of the average reader, but this cannot be said of most works recently published in this country. Most of the works enumerated below can be obtained from any book-seller, or if not known to the ones applied to, they can at all events be obtained by the intending purchaser by writing to the publisher. Government publications can often be obtained through the Congressman of the district in which the person desiring the book resides.

We have divided the list to make it more easy of reference.

MAMMALS.—Prof. S. F. Baird, "Mammals of North America," "Pacific R. R. Explorations and Surveys," Vol. VIII, 1857, Washington, D. C., Government Printing Office.

Dr. Harrison Allen, "Monograph of Bats of North America," 1864, Philadelphia.

Coues and Allen, "North American Rodentia," 1877, Washington, Government Printing Office.

Coues, "Fur-bearing Animals" (N. A. *Mammalia*), 1877, Washington, Government Printing Office.

Caton, "The Deer and Antelope of North America," 1878, Chicago.

There are other works, some of them illustrated, which are rarer and more costly than those mentioned above, but the student, with the information which he can obtain from any of those cited, will be in a position to select for himself what he wishes further. The books to which we have referred contain, moreover, the latest information that we have on the various groups of which they treat. Interesting papers on mammals are to be found scattered through the various Government Reports and supplementary publications that have been issued in such numbers within the past few years, as well as in the various publications of scientific societies. Turning now to the next class of vertebrates, we find among the literature devoted to

BIRDS.—Baird, Brewer and Ridgway, "History of North American Birds" (3 Vols., including only the "Land Birds," so called), Washington, 1874. (A fourth volume devoted to the "Water Birds" was to have completed this work, but the cost-proving greater than was expected, it has never been issued. We have understood that efforts have been made to print the fourth volume by private subscription, and trust they may be successful.)

Coues, "Key to North American Birds," Naturalist's Agency, Salem, Mass., 1872 (Indispensable to the ornithologist or collector).

Coues, "Birds of the Northwest," 1874, Washington, D. C., Government Printing Office.

Coues, "Birds of the Colorado Valley," part I, Washington, 1878, Government Printing Office.

Cooper, "Ornithology of California," edited by S. F. Baird, Vol. I, "Land Birds," University Press, Cambridge, Mass., 1870. (Only one volume issued.)

It is, of course, hopeless to attempt to enumerate any portion of the special ornithological papers and local lists which have been published, nor is it worth while to refer at length to the well known, but costly, illustrated works like the originals of Audubon, Wilson, Bonaparte, Swainson, Richardson and others. Cheaper editions of most of the latter have been published. Any one who desires further information with regard to this subject can easily satisfy himself by referring to the ornithological bibliography which accompanies Dr. Coues' "Birds of the Colorado Valley."

It is scarcely necessary to say that the literature of reptiles is much less extensive than that of the birds. A few works, however, may be quoted.

REPTILES.—Holbrook, "North American Herpetology," 5 Vols., Philadelphia, 1842. (A superbly illustrated work.)

Beld and Girard, "Catalogue of North American Reptiles," Part I, Serpents, 1858.

Agassiz, "Contributions to the Natural History of North America," Part II, North American Testudinata, 1857.

Cope, "Check List of North American Batrachia and Reptilia," Cope, "Partial Catalogue of the Cold-Blooded Vertebrates of Michigan," 1845.

Many minor papers in Government Reports and elsewhere.

NORTH AMERICAN FISHES.—Jordan, "Manual of Vertebrates," Jansen McClurg & Co., Chicago, 1879. (Contains important bibliography.)

GENERAL ZOOLOGY.—Packard's "Manual of Zoology," New York, Henry Holt & Co., 1870 (Other manuals by Tenney, Nicholson and Orton).

GENERAL ANATOMY.—Owen, "Anatomy of Vertebrates," Longmans, Green & Co., London, 1888. Huxley, "Anatomy of Vertebrate Animals," London, 1871. Huxley, "The Anatomy of Invertebrate Animals," London, 1877; J. A. Churchill, New Burlington street.

OSTEOLOGY.—Plover, "Osteology of the Mammalia," Macmillan & Co., London, 1870. (Also Huxley and Owen on vertebrates above cited).

INSECTS.—Packard, "Guide to the Study of Insects," Salem Naturalist's Agency.

NOTES.—In an interesting article published in the *Auburn Daily Advertiser*, Mr. Frank R. Rathbun, well known to our ornithological readers as one of the authors of a most valuable list of the birds of Central New York, makes a very vigorous attack on the English sparrow. The paper alluded to is in two chapters and is entitled "An Exotic Tramp." In his denunciation of the bird the writer makes use of some rather vigorous English, but it cannot be denied that the subject is one which calls for emphatic language. An interesting feature of the paper is the testimony from the various countries of Europe as to the grain-devouring proclivities of *Passer domesticus*, cited by the writer. Speaking of Algeria, he says:—

"The reports from this country are alarming. In 1877, it is stated, that on one estate alone 200 acres of rye were completely devoured by the sparrows before it was ripe, that not a single corn was harvested; and it was calculated that in a neighboring wood, some 150 acres in extent, there were 284,000 nests."

... The *Yonkers Gazette* of February 14th contains a paper on the same subject by E. P. B., whose initials are so well known to our readers that we presume it is not necessary to fill out the name. The article is written in a very temperate and convincing style, and deals principally with the utter failure of the sparrow to accomplish what was claimed for him on his introduction, that is, the reduction of our insect pests, and with its quarrelsome and noisy habits and the attacks which it makes upon our native birds. The writer refers at length to Dr. Coues' admirable paper on the status of *Passer domesticus* in America, and concludes by demanding that the bird be left to shift for himself and no longer be protected by special legislation or fed and petted above our native birds by kind-hearted and well-meaning but injudicious people. ... Of quite another sort is an appeal printed in the *Quebec Morning Chronicle* and appropriately signed "Cock Sparrow." The writer takes occasion to warn the numerous friends of our innocent little fellow citizens, the sparrows, that the dangerous shriek or howl of the "native bird" is already committing havoc in their feathered ranks. This very afternoon the writer and another gentleman, while standing near the City Hall, were eye-witnesses to a butcher-bird carrying off a poor little sparrow in its talons, high over the houses in St. Louis street, having, it is presumed, pounced upon its prey among the trees between the City Hall and No. 1 First Station. Extirpation should be the order of the day as regards the entire race of these feathered marauders. ... Dr. Paul B. Barringer, in a letter to Dr. Coues printed in the *March Naturalist*, and dated Dallas, N. C., announces the advent of *Passer domesticus* in that State. ... In the February number of the *Naturalist* appeared a most valuable article on The Convolution of the Trachea in the sandhill and whooping cranes, from the pen of our valued correspondent, Mr. T. S. Roberts. The writer gives an admirable description of the course of the trachea in *Grus canadensis*, that of *G. americana* having been already described by Dr. Coues in *FOREST AND STREAM* and in "Birds of the Northwest," and gives excellent figures of the sterna of the two species with the slide removed so as to show the course of the trachea in each. Mr. Roberts' descriptions and figures are so exceedingly suggestive that we cannot but hope that further investigation may give him results which will prove most interesting, if not startling.

SIGNS OF SPRING.—Mr. John H. Sage writes us from Portland, Conn., that *Quiscalus purpureus* appeared there Feb. 26th, and that this is the earliest date of which collectors there have any record. ... From Perth Amboy, N. J., J. L. K. writes, under date of Feb. 27th: "Crow-blackbirds made their first appearance here to-day." ... From Baraboo, Wis., comes the following note, dated Feb. 26th: "A few bluebirds have made their appearance, and also a few flocks of mallards have found their way to the Baraboo River, which is now free from ice." ... We take the following extract from the St. John (N. B.) *Daily Telegraph* of Feb. 27th: "An amateur naturalist informs us that a night or two ago he heard the notes of a woodcock in a rural portion of Portland. This bird usually returns to us in the spring, not before, and his presence here now is most remarkable. It is also noteworthy that we have had robins every morning during the present winter, which are also been heard singing. The red-berries, of which they are so fond, have been very plentiful. ... A short walk in the woods on Saturday, Feb. 28th, revealed the fact that the catkins of the alders are about ready to open, and that the skunk cabbage (*Symplocarpus*) is in bloom. The song sparrows, bluebirds and crow-blackbirds are apparently getting ready to go house-keeping; the buds on the elms are swelling and warm wet spots the grass is becoming green. No doubt we shall have some cold and stormy weather yet, but really spring seems very near at hand."

WINTER WEATHER?—*Brooklyn, N. Y., Feb. 23d.*—*Editor Forest and Stream.*—I have recently taken great interest in rifle shooting, and therefore have become a reader of your valuable and interesting paper, feeling I cannot become a skillful rifleman without availing myself of its useful and instructive articles upon all sports in general and guns in particular.

In your last issue I noticed an item relating to the mildness of the winter in Iowa. I think I can tell of something more remarkable. On the 30th of last December I was out shooting crows along the Shrewsbury River, New Jersey, in order to test a new double rifle I had just purchased. On crossing a swampy hollow, through which ran a small brook, I came upon a large garter snake swimming in the water. It remained motionless when it saw me, so I shot and killed it. This is the first instance I have known of a land snake taking to water, and that, too, in the middle of winter. On my return I ran upon a little yellow dandelion, growing fresh and bright as in summer, and also saw several bluebirds, which had evidently been deceived by our mild winter, and imagined spring was at hand.

If you deem this worthy of notice, you may make an item of it.

Our correspondent's observations are well worthy of record, and we are glad to print them. That the snake should have been about at such a date was certainly remarkable. There was nothing very surprising, however, in finding it in the water.

The dandelion was scarcely less out of season. It was the last of its race, no doubt. We plucked one in full bloom Feb. 15th, in a hard snow-storm.

ALBINO IN CALIFORNIA.—Nature seems to have played some strange tricks among the feathered tribes this season. Naturalists and dealers note the arrival of many game birds and other species that have exchanged their original plumage for one of white. At one naturalist's several curious birds may be seen. Perhaps the most uncommon is a little green-winged teal which came in a few days ago among a shipment of other birds from up the Sacramento. It is of an ashy color on the back and has a white breast. The green spot on the wing is changed to a dark color. A female widgeon that came in recently from up the San Joaquin River is of a bright chocolate color on the breast, while the back is of an ashen hue. A mutton shot at Borden Island about two months ago is mottled on the back, having white spots scattered through the usual coat of black. The breast is of a bluish cast, with small white feathers intermixed. The crown and sides of the head are blue and white. A pair of valley quail were recently shot by George Elkenratter, of Seaville, San Mateo County, that were white all over the body, with the exception of the markings on the breast, which retained their wonted color. A brown and white salt marsh rail, killed at Alviso a few months ago by a sportsman of this city, is another freak of nature never before heard of, naturalists say. Another is a robin which came in some time ago. This bird is nearly all white with an occasional black feather.—*San Francisco Chronicle*, Feb. 7th.

RALLUS ELEGANS IN CONNECTICUT.—On Sept. 17th, 1879, I secured a fine female *Rallus elegans*, which was killed here in one of our marshes by a gentleman who was shooting.

As the examples of this bird in New England are not many, we think the above worthy of record.

JNO. H. SAGE.

Portland, Conn., Feb. 28th.

Fish Culture.

ACCLIMATIZATION OF WHITEFISH IN NEW ZEALAND.

U. S. COMMISSION, FISH AND FISHERIES, }
WASHINGTON, D. C., March 4th. }

Editor Forest and Stream.—I send you for publication in *FOREST AND STREAM*, if you think best, the following slip from *The Press*, of Christ Church, New Zealand, of January 10th. This details a very successful experiment in the transmission of white-fish eggs, by Mr. Frank N. Clark, of Northville Mich., and as such should be permanently recorded.

SPENCER F. BAIRD.

The history of the first attempt and failure to introduce American whitefish into New Zealand is well known; but undaunted by the loss of the first consignment, fresh negotiations were entered into by the Government through Mr. R. J. Creighton, of San Francisco, the result being a complete success—that is to say, up to the landing in prime condition of the ova, which arrived by the last California mail. The boxes containing the ova arrived in Auckland by the steamer *Albatross*. They were taken at once transhipped to the *Bimac* by Mr. Firth of that city and arrived in Lyttelton early on Saturday morning. A list of the various places in the colony and the quantity of eggs assigned to each, has already been published, and the box which Mr. S. C. Farr received on behalf of the Canterbury Acclimatization Society, contained approximately 300,000, but the number will be diminished from unavoidable causes in the course of about five per cent. By the kindness of Mr. Conyers, Mr. Farr went down to Lyttelton on Saturday morning by special train, accompanied by the Society's curator and game-keeper, and brought the consignment up to the gardens. No time was then lost in unpacking them. Thanks to the careful manner in which they were packed by Mr. Clark, the ova arrived in splendid condition. They were contained in five smaller boxes and in two larger ones, each box having at the bottom a bed of soft moss, and over the moss was laid a piece of white screen. Upon this the eggs were laid, the greatest care being taken to prevent the eggs overlapping one another. Over the lower layer of eggs was placed another piece of screen, and over that another bed of moss. The outer chest into which the five smaller boxes were fitted, and which was made expressly for the purpose, was constructed with false sides and bottom, the

spaces between being packed closely with sawdust. All the interstices between the small boxes and the sides of the chest were packed with ice, thus preserving the same temperature throughout the journey. Further protection was given by means of thick felt at the top and bottom of the chest. The small percentage of loss was due to the moss falling through in some places, which occasioned pressure on some of the ova. The greatest loss was lost in placing the ova into the hatching boxes, the water, by means of ice being brought to a temperature of 52 degrees. All the damaged eggs were picked out. Dr. Hector visited the gardens and took great interest in the proceedings. He expressed himself warmly to Mr. Farr on the excellent arrangements generally, which he said he would communicate to the Government. So far there is no room for doubt as to the ultimate success of the experiment, at least in Canterbury, and if the other societies who share in the general distribution of the ova are equally careful, the colony generally will be enriched by a most valuable addition to their varieties of fish. Under ordinary circumstances two months would probably elapse before the eggs would be hatched out, but this time will in all likelihood be considerably shortened the water in the hatching boxes being at a higher temperature than that in which the ova were brought from America, the conditions are more favorable for an early development of the young fish. The greater proportion, when sufficiently matured for distribution, will be placed in Lake Coleridge. Mr. Johnson, of Opawa, also received a case of the ova, which arrived in equally good condition. This parcel was brought through by the 6.50 train from Lyttelton, thick rubber blocks being placed under the chest, to lessen the injury from vibration. An additional box also arrived in the same chest, to Mr. Johnson's private order from America.

The colony, in the first place, is greatly indebted to the knowledge and experience of Mr. Clark, of Northville, Mich., who collected and packed the ova, for their safe arrival in New Zealand, and secondly to Mr. R. J. Creighton, of San Francisco, who from the first has shown a keen interest in the success of the experiment.

LIVER-FED FISH.

WE scarcely find a paper in which something is not said of liver-fed fish; and from the general tenor of numerous contributions one would be led to suppose that fish fed on this aliment were not only inferior in quality, but that they were actually flavored with the essence of liver. How frequently we read of the glorious troutings tours by which the participants were enabled to regale themselves on the wild, toothsome brook trout, taken fresh from the limpid waters of the purring brook. So far, very good. Undoubtedly this magnificent little fish can be eaten with relish at all times, and more especially so after exercise in the pure, free, open air. But when, added to all this, I am informed that these native denizens are superior to their cultivated brethren on account of their freedom from the taste of the everlasting liver on which the latter are continually fed, I am led to be permitted to enter my protest. And right here the thought suggests itself. Is not all this assumed difference in the taste of the wild and cultivated fish a mere matter of imagination, suggested from the fact that it is generally known that pisciculturists usually feed their fish on liver? Who is there actually engaged in practical pisciculture that has not, by reason of their frequent handling of liver in dressing, learned to abhor it as an article of food for themselves, no matter how fond they have been of it in the past? Certainly the actual taste of liver has not changed, but the change is only mental. As illustrative of the imagination in producing liver tastes, I will give an incident related to me by Mr. B. F. Shaw, our State Fish Commissioner. It is as follows:—

A valetudinarian and her daughter were staying at the resort of Mr. H. E. Doussan, near a trout-culturist, at Waterville, Wis., where she hoped to regain her health by obtaining the pure country air and feasting on brook trout. For some time the trout were eaten with a keen relish, and the lady was in no way sparing of her praise of their excellent flavor. But unfortunately, after the lapse of some little time, she chanced to read some newspaper, stating how cultivated fish were fed on liver to such an extent that they actually tasted of it. This was too much; she began at once to see that the fish which she formerly relished so much had a liver taste, and began to long for the native trout, which had not thus become contaminated by the skill of man. She made her wants known to Mr. Doussan, who informed her that native trout in that vicinity were quite abundant, and she wished he would take pleasure in substituting them for the cultivated, for which the mother expressed many thanks, and at once relieved her mind from all further thoughts of liver. The native trout were promptly furnished and in course of preparation for the table, when the daughter laughingly entered the kitchen with some of those horrid liver-fed trout, declaring that the cultivated fish were excellent, that she never tasted any liver about them, and that she was determined to ascertain if it was not a mere whim of the mother's. She accordingly prepared both kinds of fish for the table, bringing her mother first the cultivated fish, saying, "Here, mother, are some of your native fish." The mother, after tasting them, said, "There, that tastes like fish; there is no liver taste about this." After finishing these fish with a keen relish, the daughter brought in the native fish, saying, "Here, mother, are some of the liver-fed fish, and see if you can find any difference." The mother, after tasting them, said, "O dear, take them away; I can't bear them; they do taste so of liver." I presume it is unnecessary to state that the old lady left the place soon after discovering her mistake.

In the writer's opinion, many of those persons who can so readily discern the taste of liver in fish, do not discover some disagreeable taste in *Lamellibranchia*, such as oysters, clams, etc., did they know that these were organized creatures, with alimentary canals, stomach, etc., as would also be the case with the native fish, were these parties intimately acquainted with the food consumed by them in their native waters. But let us inquire why should fish fed on liver taste any more of their food than those which are fed on any other food? Is there any substance? There is nothing in good, fresh liver which, when taken into the stomach, generates deleterious gases,

to be absorbed by the membrane of the intestines, and thus carried by means of the absorbents into the blood. The liver is a lobulated gland, and each lobule has its veins, arteries, capillaries, nerves and absorbents. Being thus organized, it has the same means of building its substance and carrying off the impurities as the muscular fiber and other portions of the body. But, it may be said, the liver is that gland by which the bile is secreted, and may not that affect its food qualities? Why should it? Is not this very bile absolutely necessary to digestion? And again, how is this bile secreted? It is from the venous blood, and carried to the gall bladder, which forms its reservoir, which is not used as feed. In chylefication no substances are combined, and thus absorbed into the system, excepting those that are necessary for its sustenance (unless it should be gases); those that are not thus necessary are passed off as the fecal discharge. Hence, in determining the quality of food for a given animal, we must consider its natural food, as to whether it is vegetable or animal, and what ingredients are necessary for its sustenance, as albumen, fibrine, sugar, etc. Now, it has been ascertained by analysis that liver contains albumen, fibrine and casin, and that it elaborates from the blood liver sugar, all of which makes it a most excellent paladium. Of course I do not mean to be understood as advocating liver as the sole food to be used. I believe in a variety of food, but I contend it should be that, principally used, and that there is no article of food that will produce a greater growth or fish of finer flavor. I believe I may take it as conceded that fish fed on liver grow more rapidly than any other. If true, then it follows that the fish must be of fine flavor. Why not? The food is wholesome. Inhabiting clear, cold water, the flesh is firm. The growth being rapid, the fish is fat. The curd small portions of fatty matter between the flakes of the flesh is well developed, and I ask how can your fish be other than of fine flavor?

W. M. A. MYNSTER.

AMERICAN FISH CULTURAL ASSOCIATION.—The ninth annual meeting of the American Fish Cultural Association will be held at the Directors' room of the Fulton Market Fishmongers' Association on the 30th and 31st of March.

The scope of the association has gradually widened. At first it owed its support to trout-risers only, and formed a protective union; to-day it embraces all questions relating to our fish and fisheries, both sea and inland, whether of their culture, preservation, habits, or capture for profit and pleasure, and it has now a membership of over two hundred, comprised of naturalists, fish culturists, fish dealers, fish commissioners and anglers—all of whom are directly or indirectly interested in increasing the fish resources of the country, either by scientific study or practical experiment.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*.
Drum (two species), Family
Sciaenidae.
Kingfish, *Menticorpus nebulosus*.
Sea Bass, *Sciaenops ocellatus*.
Sheepshead, *Acanthurus probato-*
cephalus.
M. pallidus.

Snapper, *Lutjanus blackfordii*.

(Groupers, *Epinephelus nigritus*.
Tautog, *Urophycis bass*, *utrophycis*
atavicus.
Striped Bass, or Rockfish, *Morone saxatilis*.
Tautog, *Urophycis*.
Black Bass, *Micropterus salmoides*.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County, means of access; Hotel and other accommodations; Game and its season; Fish and its season; Boats, Guides, etc.; Name of person to address.

FREE FOR TWENTY-FIVE CENTS.—The following list of lucky fishing days is given to the readers of the FOREST AND STREAM confidentially and free of charge. To all others the Canadian genius who invented it makes a charge of twenty-five cents. He claims, too, that the prediction is well worth the modest price asked for it. All the men who observed his dates last year, now testify to the reliability of the predictions. This year the lucky fishing days will be as follows, water and weather being favorable:—

March 11th, 12th, 13th, 14th, 15th, 16th; April 7th, 8th, 9th, 10th, 11th, 12th, 13th; May 4th, 5th, 6th, 7th, 8th, 9th, 10th, 30th, 31st; June 1st, 2d, 3d, 4th, 5th, 6th, 28th, 29th, 30th; July 1st, 2d, 3d, 24th, 25th, 27th, 28th, 29th, 30th, 31st; Aug. 21st, 22d, 23d, 24th, 25th, 26th, 27th; Sept. 15th, 16th, 20th, 21st, 22d, 23d, 24th; Oct. 15th, 16th, 17th, 18th, 19th, 21st, 22d; Nov. 12th, 13th, 14th, 15th, 17th; Dec. 11th, 12th, 14th.

VERMONT—Sheldon, Feb. 26th.—A few years ago this place was noted for its mineral springs, and still further back as a country abounding in fish and game, but now its glories have nearly departed. Its mineral waters are mostly used for washing purposes. Nearly as good as rain water, old women say. Small speckled trout are to be found in the brooks a few miles back in the interior. The creek which runs through the village now furnishes only pickers fish, but it is supposed to have something better as one of our local sportsmen, Mr. Henry Casseau has made an attempt to stock it with black bass and perch. Franklin Pond, a body of water some three miles by one mile in size, is situated a few miles northeast from here, and at certain seasons of the year gives good sport to the bass-fisher, and good sport the year round to the perch-snapper. A beautiful body of water called Fairfield Pond (Silver Lake) lies a couple of miles southwest from this village. These waters contain speckled trout and land-locked salmon. Its waters are well adapted for these fish, and if protected against pot-hunters, who sweep the spawning beds, it would afford as much or more sport to the scientific fly-fisher than any other body of water of the same size (3½ miles) in the State.

STANSTRAD.

MASSACHUSETTS.—Duxbury, March 1st.—The fishing here in proper season is for cod, smelt, black-cod, perch, fresh and salt water; tautog, trout, pickerel, catfish or horn put, lobsters and the renowned Duxbury clam.

GROUSE.

ONONDAGA FISHING CLUB.—The annual meeting of the Onondaga County Fishing Club, of Syracuse, N. Y., was held last Thursday evening. The old officers were re-elected for the ensuing year as follows: President, Reuben Wood; Vice President, Alexander H. Davis; Secretary, F. S. Wicks; Treasurer, W. C. Anderson. The executive committee of five was also re-elected.

The club resolved to procure young trout from the State hatchery for the purpose of stocking the waters of Onondaga Creek, at an expense not to exceed \$20, the fish to be deposited in the creek under the direction of the executive committee. The club's appropriation for stocking Onondaga Creek is sufficient to secure 30,000 young fry. The efforts of the Association in this direction will be highly appreciated by all who enjoy angling. During the meeting an extract was read from the proceedings of the Onondaga County Fish Club, recommending the work done by the Onondaga Fishing Club in protecting the waters of this county.

TENNESSEE.—Savannah, March 2d.—Our fishing season began last week by a couple of early anglers taking twelve fine bass. They reported the fish sluggish and not inclined to feed. Since then we have had heavy rains, and the streams are full and muddy, preventing fishing. I heard recently of a small fish, unlike any other before seen there, being caught in Buffalo River last month, which was believed to be one of the California salmon put in that stream last March. It measured some four or more inches in length, and was caught on a hook by a "perch fisherman." After being carefully examined it was restored to the stream.

WILL.

MICHIGAN.—Traverse City, March 2d.—Traverse City is fast becoming one of the most popular of summer resorts. Easy of access, both by land and water, it is a place that is the joy of the heart of any sporting man. Here, in their season, you will find deer, rabbit, foxes; brook trout by the million, Mackinaw trout in the bay, black bass in the inland lakes, quantities of pike, and, in fact, almost anything that will help to kill time for the sportsman. Fine hotel accommodations at the Park Place at a very reasonable rate.

FRED.

NEBRASKA BASS FISHING.—Omaha.—I give the first bass caught in Nebraska in 1880 of sufficient size to justify publication. It was taken on the 25th inst., sixteen miles north of this city, and was weighed on the day following on a Fairbanks' counter scales in the presence of several other persons and brought the scales down at six and a half pounds plus. This fish, *Micropterus salmoides*, is the largest one the writer has ever seen, and no doubt the largest ever taken in Nebraska. If a larger one is taken during the year I hope it will be reported to the FOREST AND STREAM.

BOB WHITE.

THE MUSKOKA LAKE COUNTRY.

I would invite every one that could spare the time to try the Muskoka country, Ontario, where fishing and shooting, in their seasons, cannot be excelled. For speckled trout fishing, the South Branch of the Muskoka is A1. The head waters of the Magnetawan River are hard to beat for the speckled beauties, and the Naminatong or South River will hold its own with any of them. Then for muskies, the Muskosh and Moon rivers are first-class, and I can safely say that French River cannot be beaten for muskies, pike and black-cod; and lakes Rosseau, Joseph, Spider, Turtle and Manitowaba, and the hundreds of other smaller lakes cannot be touched in the whole Laurentian country for black bass fishing. In the autumn deer are plentiful, partridge are found everywhere. Moose are killed in the vicinity of Lake Nipissing in good numbers, also wild geese and ducks.

The routes to reach these sections are as follows: Leave Toronto per Northern Railway to Gravenhurst, thence by steamer to Bracebridge, and then by stage fourteen miles to Baysville, on Trilling Lake, for trout fishing on the South Muskoka and North rivers.

For muskies fishing on the Muskosh and Moon rivers, take the steamer from Gravenhurst to Bala. For bass fishing on Lake Rosseau, Joseph and Turtle, take steamer from Gravenhurst to "Pratt's" for trout fishing on the Magnetawan and the Naminatong, or South River, take stage from Pratt's to Magnetawan Village thirty-seven miles, and for South River, stage it twenty-four miles further north to Commodore. For bass fishing on Spider and Manitowaba lakes, take stage from Pratt's to Parry Sound, twenty-four miles; and for French River, take steamer from Parry Sound to French River. And if the sportsman is not too thin-skinned, while the black flies and mosquitoes are browsing around, he will enjoy himself immensely, as hundreds have done before him. Guides and canoes can be had at all the different places mentioned. Any person or party wishing for further information, I will be willing and ready to give it.

Parry Sound, Ont., Feb. 27th.

MCGUFFIN.

THE MUSKOKA LAKES.—Quebec, Feb. 20th.—Editor Forest and Stream.—A very pleasant summer trip can be made at very small expense to the back lakes of Muskoka from almost any part of the Northern States. This country is as yet virgin forest, broken by mountains and dotted with small lakes from the size of a fish pond to some of miles in area. All these lakes are full of gray snail trout from three to nine pounds in weight. The lake of the genuine *Salmo fontinalis*, which, allow me to say, is not a poor liver-fed specimen of his race, but splendid, game fellows; many of them will tackle a balance of five pounds draught. I myself have caught them of this weight several times, and trout from one to three pounds, and so plentiful that they cease to be sport after a time. The route: Go to Toronto, take the Northern Railway to Bracebridge, and from there, including a steamer during latter part of journey (time, seven hours); go from Bracebridge to Baysville, distance twenty miles by wagon, fare according to number of party, average price \$1; take boat to Phillips, at head of lake, fare about same; then get Allen, or Alven Phillips, to guide. They are both first-class men, and know all the country for 150 miles around.

They are hunters and trappers by business, and also make canoe, huckles, maple, etc. Average price for three weeks about \$30 each for party of, say three, not counting fare to Toronto, from point of starting. For a larger party the expense is proportionately less. Of course this amount only covers the necessities; it can be made larger at the option of the parties going. Best time from 15th May to 15th July.

AU SAULE.

PRINCE ARTHUR'S LANDING, ONTARIO.

PRINCE ARTHUR'S Landing is situated on the north shore of Lake Superior (20 miles northeast of Duluth), in the District of Algona and Province of Ontario, Dominion of Canada. It is within eighty miles by water of Nipigon River, the celebrated trout grounds, and may be reached from Duluth by the steamers of the Collingwood or Sarala Lines, two boats of each line leaving Duluth every week during the season of navigation; or the traveler may come by the same lines from either Sarala or Collingwood—these places being reached, the former by the Grand Trunk and Great Western railways of Canada, the latter by the Northern and Hamilton and Northwestern railways of Canada.

There are two first-class hotels at Prince Arthur's Landing, viz: "The Queens," James Flaherty, proprietor, and "The Pacific," John P. Vignat, proprietor. Board from \$1.50 to \$2 per day; reduced rates by the week or month. Sail-boat and wagon may be had for \$30 per day. In addition there are three steamers which may be chartered at from \$15 to \$30 per day, to convey tourists to Nipigon and the outstanding trout streams, of which there are—Carp River, fourteen miles south of Prince Arthur's Landing; Mackenzie River, fourteen miles northeast, and Glendie River, twenty-five miles in the same direction from here, while McVie's Creek empties into the bay in the outskirts of the town, and Current River, two miles from here. On the latter streams good trout may be had by the week or month, then two to three miles. Another creek crosses a colonization road (the Dawson Route) six miles out, and still another river (Needling) crosses the Oliver town ship road six miles out. The latter stream has hardly ever been fished, owing to there being no access to the same till last fall, when the road was built. Of all these streams Carp River is probably the finest fishing, the largest fish having been caught—a four-pounder (trout) being no uncommon occurrence. No licenses are required to fish any of these streams. The trout season may begin in Sept. 1st. Good sport trolling for pickered and pike of large size may be had at any time in the Kaministiquia, three miles from here; while from Sept. 1st to Oct. 1st any quantity of salmon trout may be caught trolling in the bay adjoining and in Thunder Bay.

Partridge and duck shooting may be had, but to a limited extent, from Sept. 1st on to close of navigation; and during winter months curious shooting is to be had within twenty miles. But unfortunately we are almost inaccessible after navigation closes, as we have no railway until the Canadian Pacific is finished will be in three years.

I need not speak of Nipigon, which is already so well known to the numerous readers of FOREST AND STREAM, but I would say this word of warning to those going there, viz:—Never buy ticket to Nipigon, for the steamers seldom call there, although so advertised. The sportsman's best plan is to purchase a ticket to Prince Arthur's Landing only, and if he decides on going to Nipigon to charter one of the steamers or a sail-boat and go from there. There are, however, numerous disappointments as the probability of being carried all around Lake Superior before being landed at Nipigon, if at all.

Provisions and supplies of all kinds, including tents, may be purchased here, but sportsmen would do well to bring their own tackle, as the supply of rods, hooks and lines would not satisfy veteran or even a scientific fisherman.

Indians and canoes may be had in abundance, there being an Indian settlement of 200 six miles from here. Any questions will be cheerfully answered by enclosing a stamp to me at Prince Arthur's Landing, Thunder Bay, Ontario.

GEORGE T. MARKS.

VARNISHED FLY-RODS AND CASTING SIDEWAYS.—Francis Francis is deserving of attention when he talks about the practical art of fly-fishing, and we accordingly reproduce from our English contemporary the following hints:—

I have often pondered on the subject of varnished fly-rods, and wondered why we tamely submit ourselves to the tyranny of tackle-makers on such a matter. Who has not seen the flash of a rod half a mile away? And who has not seen an astonishing thing as a flash of this kind is projected at the water? Any angler who does not fly with ammunition and even to the perception of so shy a creature as a downy old Hampshire trout, is hardly to be expected. What angler of any experience has not often seen trout bolt in a sudden scare up under some weed, or bank when he has essayed to cast for them, where probably they may have been rising rapidly, just previously. And cannot the scare very well be traced, or imputed, to this cause? Any angler who is anxious to catch the eye of fish, than a black mahogany-colored fly, a cream-colored fly, or a fly of any other color, is hardly to be expected. What angler of any experience has not often seen trout bolt in a sudden scare up under some weed, or bank when he has essayed to cast for them, where probably they may have been rising rapidly, just previously. And cannot the scare very well be traced, or imputed, to this cause? Any angler who is anxious to catch the eye of fish, than a black mahogany-colored fly, a cream-colored fly, or a fly of any other color, is hardly to be expected. What angler of any experience has not often seen trout bolt in a sudden scare up under some weed, or bank when he has essayed to cast for them, where probably they may have been rising rapidly, just previously. And cannot the scare very well be traced, or imputed, to this cause? Any angler who is anxious to catch the eye of fish, than a black mahogany-colored fly, a cream-colored fly, or a fly of any other color, is hardly to be expected. What angler of any experience has not often seen trout bolt in a sudden scare up under some weed, or bank when he has essayed to cast for them, where probably they may have been rising rapidly, just previously. And cannot the scare very well be traced, or imputed, to this cause? Any angler who is anxious to catch the eye of fish, than a black mahogany-colored fly, a cream-colored fly, or a fly of any other color, is hardly to be expected. Any angler who is anxious to catch the eye of fish, than a black mahogany-colored fly, a cream-colored fly, or a fly of any other color, is hardly to be expected. What angler of any experience has not often seen trout bolt in a sudden scare up under some weed, or bank when he has essayed to cast for them, where probably they may have been rising

against the sky or cloud? I mean to try something of this sort, but I should like to try that which has the best chance of success.

FRANCIS FRANCIS.

SALMON-POISONED DOGS.—*Portland, Oregon, Feb. 12th.*—In a recent issue of your valuable paper you published an article from your *Corvallis* correspondent in relation to salmon-poisoning of dogs. The writer stated correctly and plainly this strange disease, or rather affection; but in a later article he writes among other interesting allusions to his former article, that he does not know of a case of poisoning by salmon or mountain trout. I have seen such a case, which resulted fatally to the dog affected, but it was from the entrails of the salmon trout. The circumstances are as follows: While fishing in company with a friend in M. Creek, about thirty miles from this city, we caught quite a number of fine salmon trout, and when we returned to the house where we made our headquarters, we cleaned our fish preparatory to packing them in our crates for transportation home; while we were thus engaged, a large and fine-looking deer-hound would come up occasionally and after smelling around a bit, would swallow the offal of as many fish as we had cleaned at the time; he took in all of the entrails of eight or ten of the fish, and then his appetite for them seemed to be satiated. The next morning he seemed unwell, and by noon he was continually coughing and retching, caused, I suppose, by an acute inflammation or irritation of the lining membranes of the oesophagus; his nose was hot and feverish, at times he would drink water with apparent relish, but would soon vomit it up, together with a small quantity of bile, enough to give to the matter thus thrown up the characteristic yellowish color of the above mentioned secretion, and showing conclusively that the digestive apparatus was out of order and one of the causes of the sickness. By evening he was in much distress, his eyes looked sunken and haggard, his coat was ruffled and had lost its gloss, and he began to look emaciated, although in good condition when he partook of the offal, which, by the way, he could not have taken because of any great degree of hunger, as he was well cared for and used more as a watch-dog than as a hunter. As I returned to my home the following morning I was unable to watch the progress of the case, but learned that the dog died three days after I left. I had seen many cases of salmon sickness, and lost two dogs from it myself; one of them a setter eighteen months old, and the other an Esquimaux or Kamschatka dog whose exclusive diet almost was fish—chubs and suckers—which I would catch for him, but when it came to salmon, which I fed him supposing of course that it would not affect a dog who lived, as it were, on fish, he went the way of all good dogs.

MULTINOMAH.

The *Pacific Life*, speaking of this salmon sickness, says that the hunters of California and Oregon prevent the trouble by feeding salmon to nursing puppies, and it does them no harm to eat the fish afterward.

A BOAT IN THREE HOURS.

PUEBLO, Feb. 27th.

Editor Forest and Stream:—

As some of your readers may not have the money to spare to buy, or the conveniences to build a boat, I will describe how, without money, I made one of the best cloth boats I ever saw. I had recently returned from the Upper Missouri and had often been in a "bull-boat," made from the green hide of a buffalo. I lived near some splendid ponds abounding in trout and other fish, and had neither money nor cedar. I found some good hog-head hoops, I selected the best one, and then taking two strips of board fastened them to the keel hoop, which had been opened out so as to form a backbone, bow and stern, to keep it upright. I then got about thirty good barrel hoops and tied them all along with stout thread to the keel hoop, and two more hoghead hoops, which were tied one end of each to an end of the keel hoop, and then bringing the other ends round tied them to the other end of the keel—this made the side or rail. The ends or tops of the barrel hoops were next tied to these rail hoops. This produced a skeleton complete and it looked first-rate. I then pasted some old newspapers together and laid them on the skeleton to get a good pattern, and cut some heavy twilled bed-ticking to it and had it sewed together. This cover was put on and over the frame, and with some old paint I gave it a good thick coat and allowed it to dry in my boat. Thus in three hours, from the time the keel was laid, my boat was completed. The same afternoon I made my paddles, and next morning, although the paint was not dry, I could wait no longer, but, taking it upon my shoulders, was away for trout. I was out in less than an hour, and my first string of trout I caught with it. I used that boat about two years, and sold it to a couple of fellows for three dollars.

G. F. W.

The Kennel.

OUR LONDON LETTER.

TWYFORD, Berks, England, February.

Editor Forest and Stream:—

As I write, though February is well begun, King Winter rules us with his first snow as ever. Water freezes fifty times a day in the kennels, and it is impossible to wash a dog without endangering his life. But for long-coated dogs the daily use of a wide-toothed brush and a metallic comb serves every useful purpose, so long as they get plenty of exercise.

There are, of course, no dog shows of importance at this season in this country, and men are filling up their last winter time by squabbling in the sporting press and pulling each other's dogs to pieces. There is some very hard hitting too, I assure you, for he that is "gentle or simple," none fight with such vim and maliciousness as men of the canine world.

In your impression of Jan. 15th I find a Mr. G., Flushing, L. I., requesting information about a puppy (pointer) with crooked legs. Of course, as you presume, he has been kenneling in a barrow, and trying up his puppy, the legs will have become mechanically crooked. On the other hand, the crookedness may be due to a ricketty condition of the bones. This would, in a sporting puppy, hardly admit of a cure, and the quickest plan to get rid of the disorder would be to destroy the dog. Here are a few facts I have gained by experience: 1. The disease is

most common in high-bred dogs. 2. And in those that have been much bred in-and-in. 3. Cold is often an exciting cause, and especially the cold of a damp kennel. 4. Bone meal and Parrish's chemical food given to the bitch while carrying the pups is a preventive. 5. The treatment consists of plenty of good food, with bone meal in it, iron tonics, cod-liver oil, lime-water and milk, exercise, pure air and friction to the limbs.

In the same journal W. J. P., of Danbury, says his dogs have distemper; that they have inflamed throats, drooping of the jaw, and die in a few hours. This sounds terribly suspicious, for the symptoms W. J. P. names point to dumb rabies in some form. Danbury vets should see to it. I see you prescribe chlorate of potash in the earlier stage of distemper. I'm glad of this, for I myself have found this salt, in conjunction with a little of the bicarbonate and the nitrate of potash, almost a specific if taken, or rather given in time.

I should have mentioned that bone meal is nothing more or less than fresh bones—not tooth-brush handles—well pulverized. I believe I was the first to suggest its use in this country, and it is now generally employed as a natural adjunct to dogs' food. Spratt's firm make it here.

By the way, I have heard a deal more about the new German biscuit farce—"Macdonia plus" or German professor." The story is amusing, and if you'll grant me a corner in your next or next, I'll give it. Meanwhile, I may tell you the English public have not been gulled by this wonderful "cheap food for dogs." May the Lord keep it far away from my kennels, but send me Spratt galore.

I read with great interest an article of yours on bear-dogs. I am full of the writer's opinion when he says the Scotch terriers would make admirable bear-dogs for your canebreakers. I have no knowledge of bear-hunting in the States, but having been out in Greenland for a year or two I have enjoyed some splendid sport with the great Arctic, or Polar bear. He is probably three times as large and at least as fierce as any grizzly I ever read of. But I do not think of shipping any large breed of dog on him. The following account of a bear-hound called Brick is taken from my last book entitled "Ladies' Dogs." It may be of interest to you:—

"Perhaps you never heard of a breed of dog called the Greenland bear-hound. Be it mine to enlighten you. Brick was the most useful dog, either on the ship or on the ice, that I ever met with. He wasn't by any means a large dog. As far as I can recollect, he appeared to be a breed between a large slyke and a Russian retriever. From this you can form some notion of his size, his shaggy coat, his gamesomeness, his pluck and his swimming powers. But it was on the ice after all that Brick showed to the greatest advantage, and fully proved his claim to the rather high-sounding title of bear-hound. Brick had been so often to Greenland that he seemed to know all about everything connected therewith. When his master, rifle in hand and fully equipped, came on deck, Brick jumped at once on to the capstan, and thence sprang upon the doctor's shoulders, and so got safely and scientifically over the side.

"Brick enjoyed the sealing, even when there were no bears about, but at the heels of Bruin, Brick was quite in his element. The skipper assured me that by this dog's agency and his own I can bear at least were bagged every year; and before this voyage was over I had ample opportunity of seeing that this statement was in no way exaggerated.

"A large dog would have had no chance with a Greenland bear—not the largest dog that ever walked on four legs; for any dog of large breed would instantly close with the bear, and be torn to pieces in a few seconds. But Brick knew a trick worth two of that.

"When this dog saw a bear upon the ice he at once gave the alarm, and then went after the enemy like a streak of greased lightning." And here was Brick's method of bear-hunting. When Bruin ran, Brick bit Bruin's heels. Bruin, enraged, wheeled round to demolish Brick. Brick laughed in Bruin's face, keeping out of the way all the same, so Bruin lost precious time, and the guns got in.

And not to conclude this short letter by mentioning another matter. The dogs I have sent out to the States have given great satisfaction. This gratifies me much. In numbers they have been few, in quality good. The seeing of a dog fairly started causes me no small anxiety, expense and trouble. Were I less sensitive in mind I might avoid this by starting the animals from my own stables. King Charles, I feel, but terriers so like that I wouldn't sleep for a week. So I make the journey (thirty-three miles) to London the day previous to the vessel's sailing, cab it over the city, and train it next morning to the docks. Then there is the butcher—not only to pay, but often to bribe. I also never fail to make friends with some kind-hearted passenger, who, as a rule, promises delightfully to look after the export. Having seen the ship off, I've done all I can. But I often wish I were going along with it. And so I have promised myself in June or July a little run to New York, Baltimore, etc., to see how dog matters stand in the States. This is a chance I think your readers who may wish good pedigree dogs should not miss. The dogs I really can get good for them at reasonable prices are as follows: English, Blenheim, King Charles, I feel, but terriers (either border or highland), collies (the most fashionable dogs in England), dachshunds, terriers (any kind), mastiffs, St. Bernards (they are high-priced, though), Newfoundland, retrievers, pugs, monster Danes, pointers and setters. I don't advise anyone to import. Cocker is very difficult to get. Deer-hounds, fox-hounds and blood-hounds are procurable, but certainly not cheap. Any information wanted I shall be glad to give.

GORDON STABLES, M. D., R. N.

TWO ANECDOTES ABOUT COLLEY DOGS.—Over forty years ago there was a delightfully illustrated book published in London by Edward Jesse, author of "Gleanings in Natural History," from which we reproduce the following accounts of the wonderful instinct of the now fashionable colley dog:—

The owner of a sheep dog having been hanged some years ago for sheep-stealing, the following fact among others respecting the dog was authenticated by evidence on his trial. When the man intended to steal any sheep he did not do it himself, but directed the dog to do it.

business. With this view, under pretence of looking at the sheep with an intention to purchase them, he went through the flock with the dog at his heels, to whom he secretly gave a signal so as to let him know the individuals he wanted, to the number of ten or twenty out of a flock of some hundreds. He then went away, and, at a distance of several miles, sent back the dog by himself in the night time, who picked out the individual sheep that had been pointed out to him, separated them from the flock and drove them before him by himself till he overtook his master, to whom he relinquished them.

These creatures perform such acts on the Scottish mountains in regard to the guidance and direction of flocks that they are utterly incredible without being seen, and nearly incredible when they are. The waving of a shepherd's arm at a distance far beyond the sound of voice is sufficient to regulate all their movements; and you may see them a mile or two off, on top of the hills, obeying every gesture of their master, pointing out various and complex operations. Mr. Jesse affirms that he saw a colley once in Perthshire taking a flock of sheep to Falkirk Tryst or Fair; and as the road was dusty he chose to indulge his charge occasionally with a bit of green walk and nibble. To accomplish this, where he observed a gap in a hedge he bounded into the field and ran on to the far extremity of the route; if he found an opening there he returned and drove the sheep into the pasture to pick up a little on their way; if not, he occupied the gap and resolutely denied them entrance, driving them, with barking, along the turnpike road.

NEW YORK DOG SHOW.—In addition to the names of the railroad companies given last week, letters have been received from the following roads, saying that they will carry dogs free to and from the show, to be accompanied by their owners: Great Western R. R. of Canada, Wm. C. Edgar, Gen. Pass. Agent.

New Jersey Midland R. R., J. C. Anderson, Gen. Pass. Agent.
Wabash, St. Louis and Pacific R. R., H. C. Townsend, Gen. Pass. Agent.

Canada Southern R. R., Frank E. Snow, Gen. Pass. Agent.

Philadelphia, Wilmington and Baltimore, G. A. Daddam, Gen. Pass. Agent.

Grand Trunk R. R. of Canada, W. Wainwright, Gen. Pass. Agent.

Atlantic and Great Western R. R., W. B. Shattuc, Gen. Pass. Agent.

Old Colony R. R., J. Sprague, Gen. Pass. Agent.

Old Colony Steamboat Co., G. L. Conner, Gen. Pass. Agent.

Providence and Stonington Steamship Co., L. W. Filkins, Gen. Pass. Agent.

The following Express Companies will, on the payment of their usual rates to the show, return dogs free: American, United States, Del. L. & W. and the "New" Express, but it must be distinctly understood that the companies take no risk, and dogs to be returned free must receive a certificate saying they have been exhibited at the show and paid the rates to the show.

The applications for blank forms have been very numerous from all parts, indicating that the show will be very large.

JUDGES.—Mastiffs, St. Bernards, Irish water spaniels, clumber and cocker spaniels, fox-terriers, bulldogs, bull terriers, pugs, Dandy Dismonts, terriers and Yorkshire field, English.

Newfoundlands, Siberians, grey-hounds, deerhounds, dachshunds, collies, King Charles and Blenheim spaniels, Japanese spaniels, Italian grey-hounds, Scotch terriers, Skye terriers and toy terriers—Dr. Gordon Stables, Surgeon Royal Navy, England.

Native English setters, S. T. Hammond, Esq., Springfield, Mass.; Hon. John S. Wise, of Virginia, with Hugh Dalziel as referee.

Imported English setters, black-and-tan setters, red Irish setters and pointers—Hugh Dalziel, Esq.; S. T. Hammond, Esq.; Hon. John S. Wise.

ENTRIES FOR THE DERBY.—*New York, March 9th.*—The following entries for the Field Trial Derby of the National Animal Kennel Club have been received up to this date: Black and white ticked setter (same parentage), Dashing III., Dora II., Dashing Jewell (Dash III., Phoebe); liver and white ticked setter dog Dashing Jerry (Dash III., Phoebe); black and white ticked setter dogs Dashing Joker and Dashing Joe (same parentage); Count Dick (Dash III., Countess II.), Count Tick (Drake-Vesta), Count Tell (Drake Ada); black and white ticked setter bitch Countess Clydie (Dash III., Countess II.), Countess True (Drake-Countess Ada). All the above entered by the Harvard Kennel Club of Boston, Mass. Cecile (Mordford's Don-Raymond's Fairy), orange and white setter bitch, entered by Mr. Robert Sewell, New York City; Duke of Austerlitz (Guy Manning-Abbey), setter dog, and Ballyhale (same parentage), setter dog; Bellina (same parentage), setter bitch, entered by Mr. B. C. La Montagne, New York City; Lady Caprice (same parentage), setter bitch, entered by Clas. De Ronge, Short Hill, N. Y.; Prye and Rock (Don-Fairy), setter dogs, entered by Mr. Theo. Morford, Newton, N. Y.

CHAS. DE RONGE, Sec'y N. A. K. C.

COCKERS FOR WOODCOCK AND GROUSE.—*Hornellsville, N. Y., March 8th.*—I have had some experience with dogs for grouse, woodcock, squirrels, etc., and I have learned this fact, that a cocker spaniel is the best. In fact I believe a cocker spaniel is the best dog for general use there is. They are not too large to keep in the house, are good watch dogs, are faithful and kind to children, and can be taught all kinds of tricks easily. They cannot be beat on ruffed grouse and woodcock. They hunt and retrieve naturally, and will run rabbits good (although I never allow mine to do so). I do not think it hurts them to tree squirrels. They do not need from six to twelve hours of training before they are fit for anything. A cocker will do good work when six months old. I find one last summer which was not five months old. I find one last summer which was not five months old. I find one last summer which was not five months old.

esultant and tradition, as well as 9, 7, 5, 3, 1. If we are to change our scoring for a better and fairer method, why not change our target colors as well, and adopt the best combination without reference to sentiment or tradition?

All archers who use the longer ranges know that beyond sixty or seventy yards the apparent diameter of the target is so reduced as to practically prevent aiming distinctly at the gold. The aim is at the target as a whole, because the colors are so blended and reduced by distance that the aim must be at the target, and not at any small portion. At eighty yards, to aim at the gold and to aim at the target are, in ordinary daylight, synonymous, while by gauging the same effect results at a nearer distance.

Now, if, instead of the gold with its concentric colored circles, we should face our targets with white canvas having a central spot of black ten inches or a foot in diameter, and the remaining space divided into four rings of equal width by narrow concentric lines of black, should not we not have a mark which, at any distance, would offer one well-defined, prominent center for our aim? And such a target, numbered from 5 to 1, would be available in all places, and to a large degree destroy the undue value of chance hits. S. S. R.

OHIO STATE ARCHERY ASSOCIATION.—The Executive Committee, and the delegates of the various archery clubs throughout the State of Ohio, will convene at the Gibson House, Cincinnati, Ohio, on the 17th of March, for the election of new officers, etc., and select a place for the holding of the second Grand Annual State Tournament. Clubs throughout the State that do not yet have members of the Ohio State Archery Association should make application at once to the Corresponding Secretary, Mr. Chas. Welker, Cincinnati, Ohio.

Cricket.

COLUMBIA COLLEGE CRICKET CLUB.

It is very gratifying to state that the Columbia College Cricket Club, of this city, is in a fair way for success. The membership will be largely increased this coming season, and a genuine spirit and interest will be aroused in the college thereby. We may say that the past season was as successful as could be expected under the circumstances, and we cannot compliment Mr. G. Hyde-Clarke too highly for the fact which he has shown in bringing about such an excellent result. In the championship of cricket in the college there has been due entirely to his perseverance. He is an excellent captain and he possesses a full knowledge of the game. The club was organized last spring after the first match, on May 31st, versus an amalgamated first and second eleven of the Statist Island; it was then that Mr. Hyde-Clarke was elected President and Captain; Mr. J. P. Conover, late from St. Paul's School at Concord, N. H., Vice-President; Mr. W. F. Morgan, Secretary-Treasurer. Out of the whole college just eleven men took up the game, of which four had never played cricket before, and most of the others but very little; in fact the only three that had played regularly were Messrs. Hyde-Clarke, Conover and Egan. Besides these there were the two Morgans, De Forest and Emmet, who had played at school; and the rest of the eleven, Herrick, Barnes, Torrey and Weaver, who had never played. The regular bowlers were the three first-named, while Morgan, St., Barnes and Weaver were tied at different times. In the batting averages Hyde-Clarke came first, followed closely by Egan, both securing double figures. Conover did not play up to his standard, while the two Morgans and De Forest showed the most expert batting. The fielding was generally fair at all times, Conover and Torrey especially distinguishing themselves in this line. Herrick made runs in Philadelphia in the Pennsylvania University match, as did also Barnes; but the style was essentially base-ballish. All hands showed their intention of becoming cricketers by practicing regularly. The short season in the autumn being particularly encouraging, the old team not only turned up again, but many new hands taking hold, and we expect there will be no little competition for places on the team this spring.

The one inter-college match was the one alluded to above with the University of Pennsylvania, the Philadelphians winning by 82 runs. For Columbia College Hyde-Clarke secured 16 and 10; Egan, 15 and 14; Herrick, 6 and 10, and Barnes, 1 and 15, not out. The principal scorers on the University side were J. B. Thayer, 14 and 38, and G. Murphy, 11 and 43, Thayer and Hyde-Clarke doing the best with the ball. The University eleven will be invited to visit New York in June of this year, and the match will become an annual fixture.

To promote the desired interest it is proposed that the eleven should take a trip to Albany, Boston and Concord before the match versus Pennsylvania University takes place. As it seems impossible to convince the Central Park Rip Van Winkles that the college boys will do no harm to the turf which was originally laid out for the use of the cricketers of New York City, it is expected that the St. George's Club will share their ground at Hoboken, N. J., with Columbia College this season.

PUBLISHERS & COMPANY.

ROCHESTER STILL AHEAD.—A FIRST PRIZE TAKEN AT THE WORLD'S FAIR BY A ROCHESTER FIRM.—The World's Fair of 1876 was held at Sydney, New South Wales, the principal city of Australia. Exhibits were there from all parts of the world, including those from the largest and best known cigarette and tobacco manufacturers. Notwithstanding the many varieties of German, Russian, French, English and American cigarettes and tobaccos on exhibition, the display of cigarettes, Vanity Fair tobacco, etc., made by W. S. Kimball & Co., of this city, was awarded the first prize. The New South Wales cable-gram from Sydney yesterday announced this fact. This is a triumph for Rochester and its manufacturing industries. Six first prizes have heretofore been won by Kimball & Co., at great exhibitions, this making the seventh.—*Rochester Democrat and Chronicle.*—[Adv.]

AN EXCELLENT OUTFIT.—The Boston shooting suits advertised by G. W. Simmons & Co., have been in use for years all over the country, and have received the unanimous indorsement of sportsmen. The man who invests in them will be repaid ten times over in comfort.

BETTER TIMES.—The business revival and new era of prosperity which is now fairly inaugurated, is in keeping with the increased health and happiness seen all over the land, and is one of the results obtained from the introduction of Chamber's Kidney and Liver Cure. "The changes wrought by this remedy," says Rev. Dr. Harvey, "seem but little less than miraculous."—[Adv.]

Answers to Correspondents.

Correspondents who may send us their proper name and address will always receive prompt attention in our columns. We require a man's name for two reasons: (1) sometimes as a guarantee of good faith, and (2) always as a matter of common courtesy. As a rule we do not reply to inquiries by mail, except in cases demanding immediate advice.

J. M. C., New York.—See another answer.

F. W.—Have written to the Treasury Department for the information desired.
St. James, Danville, N. Y.—The Baltimore Hench Show was held in 1878, April 23d to 26th.

J. F., New York.—We should advise you to take a Winchester rifle for grizzly bear shooting.

J. S. G., Union Church, Miss.—We shall be pleased to publish your club scores. There is no charge.

R. S., Vernon, N. J.—Quail can be bought of Messrs. Whitley & Morris, 218 Washington street, New York.

E. W. M., Philadelphia, Pa.—The choice between the guns is, a matter of taste, as also the style of action.

J. W. Patchell, Wis.—There is no book especially prepared for a game-score book. You may use an ordinary blank memorandum book.

F. M. W.—To preserve tents from mildew apply the recipe published in the "Cabin Locker" of our yachting columns, issue Feb. 26th. To apply paraffin, melt it and apply while hot.

J. M. D., Jr., Yale College, New Haven.—Good duck shooting near New York may be found on Long Island. See the reports in our game columns.

FORESTING.—You may find grouse and quail shooting in Maine in the fall. Go in September or October. The season extends from Sept. 1st to Dec. 1st.

P. S. W., Clarion, Pa.—For Cones' book see our Natural History column. 2. Tell us where you want to go duck shooting and we may help you.

C. D. L., Swedesboro, N. J.—The trout fry advertised by Thompson Bros. of Aqueduct Ponds, New Hope, Pa., will do well in your ponds, and we should advise you to try them.

Don WHITE, Omaha, Neb.—You are mistaken about our prize. We did not make such proposition, but we shall be glad to hear from you nevertheless.

T. D. McAl, Middletown, O.—Conlin left this city publishes his own targets, and you may procure them directly of him. Write to James S. Conlin, Rite Gallery, Broadway, New York.

A. S. H., Van Ettenville, N. Y.—You will find instructions in fishing and hunting in Hallcock's "Sportsman's Gazetteer." For small game also consult Bogardus' "Field, Cover and Trap Shooting."

F. B. J., Plattsburg, N. Y.—1. We cannot tell the pattern whether your gun is full-choked or not. 2. You can safely use the 5-dram powder, 14oz. shot, but you will find it probably too much for your shoulder.

B. L. F., Boston.—We know nothing of any such gun manufactured in England. By writing to the advertisers of this style of gun you will receive describing setting forth what is claimed for it. We shall shortly discuss the subject.

St. ELEAN, Rochester, N. Y.—In what class in the coming show should I enter my white and black ticked setter bitch Pearl, by Whitman's Grouse, out of Valentine's Nellie? Ans. Native English Class.

C. C. B., Washington, C. H., Ohio.—Will you give me in brief the characteristics of the Beltonstrain of setters? I have one by imported Belton, said to be out of imported Rose. Ans. See FOREST AND STREAM, Feb. 14th, 1878, and Feb. 5th, 1880.

B., Baltimore.—Please inform me whether there is any work which treats of sport with rod and gun in California. Ans. None that we know of. The files of the FOREST AND STREAM contain articles concerning almost every kind of California sport.

B. W. B., New York City.—The address of man asked for, the trainer, is Downville, R. I. His charge for breaking is \$12 per month, with the understanding that he is to have dog one year.

KINGS COUNTY.—We publish the article elsewhere, and should have rendered unto Caesar the thing which belongs to Caesar did it bear his supererogation. You will greatly oblige by sending us the omitted address.

C. B. M., Alleghen, N. C.—The Winchester, '73, is as accurate as any gun carrying the same charge of powder and lead. There can be no question as to its accuracy at 200 yards. The price of gun asked in round barrel is \$34; in octagon barrel, \$37; both models, '76, 45-60.

A. S. S., Philadelphia, Pa.—You may find the picture, "A Friendly Service," by consulting some of the dealers in pictures and prints. We have no means of ascertaining its author. The cut in the FOREST AND STREAM was reproduced from an engraving in a French sporting paper.

J. W. M. and O. H. J., Boston, Mass.—1. We know nothing of the revolver. 2. You will not find any shooting in Nova Scotia in July and August. Later you may have moose, caribou, partridge, woodcock, snipe and teal shooting. Non-residents are required to take out license fee, \$20.

L. M. L., Thunderside, Pa.—Write to Dr. Gordon Stables, Twyford, Berks, England, who can procure the dog you wish at a reasonable price. Dr. Stables will visit this country in the early summer and intends bringing over a number of selected dogs of different breeds.

C. W., Minnesota Junction.—We know nothing of the book you inquire for. If you wish instructions in shooting, buy Bogardus' "Field, Cover and Trap Shooting." The firms whose names you will find in our advertising columns, publish catalogues of their goods. If you send for these and consulting them, you will find a choice of firearms.

R. M. B., Philadelphia, Pa.—1. For 12-caliber, 5 lbs. gun, use 2 to 3 lbs. of powder, 14oz. shot. The ordinary powder you will find satisfactory. 2. If your gun is choke-bored, it will have stamped on the barrels "Not for ball." 3. If a cylinder-bore, you may safely have it converted into a choke-bore. Squires, No. 2 Cortlandt street, will do it. Cost, \$2.50 per barrel.

PONCE, Alameda.—It is true that the pressure of water in a vat depends only upon the height of the column, and not upon the mass. The pressure upon the sides of two vats 9 feet high, one 3 feet diameter, and the other 9 feet diameter, is alike; but the

vat of smaller diameter is a much stronger structure, so the one of larger diameter will require stronger hoopings, or internal bracing.

ROYAL, Belvidere, Ill.—I have owned and seen many revolvers that will not revolve, on account of the cartridge expanding backward against the frame of the revolver. Have experimented and cannot determine the cause of the trouble. Ans. Good makes of revolvers do not give this trouble. You must have purchased an inferior weapon. It is impossible to explain the trouble without seeing the arms.

C. M. B., Bedford, N. Y.—My Newfoundland pup, six months old, occasionally steals eggs. Will you tell me the best way to cure him of such a bad habit? He is whipped every time he does it—every time at least that he is found out—but still once in a while he will do it. Ans. If you punish him severely it ought to remedy the trouble. Be sure that the dog knows what he is whipped for. Sometimes an egg partly blown and then filled with red pepper will destroy the egg appetite.

A. B. S., Placid.—Please give me advice as to my beagle puppy eight months old. He has been running a great deal lately of nights, and is quite sick. He seems to have a kind of stiffness all over. Whenever he is touched he seems in pain. He refuses all food. Ans. Doubtless your dog is suffering from rheumatism. Warm, dry bed, no meat except boiled liver for a week or two, and twenty grains of bicarbonate of soda three times a day, dissolved in a little water; also give a dose of castor oil.

C. F. W., New York.—Most taxidermists wash their specimens with cold water, and then, hanging suspended them with a dry cloth so as to remove as much of the moisture as possible, lay in dry plaster of paris, and dust it through the feathers. The washing should be done after the skin has been taken off. Blood and grease stains on old prepared skins can sometimes be removed by adding a little soda or spirits of kerosene to the water, but it is always a difficult matter to cleanse skins that are thoroughly dry.

H. B. HOPE, Toronto, Canada.—Can you inform me if the copper or copperhead snake is very venomous and plenty in Michigan, on the border of the St. Clair, or is it only a bug-bear of the masses, as was the case with the rattlesnakes on the islands of Niagara River (Navy Island)? I shot there two July and found a few woodcock and one thousand wood-tick, but no rattlesnakes. Ans. We have no knowledge on the subject, but presume the snake is not abundant there. Perhaps some of our readers can inform you.

W. B., Philadelphia.—You might add to your collection "The Dog," by Istone; "The Setter," by Edward Laverack; "Yonout on the Dog;" "The Dog," by Dinks, Mayhew and Hutchinson. For a book on dog handling we have never yet seen anything as good as Hutchinson's "Dog Breaking." Messrs. Cassel, Pettor, Galen & Co., 66 Broadway, New York, are publishing a most complete and excellent serial termed "The Illustrated Book of the Dog," by Vero Shaw; it should be in the library of every sportsman.

TRAP, Princeton, N. J.—In a pigeon match from H. and T. traps, placed say fifteen yards apart (the shooter not to have which trap is to be pulled, A goes to the score. By inadvertence of the puller both traps are pulled simultaneously. A fires and kills with first barrel, in bounds; with second barrel kills the other bird, but out of bounds. Now the trap which was to have been pulled was H. trap, whereas the bird killed in bounds came out of T. trap. The referee decided it a missed, or dead out of bounds bird for A. Do you think he was right? Ans. No. A should be given one dead bird.

G. C. S., Middletown, Pa.—To make bird lime: Boil down linseed oil of the best quality until it becomes thick and glutinous. Boil in canvas, in open air, for ten or twelve hours, and be sure that the cover of the pot fits tightly, so that the oil will not catch fire. When boiled, set away in tin vessels with tight-lining covers. To use it: Select small, dry sticks, as thick as a straw and eight inches long. Sharpen the edges, smear them with the lime, and fasten the sticks into grooves cut in a stake stuck into the ground. Place a "call bird" as a lure. When the birds alight upon the sticks they pull them out from the main stake, and when flying, the wings, coming in contact with the lime, are pinioned to the sides.

J. M., New Haven, Conn.—I have a valuable pointer, two years old. Although his nose is cold and moist, his eyes and nose run a kind of mucus, and he has a rough, no appetite, and what he does eat throws out, in open air, for ten or twelve hours, and be sure that the cover of the pot fits tightly, so that the oil will not catch fire. When boiled, set away in tin vessels with tight-lining covers. To use it: Select small, dry sticks, as thick as a straw and eight inches long. Sharpen the edges, smear them with the lime, and fasten the sticks into grooves cut in a stake stuck into the ground. Place a "call bird" as a lure. When the birds alight upon the sticks they pull them out from the main stake, and when flying, the wings, coming in contact with the lime, are pinioned to the sides.

C. V. E., Boston, Mass.—The pedigree of the pointer bitch Belle, owned by Mr. George C. Colborn, of this city, is as follows: Belle was whelped June 23d, 1870, shipboard; is of medium size, and is red and white. Her sire, Iddo, also lemon and white, was sold, and went to India; he was sold to be first class in the field, her dam, Belle, No. 1043, E. K. S. B., was whelped 1865, bred by Mr. Wilson, and sold to Mr. F. B. Burvan, Western Reporter, Southampton, Eng., who in turn sold her to Mr. Ross, who brought her to this country. In color she was liver and white. Both sire and dam are of the Lang strain, and also include the strains of Mr. Edge and Lord Derby.

O. T. S., St. John, N. B.—1. The firm we have investigated and find to be fraudulent. 2. The recipe for terrier soup is as follows:—It is furnished by Mouquin, the famous caterer of Fulton street, this city: After the terrier has been killed, put into boiling water for ten minutes. Then take off the skin and cut up into small pieces, being careful not to break the gall bladder. Stew in a little butter, adding a bouquet of carrot, leeks, bay-leaf, one onion with cloves, and a ladle of broth; glass of Madeira wine. Let the whole stew slowly on covered range. Before serving, add a sliced lemon and a hard-boiled egg cut into small pieces.

CONSTANT HENDER, Brooklyn, N. Y.—A friend of mine and myself start on horseback and riding from New York to Colchester, Conn. As we might stay out over night I should like you to say what we had best take. Of course, we want to make it as light for the horses as possible. We each have a rifle; should we carry them? Should we carry fly-rods? Where can I get a book which will give me the principal roads from New York to Colchester, or from New York to New Haven? Ans. Go to a hotel or farmhouse at night. You will want a good civilized bed after riding all day. Leave the rifles home; the traips won't trouble you, and Sitting Bull is not on the war-path. The fly-rods, however, may come into good service. For map of country try the Coltons', William street, New York.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

No. 111 FULTON STREET, NEW YORK.

[Post Office Box 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 11, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guarantee of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

NOTES.—By request of Prof. Baird, Mr. Walter Brackett, of Boston, will send his famous salmon pictures for exhibition at Berlin.

At the meeting of the New York Association for the Protection of Fish and Game, last Monday evening, it was decided to have one good bill drawn up by the Association and its enactment at Albany attempted. In this way the game legislation will be taken out of the hands of incompetent or interested parties. The bill will be prepared at once and published in the newspapers, so that the public may have an opportunity of judging for themselves of its merits.

The Adirondacks are popularly supposed to have been fished out. Many a summer visitor to the North Woods has been disgusted by the scarcity of trout and the obtrusiveness of the tin can and the paper collar—two of the modern traces of semi-civilization. Yet there are regions where one may find abundance of game and fish. Some of these localities are designated on our first page to-day.

Duck shooting is fairly inaugurated in the Eastern and Middle States. Excellent reports come to us of the flights of birds. We invite our friends who have success with the ducks to send us early reports of the same. We should also be pleased to hear of the game prospects of the country.

"Wallace's Guide to the Adirondacks" is the standard. Intending visitors to those regions should provide themselves with it. We furnish the book. Price \$1.50.

The *Herald* Irish Relief Fund is developing some curious phases of charity. Next Saturday evening, at a hall in this city, the exponents of the manly art are to give a benefit in the good cause, when "Dangerous Jack," Paddy Ryan, Pete McCoy, and others, will punch each other's heads in aid of old Ireland.

PERSONAL.—Mr. John Harvey, of the Harvey Shipbuilding Co., Wivenhoe, England, left for home by the *Parthia* yesterday. Mr. Harvey, during his stay in America, won many friends by his affability and genial disposition, and his views upon yacht design we found as broad and liberal as they were intelligent. We had the pleasure of examining a fine lot of models he brought with him, including those of that peerless trio, *Seabelle*, *Miranda* and *Jullanar*, concerning which a book might be written. The models and plans drew forth praise from all who were fortunate enough to obtain a view of them.

THE MUTUAL INTERESTS OF FARMERS AND SPORTSMEN.

THE right side of the much-vexed question of game protection certainly and always is the due protection of game at all times, both when the law forbids taking game and when it allows it to be taken. The right side also includes the use of none but fair means of taking game and in fair quantities.

The article in a recent number relating to the game of Long Island and its former abundance and variety, and the present deplorable scarcity, with some of the causes which have led to it, and the best means of renewing, or at least of augmenting the supply to a reasonable quantity as much as present circumstances and careful management may secure, was a very attractive, luminous and readable sketch. Yet it suggests two points which may be urged courteously and amicably in a few words, as in fact the writer of that article may himself have it in his own mind to suggest in a future article. These suggestions, too, are by no means confined to Long Island, but are equally applicable to the whole Union. They are: 1. The means of protecting feathered game by the aid of the farmers. 2. The limit of slaughter which sportsmen themselves will set to their own pleasure.

Now, first, the means of protecting feathered game, particularly young birds, till they are of proper strength and size to have a fair chance for life, or a fair share of them to renew and perpetuate their race, is a most vital point. Omitting at present the discussion and even the mention of all other means, there is one precaution and protection which of itself alone would suffice abundantly to enforce thoroughly all the game laws, and in fact go far beyond the scope of the laws—namely, such a uniform system and policy on the part of all sportsmen as will give all the land-owners a warm and steady interest in raising and sheltering and defending all the broods of young birds on their farms. If all the farmers on the Island were one and warmly one in this matter the work would be done up thoroughly, for they are lords of the land.

In very many instances, as matters now stand, farmers and gunners are not friends in these matters, and have no interest to befriend each other. Without going closely into particulars—which in fact is not necessary—the fact is that there are gunners who are brutes and wild beasts when their gunning-fover is at the height, and who, like so many Malays running a-muck, will recklessly trample down crops in a ten-mile walk, damage and exasperate the farmers all the way; perhaps if accosted, and that in a proper way, insulting or damning the farmer, or to the quiet or alarm of his wife and daughters shooting into his doves, possibly while the doves are near the house or on the home lot or on the barn roof. Such gunners come out from the cities every year and are a disgrace, and worse yet, a great injury to all the real gentlemen who like now and then to handle a gun in the right way and time. One is an offender, and the next ten are blamed and hated on account of this one.

Let all the farmers and their sons and hired men find it pays them to protect birds and they will do it and satisfy all parties. The gunners are willing to pay for their sport more than the pittance of ten cents a quail, which a sly and stingy baggage-master hands out secretly to the trapper. The dime is a bigger coin to the hard-handed farmer's boy, scant of spending-money, than a quarter is to many a sportsman. Let all parties understand each other and the birds will be left undisturbed, and will be carefully protected till the honorable gunners come at the appointed time and pay for the sport that is then and thus guaranteed them on good grounds, something as in the old country, but in the right way for American citizens. The practical details ought not to be at all difficult to arrange in most parts of the Island, nor in other sections of the country. But if some farmers are dogs in the manger—do not shoot nor let others shoot on their farms—all the better, for there will be safe harbors, secure game preserves, where the birds will come up to full strength, and from which they will take wing, to be shot elsewhere or to procreate another generation.

Secondly, the limit of slaughter. It is an axiom which nobody can deny that there must and will be some limit to the number of birds that any decent and provident sportsman will kill under the greatest temptation, for the more birds there are killed one season, of most varieties except sea fowl, the fewer will be left to breed and replenish the stock for the next season. "A mass of putrefaction," says the writer to whom we have referred—the splendid woodcock ruthlessly butchered to satisfy the killing mania, not to be eaten by the gunners, not to be given to friends, not even to be sent to invalids in hospitals if nothing better occurred, not even to be sorry for, least of all to be left to increase and multiply an ample quantity of birds for the same or other gunners in future. Of course the writer meant to explain it with a good reason, but failed to explain, and there it stands, sickening, "a mass of putrefaction." No wonder the farmers dislike, despise, abhor and oppose such a waste and greedy butchery.

The remedy ought to be no very difficult matter, namely, by establishing among sportsmen a public opinion to re-

strain wholesale killing of game and killing of all prospects of future game therewith, and it is to the encouragement of such a sentiment that the FOREST AND STREAM is lending its influence. It ought to be settled that no true sportsman will kill merely and solely to kill; that such a spirit is cold-blooded cruelty, which has not the excuse of the hot-blooded criminal, for he often repents bitterly and does works meet for repentance. If the gunner would always pay for the birds he shoots, and if he shoots only what can be properly used, the farmers of the Island and the State and the Union, in a vast majority of cases, would welcome such gentlemanly gunners, and perhaps be proud to rank among them as warm friends of fair and lawful sport.

These two points, upon which we cannot too strongly insist, are of vital interest to many thousands of men, whose interests in the matter are really identical in the long run, if only regarded in the proper light. But if the farmers are expected to protect and support and favor quail and meadow larks, in order to let mischievous or butchering gunners kill ninety-five out of every hundred, without thanks or pay, perhaps with serious damage to crops, temper and comfort, the sport is rather too one-sided. Rather let mutual arrangements be made to equalize it and to harmonize it all around.

THE INTERNATIONAL FISHERY EXHIBITION.

THE exhibition which opens in Berlin on the 20th of next month is not one which will attract crowds of people from all parts of the world to revel in sight-seeing and other holiday indulgences, but its importance, from a commercial, scientific and fish cultural point of view, will prove to be far beyond what those who are not familiar with our fisheries would imagine it to be capable of. At this gathering of the fishery products of all nations we have much to show the people of other countries in the way of preserving fish-food in all its forms of dried, salted, canned, smoked, put up in spices, in oil, refrigerated, caviare, "extract of fish," prepared baits, etc., as well as much to learn. The same can be said of improvements in modes of capture both by the commercial fishermen and by anglers; our display of rods and fine tackle will probably be unexcelled, while in the matter of methods and apparatus used in fish culture it is only necessary to say that nothing is lacking in this department, from which other countries have long borrowed from us.

The exhibition will be the means of comparing our products with those of other countries, of introducing such of them as prove to be better or cheaper than others, and of bringing those which may be inferior up to a higher standard. As the American exhibit is to be made under the direction of Professor S. F. Baird, it is certain that it will be more full and creditable to the country than could be made by any one not having the resources at his command. We know that Professor Baird, having the fishery statistics for the census of 1880 upon his hands, and the building of the fish-hatching steamer *Fish Hawk*, in addition to his duties as Secretary of the Smithsonian Institution, and Fish Commissioner, was not at all anxious to make a display at Berlin; but the persistent requests of the German Fishery Association through our Minister at Berlin, Mr. White, finally moved Congress to action, when, as a matter of course, the arrangements were placed in the hands of Professor Baird, who, notwithstanding the limited time which intervened between the passage of the bill making the necessary appropriation for this purpose, and the date of the opening of the exhibition, has, by the aid of his corps of trained assistants, gathered all that was not already in the Smithsonian collection, and will have a display which few countries outside of Germany can equal.

The enormous strides which have been made in these directions by our country within the past fifteen years may be partly realized by the fact that at the International Fishery Exhibition held at Bergen, Norway, in 1865, the United States was represented by barely one exhibit. Then fish culture was an experiment here, and few preparations of fish were in the market, except salted mackerel and dried cod, while now we could not enumerate them all within the limits of this column, not to mention the display which will be made of netting, boats and all the implements in use. Mr. E. G. Blackford, of Fulton Market, and one of the Fish Commissioners of the State of New York, will send over fish in ice, consisting of shad, salmon, trout, bass, red-snappers and such other fish as may be in the market, as well as a few of the famed Michigan grayling, which will be sent him for this purpose by that well-known grayling angler, Mr. D. H. Fitzhugh, Jr., of Bay City, Mich. These, with samples of fish-guano, fish-oil, plaster casts of our principal food-fishes, charts of fisheries, models of hatcheries and canneries, models of the National carp-ponds at Washington, and of the different fish-ways will make a most extensive, and nearly exhaustive exposition of our fishery and fish cultural resources, while the persons selected to go over in charge of them will be instructed to make a full report of all exhibits and awards, thus affording those who do not see the Exhibition an opportunity to

know the extent and comparative value of the displays made by all exhibitors. All goods are to be sent not later than the 18th inst., either to the Smithsonian Institution, or to Mr. E. G. Blackford, 80 Fulton Market, New York, marked: "For the Fishery Exhibition at Berlin." The persons to whom the matter has been intrusted are intending to sail in the North German Lloyd steamer *Neckar*, from the Bremen Pier, Hoboken, on the 20th, and it is necessary that they should have a complete catalogue of all exhibits to leave in the hands of the printer on the day of sailing, so that it may follow in the next ship.

There will be no attempt at a display of live fishes on the part of the United States Commission, but working models of fish-ways may be put in running order with a few salmon fry to illustrate their practical working, and also some hatching jars. For the latter we learn that Mr. James Annin, Jr., of Caledonia, N. Y., will send over some trout eggs, which, after the Exhibition is over, will be presented to the Deutsche Fischerei Verein. It is also announced that the New York State Fish Commission will make a display of fish which have been reared in their ponds, and also of implements. This will be the only State exhibit, made as such, although the Commissioners of some other States will make individual exhibits.

Accounts have been published to the effect that all the exhibits were to be transported across in the *Fish Hawk*, but this is not correct; her services are needed here this spring in shad hatching, and the North German Lloyds, with their usual liberality, have offered to transport all articles free of charge.

THE INTERNATIONAL RIFLE MATCH.

THE question of how best to revive long-range shooting at Creedmoor is now a live one before the Board of Directors of the National Rifle Association. Last year at Creedmoor the long-range practice took a season's vacation, and compared with other classes of shooting was a nonentity. This condition of affairs is a disgrace to the association, and it is the duty of its officers to consider the cause of the deficiency and to so order and arrange the programmes of matches that the long-range men may find a foot-hold and be given a fit opportunity for their special style of shooting. It is true, as Col. Bodine said in urging upon the Board at its last meeting, that something should be done for the encouragement of long-range marksmanship, that while off-hand shooting is popular and military shooting very essential, that long-range work remains the perfection of rifle shooting. The drift of military shooting is toward this higher, or longer plane of marksmanship, and in the past it is by and from the observations of these "fancy" shooters who lay about on the ground or twisted themselves up in knots and fired over long stretches of country, that hundreds of points were cleared up and the supremacy of American armies maintained. It is, in fact, the short-range men who are the fancy shooters, if any style is to be dubbed with that epithet. While every class of shooting has its uses, and to top it off is to make the sport and the art warped and misspoken, Creedmoor to-day should boast its strong equid of long-range men, as it can muster its thousands of military marksmen, and its long lines of short and mid-range shooters; but how to bring this about is the problem which the Board have now to solve.

The answer may be found in a consideration of the history of long-range shooting in this country. No must indeed be a shooter of yesterday who cannot recite the whole of America's proud record with the rifle before the butts. Mistakes have been made, and it is due to one of these that we are suffering under the stagnation and lethargy of to-day. Such indeed is the judgment of many who have had the best of opportunities to inform themselves, and whose interest is in the answer by reason of their participation in great matches of the past.

It will be remembered that in 1874 we were favored by a visit from the Irish Team, who formed the match because in their winning of the Elcho Shield they had placed themselves as the leading rifle shooting nation of the world. Their visit and the match which they fought with so much *clat* with the American Team were very informal. No championship emblem had been established, and the chief results of the contest were to make the riflemen of two great countries better acquainted with each other, to make the Americans confident in their own power and ability, before that time entirely untried, and it set what may be styled the rifle "boom" in this country going. Other ranges were then started, the inefficiency of the militia was commented on, and measures taken to make it a serviceable force. That Irish-American match did incalculable good, and American riflemen can never sufficiently thank their brothers from Dublin and Belfast who came over to be defeated for the glory of rifle shooting in America. Then came the return match to settle the very close shade of difference which existed between the merits of the two teams. It was pretty conclusively settled at Dollymount in 1875, and while the Irishmen were again defeated, the feeling of generous rivalry was not broken, but rather strengthened

by the interchange of visits. Thus far it had been a sort of amateur shooting scheme; championship was not spoken of, and each match was only a friendly contest, with a proud feeling and patriotism thrown in to give purpose and incentive to the efforts of the men.

It was felt that something should be done to systematize this international long-range work. The Elcho-Shield contest in England furnished the model, and a match excellent in its several details was drawn up, with the Palma as the bauble which was to be the ostensible object of the struggle of the team-men, but there crept into the conditions of the match an element of discord in defining the eligibility of contestants, which has been a bone of contention ever since, and it is this which in the opinion of riflemen on both sides the Atlantic is to-day acting as a drag on the progress of international shooting. The mistake lay in copying too closely the conditions of the Elcho match, and in place of recognizing the meaning of the word "International," going a step further, and in one marked instance making special concessions in favor of parts of a nation. At the time it would have seemed discourteous to have disbanded teams of Irish riflemen from the contests for the new Centennial trophy which we were launching out with so much enthusiasm. The mistake was made on the side of over-kindness, while there was a good mixture of ignorance, and failure to foresee the almost certain complication which would arise. There was a lamentable blindness to the readiness with which a company of Britishers could raise objections to almost any scheme, and attentive readers of the *FOREST AND STREAM* since 1876 well know the arguments pro and con on the question of the Palma condition.

Looked at calmly and deliberately it must be acknowledged that the admission of Scotland, Ireland, Australia and Canada as nations, while Great Britain was to be regarded only as another nation, is a trifle contradictory. It is an assertion, in spirit, that the part is equal to the whole. Objection was raised by the English marksmen that if the Palma was to be regarded as an international trophy, then a British team only should be recognized, and that Ireland and Scotland should bear their part in the contest only as component parts of the British Team.

This reasoning was cogent, but the Irish riflemen had been our friends, the Canadians were our neighbors, the chance of defeating the crack Scots was a tempting one, and so the conditions were kept in that curious contradictory condition which in 1876 led to an international match, with two nations represented and five teams on the field. The year following the match became really an international one. We had a *bona fide* British team here, who came under protest, claiming, consistently with their position taken from the start and never varied from, that the conditions of the match were wrong and unfair alike to America and her wished-for rivals. A defeat of an Irish team would be only a partial victory, for Great Britain would not be beaten, and no national conquest would be made; and when so elegant a trophy had been prepared, it seemed a piece of criminal blundering to demean it by reducing it far below its importance as an emblem of national victory by making sections of a composite commonwealth possible contestants. We may have Irish-American matches, and we may have Scottish-American contests, while our friends, the Canadian riflemen, might make frequent visits to our ranges for their own improvement; but when it comes to an international match we recognize no States on this side the ocean, and we should recognize no countries on the other.

We discuss this question as though it were purely a match between the countries of Great Britain and the United States. This is only owing to the accident that the other nations of Europe persist in the foolish course of entirely over-looking long-range practice. In time they may see their folly, and then will come the time of their protest, for it is not likely that they will have the easy complacency of our American Association and be willing to shoot in an international match where five teams may represent one nation.

But it will be said by some advocate of the present bungle that Scotland and Ireland have by their coming, and by their recognition on this side the water, established some claim to the trophy—at any rate a right to entry in future matches. This is a claim without much foundation. Were it a challenge trophy, to be taken after so many winnings, then the claim would be a strong one; but the fact that Scotland, for instance, has once shot for the trophy, under a misnomer, does not establish for her any right in the matter. America may be forced to admit that she has made a mistake, but she cannot be compelled by any twisting of logic into perpetuating a wrong. The right of no one will be invaded if the N. R. A. of America should to-morrow send out a notice making the match what it was originally intended to be, an international one, where nation shall shoot against nation, and not State or section.

Here it seems essential for the healthful revival of our long-range work, that another Palma match should take place. Great Britain says, through her National Association, that she is ready to enter heartily into such a series of contests as the originators of the Palma match had in their minds. We here can only gain by the match.

We shall lose such compact bands of patriotic co-workers as the Irish and Scotch teams were, and will get in place an imperial team of various elements. We know that such a team can only win against the American team system by remarkably good shooting, or by a fizzle on the part of the home team. But even were the change to bring us stronger antagonists than ever, it should be advocated, because it is a return to plain simple justice, which for so many reasons has been withheld by our Board of Directors here. We want no more "walk-overs," if such they can be called, where no other entry is made. We do not want the dullness of another blank season, but we want the impetus and the improvement which a match will bring. Where we are so clearly in the wrong as in this case, it would be but a slight display of that common sense which we Americans are so fond of claiming, if we should step down and off from our own toes and permit some progress to be made. Great Britain is able, and says she is willing to contest for the trophy, when the conditions are such that she may shoot without protest. This may be mere brag. A change in the rule will test it; and, at any rate, we cannot be further from another Palma contest than we are now, for Ireland, Scotland and the other countries are far from showing any desire to come over for another knock-down.

The subject is an interesting one, and we invite correspondence and a free expression of opinion upon it, especially from long-range men.

GAME PROTECTION.

SHOULD THE GUN BE TAXED?

BROOKLYN, N. Y., Feb. 27th.

Editor *Forest and Stream*.—

I have read with interest "A True Lover of the Sport's" complaint, which is to be admired, but with all due respect I hope he will excuse my opinion if it differs with his on some points. The game laws are so muddled that difficult indeed is the task to advise of game sense; greater still the risk following their abiding. A two-year prohibitory game law is simply sheer nonsense; to tax the shot gun, I shall presently show, would be a little unfair. If the revenue thus obtained was appropriated to game-keepers they wouldn't get the half of it, because the politicians will surely have the handling of the funds. I was once informed by a trustworthy friend in Suffolk County that dozens of the wealthy aristocracy had been known to shoot quail in the month of August. "Why did you not prosecute them?" I asked. "Hadin't time," was the universal reply. Seeing the need of some such "spy," I at once formed a sporting club, of which it is my pleasure to be Secretary. At the present day this very man who "hadin't time" has said to me: "The first man in the club who shoots a quail before the 1st of November, I'll tell on him, and then leave the club." I hardly think there has been a quail taken out of season in that locality in two years. Now, that friend of whom I speak cannot afford to pay an annuity of even three dollars for the use of his gun, which I am sure is never cracked out of season. I say it would be unfair to deprive him of his pastime on that account, and there are more like him.

HARRY FENWOOD.

FERRISBURGH, VT., Feb. 14th.

Editor *Forest and Stream*.—

I am sorry to see so many advocating the taxation of guns. The only hope of efficient protection lies in making our game laws popular, and to do this, anything like class legislation must be avoided. To especially tax his gun would be to burden many a poor man too heavily for him to bear, and if it did not make a poacher of him it would at least make him utterly indifferent to the protection of game, and of which he could have no share. I know of many who are as strong supporters of game protection as any in the land, and as vigilant guardians of the woods and waters about them, and as true sportsmen, who could not afford to pay for the privilege of keeping a gun. What would such a man do if a tax, amounting to prohibition, was laid upon their cheap but highly-prized guns? Would they continue to watch the haunts of game, and report violations of game laws, when they were debared from all participation in what for some of them is their only recreation? No; to be so unselfish is contrary to human nature. Rich sportsmen are too apt to forget that wealth and a fine gun do not make a true sportsman, any more than fine clothes make a gentleman, and that there are some real sportsmen in the lower ranks who ought to be considered in the framing of laws for the protection of game. Such laws, to be popular, must be for the good of all sportsmen, and not of a favored class.

R. F. R.

COHUES, N. Y., Feb. 16th.

Editor *Forest and Stream*.—

Let me ask what has the tax on guns to do with the protection of game? Has it any tendency to stop market hunting? Would not market hunters pay the tax and reap greater benefits than now? Few sportsmen would care to pay a tax, as your correspondent suggests, and probably not have leisure to hunt a day in the year. Another reason is that it is taking away the rights of American citizens to keep any kind of gun they see fit. I heartily coincide with your correspondent in his desire to protect game in this State. As he remarks, we have laws enough. Every winter there is gotten up a now-fangled lot of game laws, and what do they amount to? There might as well not be any. It is easy enough to make laws; far easier than it is to enforce them. The Legislature makes no provision for their enforcement whatever. They should make an appropriation of a few thousand dollars yearly, and let the supervisors of each county appoint suitable men who would enforce the laws. If any number of persons interested in game protection and themselves together, the same as the Society for the Prevention of Cruelty to Animals, then the desired object will be attained. If a prohibitory law were passed for two years, it would not increase the amount of game

in the lens. The best way to get out of this trouble is to prohibit all shooting during the close season; make it an offense for a person to be found gunning. I am as much interested in game protection as any one, yet I scarcely have time to amuse myself hunting; but think pot-hunters might be led to turn from the error of their ways if a part of the law, as it now stands, were administered to them.

H. M.

NEAR THE ADIRONDACKS, Feb. 23d.

Editor Forest and Stream:—

I decidedly object to a proposition to tax guns and omit rifles, for two thirds of the deer-hunting is done with rifles, and in Northern New York there are ten dollars invested in them to one in shot guns. Perhaps it would be well enough to tax the rifles owned by clubs, which are used at target practice only. But I know several who belong to rifle clubs in the cities and large towns who come up here every fall to hunt deer with a rifle of some kind, which should be taxed as much as any gun. What your correspondent says about a two years' prohibition law is perfectly correct. It would only benefit the pot-hunters. Why under the sun don't they find a way to enforce what laws we now have before making more? As the law is now (allowing August hunting, which I think is wrong), if it could be rightly enforced we would soon have the woods full of deer. Just consider the great numbers which are destroyed every year out of season—two thirds, at least, of all killed during the year. If these had been allowed to breed, with those which we still have (which are many more than they would suppose), there would be deer enough without any two years' prohibition. I say to our legislators at Albany, go to work and contrive some plan to prevent the slaughter out of season. Tax our guns or anything to do it, but make no more laws until those we have can be enforced. There is not a man in Franklin or St. Lawrence county, who frequents the Adirondacks, but knows what I say is true. All know deer are killed out of season and in many instances the parties are known who kill them. But the residents are not going to enforce the laws. That ought to be known by this time. There is no one who cares more for the preservation of game than I do, still there is not a year passes but what I secure the conviction of dozens, yes, hundreds, if I choose, for violating the game laws. I can do no more than hundreds of others, if they wished. But we have many reasons for not doing so. Suffice it to say, we won't and don't do it, and if any of your readers want to find out the reason let them come here and reside, and practice hunting in the Adirondacks, and enter complaints against them.

ADRIAN ONDACK.

A NEW MAINE ASSOCIATION.—*Portland, Me., Feb. 28th.*—Of late there has been evinced in this locality a considerable interest in the protection of game and fish, and it has finally taken shape in the organization of the "Cumberland Game and Fish Protective Association," with its headquarters at Portland. The association has started under favorable auspices, its list containing some of our most prominent business men in the professions and trades. We have already twenty of the leading sportsmen of the city, and more are to come in. Our association should number at least a hundred with the material at hand.

The permanent organization has Robert B. Swift for President, Samuel Hanson, Vice-President, and Herbert M. Sylvester, Secretary and Treasurer. This association does not wish to be regarded as a shooting club, but has for its primary object the enforcement of the game and fish laws, and to preserve and foster the game and fish which in season afford such healthful and appetizing sport.

We have here in Cumberland County fine woodcock, snipe and plover, partridge and sea shooting in their season. Salmon abound plentifully in Sebago Lake and its tributaries, bass and trout in its many ponds and streams.

It is proposed to make the association a county organization, to embrace among its workings the true love of sport, thereby to promote the unity of action, the knowledge of natural history, and to obtain all the benefits of a successful organization of this kind, and ultimately to obtain an act of incorporation which shall bring with it full power in the association to enforce prosecutions in its own behalf; and we hope to take rank with the best of kindred associations, and to be able to furnish a good work.

H. M. SYLVESTER.

The Cumberland Association has started out with excellent principles. We shall take great pleasure in recording its good work in the early future.

MIGRATORY QUAIL IN PENNSYLVANIA.—*West Chester, Pa., March 11th.*—Last June ninety-five quail were liberated by the sportsmen of the borough and near vicinity, principally in the several townships bounding West Chester. For some ten days or two weeks following their liberation (six or eight were freed in a different place) they were frequently seen and reported. Subsequent to this time, however, no reliable information has come to the writer other than from Messrs. George Little, Beaumont Oat and James Ingram, farmers residing in the vicinity of West Chester. The two gentlemen first named on several occasions during the summer, and, I believe, early autumn, saw the quail, but noted no increase in the number which were liberated on their properties. As regards their breeding we have no personal knowledge. Mr. James Ingram (on his place five birds were placed), however, advises us that he had in his possession a young quail, that had been found in a field where the strangers had been frequently seen and heard. The third, although not seen by any ornithologist, or other person familiar with the species, Mr. Ingram states positively was a Messina quail. His reasons are: small size of bird, peculiarity of bill, and, as above referred to, habitual frequenting of its premises.

To the efficient managers of the *Daily Local News* the thanks of the sporting fraternity of Chester County are due for the untiring efforts (by admitting in their columns all inquiries relative to the quail free of charge) which these gentlemen manifested in relation to our importation. We regret to say that, notwithstanding the liberal contribution of valuable space by the journal already named, but little authentic evidence (we do not refer to the observations of Messrs. Little and Oat) was adduced to show that the quail even remained in the

county longer than a fortnight. In regard to their breeding, we think the Ingram "find" is the only one which has any degree of plausibility about it. Several of the gentlemen who were conspicuous in the importation movement, with whom we have conversed upon the subject, are inclined to look upon the importation as a failure.

B. HARRY WARREN.

LEHIGH ASSOCIATION.—*Allentown, Pa., March 8d.*—At the regular meeting of the Lehigh Game and Fish Protective Association the following officers were elected for the year 1890: President, W. H. Kramer; Vice Presidents, J. Newhard, E. Ritter and E. Kramer; Treasurer, Henry Blitting; Corresponding and Recording Secretary, C. H. Biding; Assistant Secretary, Abraham Shuckert; Board of Directors—Harry Cooper, J. Newhard, William Kramer, H. Berryman, C. Lewis Huber, R. Reinhardt and Augustus Eberhard, of Catsanauque. C. H. B.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Powl. "Bay birds" generally, including various species of plover, and piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limaquia* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Bounts, Guides, etc.; Name of person to address.

LIVE QUAIL.—Limited orders for live quail can be filled by Whitley & Morris, 218 Washington street, New York. Price \$6 per dozen.

COSTLY AMMUNITION.—Sportsmen are constantly coming across curious things and having odd experiences. Our correspondent "Buckeye," of Hudson, Ohio, sends us a story of a deer's head sent from Cleveland, Ohio, to Hudson, in which the taxidermist found imbedded in the lower jaw a three-cent silver piece, a ten-cent silver piece and a five-cent nickel. In other parts of the head were some buck-shot and a rifle ball. The coins were battered and bent out of shape and had shattered the bones. Evidently, our correspondent suggests, some one was short of ammunition, or else had the buck fever.

—We are not among those who deary the things of the present to find all good in the past. We believe the world is moving. The rough-and-ready forefather who went out with his flint-lock could draw a bead on a squirrel and put the ball above that particular individual hair of the head, below which custom would not tolerate mutilation, and doubtless your *dilettante* who fears to soil his lavender kids will miss the squirrel entirely, and the tree too, for that matter. But we do not for that reason bewail the decadence of skill in the field. We hold that the young gentleman with kids is all the better for his jaunt, and possibly he may in time enter so truly into the spirit of the thing that his kids will be left at home and his eye will sight more quickly and his arms hold more steadily.

—The Chinese must go. Twenty-eight sportsmen contested for a shot gun at Seattle, W. T., last month, and, after they had finished their scores, a Chinaman, who runs a wash-house at that place, requested the privilege of trying his skill, and was allowed to do so. He bent all the scores and won the prize.

—The third annual reception of the Fountain Gun Club, of Brooklyn, took place Wednesday evening, Feb. 4th. It was a most enjoyable affair, and everybody seemed to be having the very best kind of a time. One of the prettiest features of the evening was a little six-year-old lady, with dark flowing hair and laughing eyes, who used her little feet in a way to charm all beholders.

WILD PIGEONS.—*Jefferson, Ohio, March 6th.*—Pigeons began flying over this place on Thursday morning. Friday morning a great many passed over, but the trappers were unable to light any, the wind blowing so strong that most pigeons would not work. About eight o'clock innumerable flocks passed over from the east.

—A party of gunners at Bay Ridge, L. I., last week reported that they had started some twenty-five woodcock, among them an albino.

MASSA CHUETTES.—*Duxbury, Feb. 23d.*—The past season has been the most open one for years, consequently not many ducks, whistlers, sheldrakes, etc., bugged. What were shot were in the best possible condition. The bay at the present time contains large flocks of fowl but very wild. The game birds here in their seasons are as follows: Partridges, quail, woodcock, snipe, teal, upland plover, snipe, rail, peep, yellow legs, ring-necked, black ducks, coots, whistlers, sheldrakes, quailers, rabbits, foxes, a few mink, muskrats. Thirty-eight miles from Boston, Old Colony Railroad, two hours en route, Hollis Hotel, J. B. Hollis, proprietor.

WORCESTER SPORTSMEN'S CLUB.—*Worcester, March 5th.*—At their annual meeting this week the members of the Worcester Sportsmen's Club elected these officers: President, A. P. Pond; Vice-Presidents, W. S. Perry, E. T. Smith; Treasurer, Gilbert J. Hugg; Secretary, Stephen Clark; Directors, Albas Houghton, John Goodell, M. D. Gilman, C. B. Holden.

SNIFE OUT OF SEASON.—*Boston, March 5th.*—Mr. Osgood, of this city, captured a Wilson's snipe on the 25th of January last, which I have mounted. H. A. S.

FIRST LONG ISLAND SNIFE.—*New York, March 9th.*—Mr. C. A. Willets, of Flushing, L. I., had the pleasure of killing the first snipe of the season at that place on Feb. 24th, 1890. It was the only one seen. R. L.

New York, March 9th.—Yesterday, the 8th inst., I killed on Long Island two English snipe. As this is rather early, should you deem it of enough importance, you might mention it in your next issue. G. W.

PENNSYLVANIA.—*Washington, March 5th.*—The Washington Sportsmen's Association has been organized with a membership of thirty-five, and it is hoped to double the number.

VIRGINIA.—*Petersburg, March 6th.*—Eleven shells, one hour, half a mile from railway depot, seven English snipe. Markets full of ducks and robins. J. L. K.

MISSISSIPPI.—*Union Church, Feb. 27th.*—We have a shooting club here with a membership of ten. Shall send you some of our scores.

ILLINOIS.—*DeKalb, March 5th.*—The prairie about here is now dotted all over with ponds, and ducks are very plentiful, more so, I am told, than they have been for years, but they are very wild and fly very high, and great skill and good guns are needed. Some good tags are made every day and there is sport for all. Chickens are numerous in season, and so are the sportsmen, so that in the immediate vicinity of the city the "season" is made very short; but the wilds and lakes of Wisconsin are close by, and we need not lack for sport. W. R. K.

OHIO.—*Cleveland, March 5th.*—Was out yesterday, 4th, and shot a Wilson snipe in very good condition indeed. Is not this very early? Never killed one before earlier than March 9th two years since, of which I then advised you; have shot here nearly half a century around Cleveland. A friend of mine sprung a woodcock 23d of February; but the season is so very early; evidence of spring—frogs calling, woodcock up, and other Southern birds are here some little time since. JAMES CHUBB.

LONG ISLAND SPORTSMEN'S ASSOCIATION.—The Long Island Sportsmen's Association held its adjourned meeting Monday night, Mr. Chappell, the President, was the chair. Delegates were present from five clubs. The principal business was the adoption of a constitution and by-laws. The general scheme provided makes each active member of every club of the association a member of the association. All the farmers on the Island who are in sympathy with and will cooperate in the objects of the organization, are made honorary members. A roll showing every member of each club will be prepared, which will be of benefit for reference. The objects of the organization are specified to be "To secure the propagation and protection of fish, game and birds by the recommendation and enforcement of judicious laws prohibiting the killing and sale of game and fish during improper seasons, and the wanton destruction by unsportsmanlike means. Also to foster genuine sports spirit and unite all action among the several clubs of Long Island and their members, and encourage skill in the use of the rod and gun."

The following resolution was unanimously adopted and incorporated in the constitution: "That this association denounces the mutilation of birds as unsportsmanlike and barbarous, unworthy of gentlemen, and calculated to bring sport-shooting unjustly into disrepute, and we pledge ourselves to do everything in our power, as an association and as individuals, to prevent such practice and punish its perpetrators." It was also declared that any member guilty of such mutilation should be expelled, and thereafter remain ineligible to membership.

The meeting adjourned to meet at the Fountain Gun Club rooms March 18th, at 8 P.M.

MONROE COUNTY NOTES.—*Rochester, N. Y., March 5th.*—William Billingshurst, inventor of the Billingshurst reel and manufacturer of the Billingshurst target rifle, died in this city on the 4th inst., of paralysis, aged 78 years. He was in the gun-making trade here nearly fifty years, and doubtless thousands of your readers have handled weapons made in his shop. In his prime of life he was an ardent sportsman, and in his later years was excelled by few as a rifle shot.

A few wild geese have been seen thus early in this vicinity, and "birds are looking up" among the gun dealers.

Robins and bluebirds have been here for some days past. An acquaintance of mine who knows a hawk from a heron yesterday saw a flock of wild pigeons in one of the towns of this county; they are the first I have heard of in the State this year.

The Monroe County Sportsmen's Club held its annual meeting last night and re-elected the following officers: President, W. J. Babcock; Vice-President, J. H. Brown; Secretary and Treasurer, L. A. Pratt. The club has ordered two hundred migratory quail through Horace P. Tobey, of Boston, and is on a good financial basis. There are ninety-nine paying members on the list and applications for admittance pending.

At the charter election Tuesday last George M. Schwartz, an efficient game constable, who has held the office the two previous terms, was re-elected by a flattering majority and on a spite of determined movement to defeat him, stood on foot by law-breakers whom he had prosecuted for illegal fishing.

EXPLOSIVE TARGET.

CORTLAND GUN CLUB.—*Cortland, N. Y., March 7th.*—At the annual meeting of the Cortland Gun Club held at Mr. B. E. Miller's office last evening, the following officers were elected for the ensuing year: President, A. Mahan; Vice-President, C. P. Walrad; Secretary, B. E. Miller; Treasurer, A. Schermerhorn.

The extremely mild weather of the past winter has enabled the members of the club to practice glass-ball shooting frequently, and some excellent scores have been made. There is much interest manifested, and the membership is increasing. A pleasant and profitable season is anticipated.

MONTANA DEER HUNTING.—*San Francisco, Feb. 28th.*—I enclose a paragraph or two from my old chum, Dick Eddy, which may interest you. Under date of Jan. 9th, Missoula, Montana, he writes: "I was out hunting day before yesterday and killed ten deer, and sent out yesterday to bring them in and killed five more." Under date of July 15th from same place, he says: "When I wrote you last I had only started in to hunt. The Quar-

total of thirty-four clean scores in all—twenty-two with the Ballard and twelve with the Maynard. The management of these galleries bar no rifle, even allowing the contestants to shoot their own, which privilege Messrs. Richardson and Jewell exercise.

THE LYMAN SIGHT.—Mr. William Lyman, the maker of the new rifle rear sight, has received the following letter from a member of the Utah Rifle Association. It was entirely unsolicited, and was accompanied by orders for other sights to be used by other marksmen of Salt Lake City:—

SALT LAKE CITY, Utah, Jan. 19th.
 William Lyman, Esq.:—
 I read the sight you sent me by registered mail reached here five days ago. I could not make it fit the same. I believe as I fitted to a Maynard. 22. Yourself and Mr. Sharpe, the owner of the gun, went out to try the sight at living objects. He fired a few shots, and at once saw that the sight was superior to any other sight, and so expressed himself. I tried it, and on the first effort broke the ball and made a string of fifteen or sixteen shots, hand-in-back the gun without a miss. We tried then on objects at various distances for the purpose of ascertaining its adaptability to quick aiming, and the result surprised us. For firing at the word of command it excels anything I ever saw. Of course, we would imagine what it would be in the field and forest.

One of our sportsmen suggested that while its superiority was manifest in those branches of shooting, it might not be adapted to accurate shots, but that we might try myself and him I shot in the presence of two witnesses, ten shots at the target I send you herewith, the result of which you can, of course, appreciate. The distance was twenty feet, and you will see that there is not room to place two bullets side by side in the longest diameter of the target, all the shots cutting into one hole. The distance was twenty feet, and you will see that there is not room to place two bullets side by side in the longest diameter of the target, all the shots cutting into one hole.

In conclusion, I have to say that I consider your sight the perfection of an idea, which, simple as it is, comprehends the secret of accurate mastery over a rifle. To old eyes it must be a perfect God-send.

A HUNTER'S EXPERIENCE WITH BULLETS.
 BOULDER BASIN, MONTANA.

Editor Forest and Stream:—
 The article of Mr. Cleveland in your issue of Aug. 28th, 1879, recalls a discussion that took place in your columns nearly two years since, and I ask space to submit additional facts in support of the views then advocated.

It will be recalled that in answer to some strictures of British rifle experts—to the effect that for all the practical purposes of hunting, etc., the American long-range breech-loader was as useless an arm as the American muzzle-loader—I commented the American rifle as an admirable arm for hunting large game, with the proper modification of sights and ammunition. This opinion was based upon nearly two years' experience with one of the American long-range arms—hunting in Montana, using a 450-grain solid ball. These views were commented upon unfavorably by several on this side of the water, notably by H. W. C. (Mr. Cleveland), who seemed to ridicule the idea of taking such a weapon in the field. The only tangible reason given in support of his view was that the very sharp twist of the grooving, necessary in the long-range weapon, necessarily rendered the gun too big a trajectory for hunting small game. This proposition was successfully controverted by me in reply, I think, by quoting the practice of some of the best rifle-makers of Great Britain, who in the Express rifle—designed especially for flatness of trajectory—used, in some cases, as sharp twist to the grooving as is used in our long range. Some experiments of my own were also introduced, which, at least to my satisfaction, proved the error of his views. The opinion was then advanced that in a well-constructed rifle, flatness of trajectory, *ceteris paribus*, is dependent practically upon the relative proportion of velocity of flight and bullet weight.

So much by way of recapitulation and as an introduction to what follows. This same long-range rifle has been used by me since that discussion, and its powers fully tested upon the large game (antelope, deer, buffalo, elk, mountain sheep and grizzly bears) of the latest game of this continent. The following score of game for the present season to this date, in addition, by the large proportion of animals killed to those hit, a destructiveness scarcely second to any rifle, and the adaptability of the rifle to the purpose of hunting small game. No game is claimed for myself on the score of extra skill either as a rifleman or hunter, for I am only an average one; nor is any especial merit claimed for this rifle over other arms of its class, for it is only an average one. What merit I do claim is the successful adapting of the hollow-pointed or Express bullet to an American rifle, contrary to the opinion of so many that the light Express bullet could not be used in any American rifle with Express charges on account of its system of rifling. With the exception of a few elk and deer, and a few males of each kind for specimens, the aim was to kill no animal—bear, of course, except—except for food. When it is recollected what small amount of each carcass can be kept in warm weather and packed on animals over mountain trails, it can be realized how many animals can be utilized, even by a small party, in several months' exploration of the Yellowstone National Park and the mountains to the north and east. With a little experience double the amount of deer and elk could have been easily killed than is given below. This can be the more easily realized when it is stated that six of the elk were killed in ten minutes' firing, and were quickly utilized by a ranchman for his winter's supply of meat; also three elk at another time and two on two other occasions in a shorter time.

Two bullets were used. In animals no larger than the deer, shells were loaded with 105 grains of musket (83 grains by weight) of Curtis & Harvey No. 6, and a 275-grain hollow-pointed nickel ball, 3-16 inch calibre. For animals larger than the deer (elk, bears, big game, etc.), same quantity of powder and a 340-grain alloyed ball, 10-16 inch calibre.

The classification below is made from notes taken of the locality and character of each wound at the time.

The game was killed by myself, and does not include what was killed by the packer or others of the party, nor by any hunter in the vicinity. The score is claimed as a fair test of the rifle's capacity. In making out the percentage of "kills" (without a second shot) to the "hits," no shot is counted that did not pierce the spinal column or within the cavity of the lungs, or at the point of shoulder and hips, for merely "hits" from any rifle in the limbs will secure game without a second shot.

Total deer and antelope killed the present season to Nov. 10th, 1879 24
 Hit in limbs, and required second shot 2
 Leaving total hit fairly in body 26
 Of these requiring second shot 1

Two killed dead fell within a distance of twenty yards, and were shot at distances varying from fifty to three hundred yards.

Total elk and mountain sheep 31
 Hit in limbs first shot, and requiring second second shot 3
 Leaving total hit fairly in body 34
 Shot at from forty to three hundred yards:—
 Of these requiring a second shot 6
 (Or proportion of 1 to 81-5.)

The 24 animals fell with one hundred and fifty yards, and where shot.

This does not include 3 bull elk and 1 big horn ram known to be hit, and some, with limbs broken, that escaped into timber and were found.

Total bear killed (grizzly, 7; brown bear, 1) 8
 Requiring the second shot 1
 (Or 1 in 8.)

One killed at one hundred and fifty yards, balance from twenty to seventy-five yards. The grizzly—shot the second—would have died within a short distance, and had he not, after the usual number of antics, righted up and came immediately down the hill toward me, and it was deemed advisable, by way of experiment, to give him a second shot when within twenty-five yards. The bears were approached on foot and unattended, except the one shot at one hundred and fifty yards, who was killed by merely dismounting. This itself argues confidence in one's rifle. These eight bears were all so hard hit that only one gave the usual "baw" given when not fatally shot. Of course, with such game the necessity was always recognized of putting in the first shot at close quarters, and doing it well.

Big-horns are nearly as hard to kill dead as elk. With any arm it is very difficult to knock down in his track a bull elk, unless hit in brain or spinal column. Wall hit behind the shoulders, they will usually stand from three to ten minutes before falling. Three of the big-horns and six of the elk were killed with the light bullet, and without second shot. They were all, however, well hit. The condition of an animal (amount of flesh on its ribs) materially affects the Express bullet. The more flesh, the lower the velocity of the splinters of the ball on entering the cavity—which is really the measure of its destructiveness. An average elk will measure 5ft. 2in. (15 hands) high; 7ft. from rump to tip of nose, as he stands; 6ft. in girth, and 30in. depth of chest behind the shoulders, and will weigh 720lb. when in fair condition. This rifle is so sighted that with a 275-gr. ball and with fine sight, its point blank is 135 yards; coarse sight, 200 yards; trajectory rising seven inches. Turning up a leaf, and using a 340-gr. ball, fine sight, 125 yards; coarse, 200 yards. The second leaf also gives a point blank for light ball of 250 and 300 yards.

As to accuracy, I have grouped ten consecutive shots, with the 275-gr. ball, within an eight inch ring at 200 yards; also ten consecutive shots within a four inch ring at 100 yards. From ten to twenty shots (dependent on account of atmosphere) can be fired with the light ball without materially fouling the barrel. These details may appear tedious, but they have a material bearing on the adaptability of any weapon for hunting purposes. The object of this paper is to make apparent this showing for one of the American long-range rifles, and that, although only .41 in calibre, it can be made sufficiently destructive for the largest game of this continent.

I don't mean by the above that were I going to order an arm, especially for hunting, the long-range model would be selected. I would prefer, on account of its safety on horseback, a too, probably four inch shorter barrel and a shell to hold 100, perhaps 120 grains powder. But what would be required would be a rifle of the extreme accuracy of the long-range model (call it by what name you choose and leave the length, etc., to the builder). With me one half the pleasure derived from the use of the rifle is in target practice, and with me one rifle is as much as it is desirable to look after. It is for this reason I want a rifle that in a few minutes can be transformed from a target to a hunting rifle, and vice versa. Whoever has traveled around by rail, as I have with two guns, with two outfits of shells and ammunition, etc., knows its annoyance and trouble. This would be doubly expensive and annoying if traveling through mountains by stage or by pack animals.

Any one who attempts the latter mode of getting about will soon appreciate the luxury of having only one rifle and outfit to look after, and will never be bothered with two. You also want a rifle as light as possible and of power sufficient to master any animal you are liable to meet, from a blue grouse to a grizzly bear.

I was glad to see by a late circular that one of the Express rifle makers coincides in some of my views. Alexander Henry, Edinburgh, whose reputation as a match and Express rifle maker, is second to none in Great Britain, advertises "a match and Express rifle combined," which means, I presume, that he uses express bullets and express sights in his regular breech-loading match rifles. Though the length of this article has exceeded first intentions, a few words in answer to Mr. Cleveland's last. With Mr. Van Dyke I have understood him that his model rifle (40 cal. 40 grain), too, was unrestricted as to distance, and was more impressed in that regard from his bringing forward as examples of its destructiveness the tiger of India and the buffalo bull of the Western plains. His articles are not before me, but of course I stand corrected. I was equally surprised, however, that a rifleman of his experience should find evidence of the flatness of trajectory of a rifle, from the fact of a good rifleman centering the tiger's eye at forty yards. Had he not reiterated this opinion in his last card, I might have thought myself mistaken in his meaning, as is in the other instance.

The fact of a rifle with a driving center at any distance, proves nothing, except that it is sighted for that particular distance. American sporting rifles are sighted for different distances—fifty, seventy-five and one hundred yards. If the rifleman in question "drew a fine bead" on the tiger's eye my inference would be the rifle was sighted for fifty yards. Sighted for seventy-five yards the center could be driven by holding a little under, by one who knows his weapon well. So that until more particulars are given of this shot it proves nothing except the nerve and skill of the rifleman, and probably his "good fortune," too, as Mr. V. suggests.

The term "flat trajectory" is very indefinite, so also "fine sight" and "coarse sight," unless we know by careful experiment how much the trajectory rises when sighted for a certain distance. By my own idea of the term I do not see how a flat trajectory can be gotten from Mr. C.'s model rifle with a forty-grain charge and the conical ball of say 200 grains, a proportion of powder of one-fifth. Noting less than a proportion of one to two and a half and one in three will give a flat trajectory up to 200 yards and with proper weight to the ball. No reflection is meant in the above on the Maynard rifle, which stands scarcely second to any of our breech-loaders as a close shooting and excellent arm. Besides, I have great respect for it as one of two of the "pioneer" American breech-loaders.

Boulder Basin, Montana.

MOUNTAIN CHUCKER CLUB.—At a meeting of this organization held at St. Louis on Feb. 11th, the following officers were elected for the coming season:—President, Mr. George F. Neale; Vice-President, Mr. George M. Foster; Treasurer, Mr. F. Hackey; Secretary, Mr. William H. Chambers, 208 South Main street; Committee, Messrs. P. Adair, E. H. Lyett, J. B. Gage, T. Penn and William Brodie; Captain, Mr. Julian Rutwell.

Yachting and Canoeing.

THE HERRESHOFF SYSTEM OF STEAM PROPULSION.

WE take pleasure in laying before our readers a complete exposition of the Herreshoff system of steam generation and propulsion, as applied to pleasure and sporting yachts.

The Herreshoff Manufacturing Co., of Bristol, R. I., are now at work on their sixty-fifth steam vessel—a list which includes steam yachts, launches, gigs, torpedo boats and gunboats, varying in size from 17ft. to 135ft. in length. These vessels have all attained the highest speed in their several classes, and are always noted for the fine lines of their hulls and for the general excellence of their workmanship, both in hulls and machinery.

Let us first examine in detail their boiler, which presents a combination of new and remarkable qualities. It is the invention of the Herreshoff Brothers, and is the subject of two patents in this and foreign countries.

By reference to the annexed cut the manner of construction and its operation can be easily understood. The boiler consists of a coil or coils of wrought iron pipe placed vertically over a circular furnace, the whole being surrounded by a double or triple jacket or shell terminating in a smoke-stack on top. The products of combustion cannot escape at the top of the coil, which is closed, but are obliged to find their exit through the spaces at the side between the several turns of pipe which form the coils. Thus the influence of the fire is brought to bear in a very efficacious manner upon the heating surface, giving thereby a very high economy of fuel.

The feed water is pumped into the upper coil, A, which serves as a feed-water heater, through which it flows to the lower part of the main coil, B. In the coil B the water, as it approaches the bottom, becomes more and more evaporated. When it finally reaches the end of the outer coil, C, only a small portion of the water, say ten per cent, which has been forced in at the top, remains liquid. The contents of the coils are discharged through the pipe E into the separator, D, in which the steam and water become separated. The steam flows off through the pipe F to the superheating coil, G, from which it is taken directly to the engine. The water, which has been separated from the steam in the separator, falls to the bottom of it. The height at which it stands may be known by the glass gauge H. The excess of feed-water blown off from the separator is returned to the coil A by a circulating pump. A simpler method, however, but accompanied by a small loss of heat, is to discharge the excess of feed-water into the condenser, whence it is taken by the air pump and delivered into the hot well, from which it is taken by the feed pump and again carried to the coil A.

The boiler is absolutely safe from explosion—a most comforting assurance to all in its neighborhood. It is less than half the weight of ordinary boilers, and can be put into operation in a remarkably short space of time; only five or six minutes are required to raise steam. Its economy of fuel is claimed to be equal to the best form of boilers in use—a claim which seems reasonable in view of the large amount of heating surface exposed. The engine adopted by this company is of the compound condensing type, and possess many advantages over the old plain system—notably, economy of fuel and freedom from the noise and other nuisances connected with exhausting steam into the open air. There is also by this method an increased durability of working parts, owing to working the steam at a high rate of expansion. The accompanying cut is of a compound condensing engine for yachting use. It is from the photograph of the engine exhibited in New York in 1879, at the Fair of the American Institute. To it and to the boiler medals of excellence and a diploma were awarded.

We summarize the advantage offered by this system as follows: First, the extreme lightness of the machinery and boiler, which gives to the vessel a maximum degree of speed, buoyancy and seaworthiness, with a minimum of resistance to the wind and draught of water. Second, by the use of the Herreshoff boiler perfect safety is insured, with compactness of form and durability of parts, as natural draft only is used in the consumption of fuel. The quickness by which steam is raised is a most important feature, which is highly appreciated by yachtsmen and sportsmen who "brook no delay when on pleasure bent." Third, by the use of the surface condensing engine the amount of fresh water required is reduced to a minimum, 30 gallons of which will suffice to carry a 15 h p. yacht 300 miles. As has been noticed, the absence

As has been noticed, the absence

SALEM BAY YACHT CLUB.—Since its incorporation the Salem Y. C. has been called the Salem Bay Y. C. Its fleet is rapidly growing. The well-known *Vixen*, *Brenda*, *Breeze* and other large Boston yachts have joined. Its two club-houses and sheltered harbor offer strong inducements, and as the management of affairs is in the hands of wide-awake gentlemen, who see in yachting something else than delighting hours, the S. B. Y. C. is destined to become one of the leading organizations on the coast.

BOSTON YACHT CLUB.—An exchange says: "The Boston Yacht Club took a new lease of life last year, and with young men for a regatta committee, could boast of the finest regattas, both in number of craft and amount of prizes, of any club in New England. As the same gentlemen are retained on the committee for the coming season, there can be no doubt but the reputation earned last season will be retained."

DORCHESTER YACHT CLUB.—Messrs. King and Clark, of the Dorchester Yacht Club, yachtsmen well known in Boston and vicinity, have sold the fast center-board sloop *Woff* to Mr. C. E. Adams, Jr., of the Quincy Y. C., and expect to have a sloop of about 40ft. the coming season. The Dorchester Y. C. are preparing the dates for regattas for the season, which promises to be a very brilliant one.

QUINCY YACHT CLUB.—Opening regatta set down for May 15th. Many new boats will appear under its colors. Peter Turner is building an 18ft. cat, Leloi another, and Mayberry is finishing one of 20ft.

HAVENHILL YACHT CLUB.—Mr. E. P. Brown has had a new craft built, 30ft. long, with a roomy cabin. She is to be used mainly for cruising.

CRAFTS FOR MEXICO.—The New York Safety Steam-Power Company is filling a contract for three steam revenue cutters for the Mexican Government. The hulls are being built in Sam Pina's yard, Greenport, from models furnished by the well known modeler, Chas. Hillman, of City Island. They are 65ft. long, 12ft. beam, 5ft. 6in. deep. The engines are of the Babcock & Wilcox compound type; cylinders, 81 and 12in. by 12in. stroke; pressure, 120lbs.; schooner rigged; eight tons coal in bunkers. Boiler is of the cylindrical return tubular kind, 5ft. diameter and 32ft. long, having 40 square feet heating surface, and is built of 61s steel, three-eighths of an inch thick. They will have trunk cabins, carry two lifeboats and a crew of ten men, and are intended to steam eight hundred miles on their bunker capacity.

THE VALMADIAH.—Messrs. Lawley & Son, South Boston, expect to launch the new keel sloop they have in hand early in April.

She is 40ft. on deck, 30ft. w. l. and 14ft. beam; frames of white oak, 4x12in., spaced 11in.; planking nearly all in one length of yellow pine. Her cabin trunk is 17ft. 6in. long, 9ft. and 15in. high; height between decks, 6ft. 2in.; two staterooms, w. c., housing topmast; intended for cruising and racing. The same builders are at work on two hollow topmasts for the famous old *Inverca*, which are to go on and leave her departing for the West Indies; also a hollow loon and topmast for the *Drum*.

SKEINER.—Says the Boston Herald: "Several new keel-boats, under 30ft., are being built in and around Boston, among them one by Thleston of Dorchester, only 18ft. long. Keel-boats of this size are again becoming popular." Evidently, Boston no longer suffers from the center-board craze, but has recovered from the mania, and New York shows unmistakable signs of following. With keels, low ballast, less beam and more depth, even the "little ones" will boidly take to distant cruising. Model is what we want for safety, not tonnage.

A CASE IN POINT.—We learn from the East that, "in regard to joining the National Yachting Association, we hardly think we could get a committee together to represent us, as the N. Y. A. is apparently going to allow shifting ballast in small boats. This we can never consent to in any form."

As yet, no sailing rules have been drawn up by the N. Y. A., and we should not like to assume to speak for them on this head. Our own views have always been sufficiently pronounced in the matter, but the N. Y. A. will sail its own ship as it chooses and take the consequences.

NEW YACHT.—Mr. A. Carey Smith is engaged upon the design of a craft for a gentleman in Boston, upon the principles so successfully applied in the famous *Madcap*, which won her maiden race only three days after bending sails, and subsequently three races hand-running, in one week, against yachts from five to eight feet longer.

THE ACTIVE.—We learn that alterations were made to this yacht, departing from the original design furnished. This proves the correctness of some of our remarks in this issue, and should be a caution to critics not to let slip the dogs of war until they are in possession of the hot tom facts.

THE DOLPHIN.—This sloop, formerly the property of Governor Straw, of New Hampshire, and built by Hirschhoff, of Bristol, was purchased by Mr. Arthur L. Dean, and in accord with the prevailing tendency, has been altered into a keel by Smith, of City Point, South Boston.

NEW ROUTE TO NEWPORT AND BLOCK ISLAND.—It is proposed

by the Long Island R. R. to make connection at Greenport, L. I., with steamers to Newport and Block Island. This will place three yachting ports in direct communication with each other, and will prove of great service to yachtsmen.

THE VIKING.—This grand keel sloop having a thorough overhauling inside, and may have to fight hard for it with new *Valhalla*. Lawley & Son, who seem to do most of the work in Boston, have the job in hand.

MOUND ANCHOR.—Pierce Bros., of South Boston, will shortly ship a cabin-cut to some American residents in Turkey. She is 27ft. long, 23ft. w. l. and 11ft. beam.

SIGNS OF THE TIMES.—Sloop *Model*, of Dorchester, W. H. L. Smith owner, has come to it likewise, she is to have an iron sho of 1,800 pounds added "where it will do the most good." Sensible *Model*.

MEASUREMENT.—A correspondent objects to the proposal to adopt some standard freeboard for measurement, and adds: "Let a man build what he likes and take his chances." If it can be shown that such a course will not clash with our "Axiom IV.," his suggestion has our approval. But if it would lead to the construction of dangerous and uncomfortable low freeboard machines, the adoption of a standard freeboard or depth is much to be preferred. In countenancing "standard depth" in these columns we were giving voice to the fears of many that actual depth would prove incompatible with seaworthiness, a quality which in American yachts needs nursing more than any other. If these fears can be shown to be groundless, and if freeboard will not suffer by measuring actual depth, then our correspondent's suggestion to substitute the latter for an assumed figure will meet with indorsement, for it will simplify measurement to a multiplication of three main dimensions. We may add, that "length" should be the mean length, to prevent an otherwise impetuous stunting of overhang.

Probably, before resorting to the more complex rule involving "standard freeboard," it may be well to apply simply the "three dimensions rule" and observe its effect upon design. If the cloven foot of low freeboard shows itself, then it would be time to seek a cure. We are led to these remarks, because we know the difficulty of making anything but the very simplest formula popular among the masses, and rather than risk a continuance of the present crying evil of "simple length," any compromise on the basis of three dimensions will be a relief from the charge of shiftless superficiality which must hang over the community just as long as length rules the day.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	.50	1.00	1.50	2.00
Amount to remit us, 3 " .75	6 " \$1.50	1 " \$3.00	2 " \$5.50	3 " \$8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1889, and July 1, 1890,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00

Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any person sending us before July 1, 1890, two new subscribers for one year, or four new subscribers for six months, and Eight Dollars cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates. A copy of FOREST AND STREAM for one year. A three-piece double-ferule, lancewood tip, full mounted, polished Bass, Trout or Bait Rod.	Coues' Field Ornithology. One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks. One Russia-leather Fly-book, and one dozen assorted Flies.	One five-foot lancewood Bow, Horn Tips, and one dozen 25-inch Arrows. One pair Club Skates.
Two copies of Forest and Stream for one Year. A four-piece, double ferule, guides and reel-band, hollow, butt, extra tip, full mounted, Bait or Brass Rod. One 3-piece do Fly Rod.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Coues' Key to North American Birds.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickel-plated Club Skates. One Parlor Air-Gun.

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

FIELD TRIAL DERBY of 1890

THE first American Field Trial Derby will be run under the National American Kennel Club Rules, about the third week in November, 1890, time and place to be hereafter announced, for setter and pointer puppies whelped on or after APRIL 1st, 1879.

First Prize, \$150; Second, \$100; Third, \$50. Entries, Five Dollars each, to be paid at time of entry; Ten Dollars additional each for starters, to be paid before starting. Entries, giving full particulars as to color, marking, sex, pedigree and name, must be made on or before APRIL 1st, 1890, to the Secretary of the National American Kennel Club. Any number of dogs, the property of one owner, can run for this stake. The names and pedigree of all the puppies entered will be sent to all the sportsmen's papers for publication. The forfeit money to be added to the stake and divided between the winning dogs in the same ratio or proportion as the stake is divided.

ENTRIES CLOSE APRIL 1st, 1890.

For blank forms of entry apply to

CHARLES DE RONGE,

Secretary N. A. K. C.

(P. O. Box 994.) No. 51 Broad St., N. Y. City.

Feb. 15-t.

RARE BARGAIN—The celebrated pointer dog King Phillip, winner of three prizes; thoroughly broken; large, handsome deep liver, three years old, at one-half his value if taken immediately. Address W. T. IRWIN, Topka, Kan. Mar 11-t.

The Kennel.

Neversink Lodge Kennels.

The following celebrated dogs are in the stud.

DOGS:

St. Bernard dog "Marco", rough coated, two years old; a magnificent animal—Rev. J. Cunningham Macdonald, stock—second prizes Hanover Show and Rochester.
Newfoundland dog "Keeper", four years old; first prize Westminster Kennel Show, 1879.
Pointer dog, "Croxthead", liver and white; one and a half year old; out of Lord Setton's renowned stock—out of the handsomest pointer in the United States. Second prize in the H. Anov. International Show.
Blue Belton setter, "Deedman Dash", eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.

Irish setter, "Rover II", pure red; son of Macdonald's champion "Lover", never exhibited.
English setter, "Ranger II", pure bred Laverack, son of Macdonald's celebrated "Ranger". He got won first at Hanover and Paris shows, and second at Puppy Shows in Eastern Field Trials.
Stud fee, \$25.00.

For Sale.
The get of the following thoroughbred Bitches.

St. Bernard "Brunfels", rough coated, out of Prince Sol's celebrated stock; a magnificent bitch, in which to "Mare" 1st prizes in Hanover and Rochester show.
Pointer "Queen", liver and white, let Westminster Kennel Show 1879, 1st Boston Show 1879, 2nd New York Show 1879.
English setter, "Lover", liver and white, out of "Queen" and "Sensation".
Blue Belton setter, "Silly", out of Col. Hilliard's "Palmerston", in which to "Rover II".

English setter "Donna", white and cream. Pups can be secured by an early application. Besides I offer for sale pointers and setters of choice quality, but of good thoroughbred stock; full pedigrees. Also several puppies of champion "Queen", by champion "Sensation".
Having engaged the services of Macdonald's renowned field trial breaker I am prepared to book orders for thoroughly broken dogs, deliverable, autumn, 1880. Particulars will be furnished on application to—

The "STANDARD TARGET."—For Rifle Practice.
Size 6 inches. Bulls-eye 1 1/2 inches. Range, 100
feet, off-hand. The zones rise by area instead
of diameter.

Marksmen will appreciate the new departure
which this target has inaugurated. The accurate
rifleman now gets the true value of his shots,
while on old-style targets the record was so falsified
by the element of chance as to give but a
vague idea of the shooter's skill. For instance,
on a 200 yard Creedmoor "center," scoring 4
has ten times the area of a "bull," scoring 5. Every
rifleman knows that to degree of skill or care will
give immunity from occasional misses, and under
the old system it was almost the rule for good
marksmen to be beaten by bad ones. One man
would pile up eight ring bulls out of ten, but
lose the other two, while his competitor, "shoot-
ing for fairs," would scatter his strays all over
the board, blunder one shot into the edge
of the bull, and win! Now in deer stalking, and
shooting at 50 yards, the winner would have
wounded and lost one deer, while the loser would
have struck down eight, all shot through the
heart. Of course there are people who still con-
tend that under the old method "all had an equal
chance;" which is very true. But it is also true
that their equality of chance would have
been in no wise impaired if they should have sat
down and thrown dice to determine who was the
better shot. In contests of skill every element
of chance should be eliminated.

Arrangements have been made for supplying
these targets at a merely nominal price, and it is
now an easy matter to gauge relative skill by
uniform practice, and to communicate definite
results without obscuring them by explanatory
details. The targets are mailed, post-paid to any
address in the United States at fifty cents per
hundred, and quite a liberal discount is made to
galleries and dealers. Send orders to CROSSBOW,
MAY & SHEPARD, Glen Allen, Virginia.

EXPLOSIVE TARGET BALLS.

CLAY BIRDS! CLAY BIRDS!! CLAY BIRDS!!!

Beck's Patent Clay Birds and Trap.

Pronounced by all Who Have Seen it as The Best
Substitute ever Invented for a Living Bird.

Flies like a live bird; is as hard to hit as a live bird;
affords as good practice as live birds, and at a nominal cost.
The bird is made of clay, burned hard, and breaks when hit
with shot.

Our Trap will throw the Clay Bird further than any trap will
throw a ball; keeps it in the air longer, and gives the shooter
plenty of time to cover. In using these birds you secure

Better Practice than Glass Balls Give.

And obtain the many objectionable features of balls.
Give them a trial, for you are sure to be pleased, and you can't
invest a small sum of money to better advantage.

Price of Birds, \$2.00 per 100. Traps, \$5.00 each.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed,
if equaled, in the abundance and great variety of
fish contained.
BROOK TROUT abound in the streams, and
the famous AMERICAN GRAYLING is found
only in these waters.
The 1900 season begins May 1 and ends Sept. 1.
The GRAYLING season opens June 1 and ends
Nov. 1.
BLACK BASS, PIKE, PICKEREL, and MUSCA-
LONGE, also abound in large numbers in the many
lakes and lakelets of this territory.
Two sportsmen can readily send trophies of his
skill to his friends or "club" at home, as ice for
packing fish can be had in quantities.
TAKE YOUR FAMILY WITH YOU. The scenery
of the North Woods and Lakes is very beauti-
ful; the air is pure, dry and bracing. The climate
is peculiarly beneficial to those suffering
with
Hay Fever and Asthma Affections.
The hotel accommodations are good, far sur-
passing the average in countries now enough to
afford the finest of fishing.
During the season Round Trip Excursion Tick-
ets will be sold at low rates, and attractive train
facilities offered to Tourists and Sportsmen.
Dress, Guide and Fishing Tackle Carried Free of
owner's risk.
It is our aim to make sportsmen feel "at home"
on this route. For Tourist's Guide (an attractive
illustrated book of 80 pages), containing full in-
formation and accurate maps of the Fishing
Grounds and Time Cards, address A. B. LEED,
Gen'l. Pass. Agent, Grand Rapids, Mich.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,
SUPERIOR FACILITIES

afforded by their lines for reaching most of the
TROUTING PARKS and RACE COURSES in the
Middle States. These lines being CONTINUOUS
FROM ALL IMPORTANT PORTS, avoid the diffi-
culties and dangers of reshipment, while the ex-
cellent cars which run over the smooth steel
tracks enable STOCK TO BE TRANSPORTED
without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, HENRY, A. BEL-
FORD, CHESSON, RALSTON, MINNEQUA, and
other well-known centers for
Trout Fishing, Wing Shooting, and Still
Hunting.
Also, to
TUCKERTON, BEACH HAVEN, GALE MAY,
EQUAN, and points on the NEW JERSEY COAST
renowned for SALP WATER SPORT AFTER
FIN AND FEATHER.

HO! FOR TROUT FISHING.

THE FAR-FAMED waters of the Mag-
anetawan are now within easy access of
Toronto and the outside world, and are still teem-
ing with speckled trout. We have created a large
and comfortable hotel in Maganetawan Village
and are prepared to offer every facility to our
sporting friends by way of canoes and guides to
the trout lakes and streams tributary to the Mag-
anetawan, and can offer the best of trout fishing
within a mile of our hotel; will have canoe and
facilities for packing fish, so that they can be taken
fresh to any part of the Northern States. The
road from Kousseau (the head of steam travel) has
been Macdonaldized and the journey shortened by
half a day, so that parties leaving Toronto can
get there in one and a half days. Come up and
see us.
IRWIN & CLARK, Proprietors,
Maganetawan Post-Office, Ontario, Canada.

Miscellaneous.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING and BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FFG and FFGG. The FG for long range rifle shooting; the FFG and FFGG for general use, burning strong and moist.

**SPORTING, MINING, SHIPPING, and BLAST-
ING POWDERS** of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Minnie Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

S. L. KNEELAND, 70 Wall Street, N. Y.
N. Y.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square cans of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 2 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

Hazard's "Kentucky Rifle."
FFG, FFGG, and "Sea Shooting." FG in kegs of 3, 2 1/2, and 6 lb. and cans of 5 lbs. FFG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

DITTMAR POWDER.

Champion Shot Gun and Rifle
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our campaign to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Southern Wood Notes.

W HETHER in the tangled thickets of spice wood in Indiana or Kentucky, the home of the ruffed grouse, or in the somber silence of a Southern pine forest, there is a beauty in the forest, trackless and illimitable, that can only be surpassed by the solemn expanse of ocean itself; and, indeed, there is a great similarity between the dwellers in the woods and the reckless sailors who brave death in every form upon the mighty deep.

At this season of the year one can see vast numbers of doves feeding on the grass seeds in the cotton patches, or on the few cow peas that have been left by the hogs in the corn-fields. They afford very fine shooting, for they go like the wind, and none but a hard-hitting, close-shooting gun will bring them to grass.

I have been much amused at the discussions that have been going on in FOREST AND STREAM ament the holding on a bird, when a cross shot or ahead. As all the shots at doves are cross shots, these gentlemen, were they to shoot here, would have a "beggary account of empty" shells and no birds. At forty yards, or further, I aim from three to five feet ahead of my bird, and even then I sometimes shoot behind. *En passant*, I remark that the only successful way to kill either quail, ducks, or doves is the "swing." Follow the course of your bird, throw the gun ahead, and pull trigger simultaneously. All this talk about "snap" shooting and deliberate shooting is all "bosh." Deliberate promptitude is the rule, and he who departs from it can never shoot well, nor even make an average shot. Some writers say that you must have the sight in front of your bird. I have never found any use for the sight on my gun. I never see it when I shoot. Nor do I believe any but a "poke shot" ever does. See that your gun is on a line with the bird, for goodness' sake; pull trigger, and don't, I beg, "poke" it!

Following in the wake of the flocks of doves are a great variety of hawks and other predaceous birds. From the stately buzzard hawk, down to the tiny "blue darter," they swarm over all the fields. There is a hawk here called the "rabbit hawk," of which I have never killed but one specimen, and that being similar to your marsh hawk, but with a greater breadth of wing, and a much larger and finer bird. Indeed, a specimen I wounded very severely was almost eagle-like in size. I

was sitting on the banks of a little stream, bathing my hands and face, after a long tramp after quail, when, happening to look at my dog, I saw from his eager looks that he saw some bird in the air. To snatch my gun and look up was the work of a moment. Coming down, sailing along with no perceptible motion of his wings, was a huge bird, with square head and fierce, yellow eyes. I had no time to change my shells, so I gave him each barrel in succession. He fell like a stone to the second barrel, but the 8s were not heavy enough. Before I could reload he rose and flew off with a rapidity of which I could scarcely believe so large a bird capable. I am sure that he never caught another rabbit. I am very sure that at about twenty yards, the distance that I fired at him, I have killed mallards stone dead with the same gun and the same size of shot. I should like very much to see this bird dead, for they are very rare indeed in the South.

The "blue darter" (*Falco minor*) is the most destructive of all our birds of prey. Not much larger than a quail, they possess great muscular power, and can carry off a dove with no trouble whatever. Woe to the covey of quail that this little robber finds in the open. One gone, day after day he feasts upon them, until not a solitary one is left to pipe his cheerful Bob White in the morning, or to call in plaintive notes in the evening. He has eaten them all. No wonder the sportsman hates him. No wonder he crouches down by the fence and waits by the hour for his arrowy form to shoot over him. And then, with what real joy he sees the cloud of feathers float down the wind, and knows that the spoiler is laid low. The 8s do the work for him very effectually.

There is another species of hawk here fully as destructive as the "darter," but in another direction. He is called in the South, *par excellence*, the "chickadee hawk," and woe to the brood of little or big chickens that this Ishmaelite bird finds wandering from the farm-house, from under the watchful eye of the good wife. He swoops down in the quiet gray of the morning, ere the farmer's boys have fully opened their eyes, and the chickens are fondly looking for those worms of which they dreamed during the silly watches of the summer night. What a burrah! Aunt Dinah, the black cook, sallies forth with a broom, Jake her son, with a stool, upon which he has been sleepily nodding; her daughter, Cleopatra, with the frying-pan; the farmer, with a rusty double gun, shouting, "Where is he; where is he?" the dog, Bose, with an intelligent appreciation of the exigencies of the situation, having in the meantime seized Jake by the leg, while the audacious cause of all this uproar is sailing off with a chicken in his claws, which he will pick and eat with a serene content up Aunt Dinah, Jake, Cleopatra, the farmer and Bose. He repeats the experiment next morning with precisely the same result, only varied as to the actors in the tragedy, for Bose, with an impartiality highly to be commended, bites Aunt Dinah the next time, and then next morning bites Cleopatra, and so on until he gets back to Jake.

As you walk over our pine woods you will see little, curious mounds of fresh earth, thrown up at almost regular intervals. These are the homes of the "salamander," a little rodent, allied in species to the prairie dog. They are very shy, and not many Southerners have ever seen one. I was shooting quail one evening, and sent my dog, a mere puppy, to bring me a dead bird. As he gave the supposed bird into my hand several birds rose near me, and while marking them down I took hold of what I thought was a bird. A sharp bite, that met through my thumb, convinced me immediately that it was no quail. In an agony of pain, I flung it on the ground, killing it instantly. It was my intention to mount the specimen, but our cat made her supper on him, while I was eating mine. I regret it very much, for I have never seen one of them since that time. That they must be entirely vegetable feeders, I think admits of no doubt; but, as they work entirely in the night, it is almost impossible to find out much about their habits. They are singular little animals, and would well repay scientific investigation were it not for the causes mentioned above: their extreme shyness and their nocturnal habits. I have never seen any monograph about them, and I would be delighted to hear from some one on the subject.

Of all American forests, the "piny" woods show least bird life. You may travel miles upon miles, and see nothing in the shape of a bird, unless you are quail hunting, and then the coveys are not very plentiful. Occasionally you may hear the shrill trumpet of the blue jay, or the complaining, querulous note of the tom-tit, but solemn, weird stillness reigns over all things.

Sometimes a "fox-squirrel," your common red squirrel, will elevate his tail and career with railroad speed through the wire grass. He means business, this foxy denizen of the "piny" woods, and does not mean that any shotgun—choke bore or any other bore—shall bring him to bag. He is so tough, and selects such outrageously tall pines, that the wise sportsman rather avoids collision with him and pretends not to see him as he sits enthroned on the very topmost bough of the tallest pine in a radius of a mile, with his flag-like tail waving in defiance to the breeze and to the gentleman with the shot-

gun below, who, with a deep sigh over the limited capabilities of shotguns, "passeth." Yot, again and again have I killed them, but often with an expenditure of ammunition not at all in agreement with the value of the game. The only satisfactory method of shooting them is with the rifle. Then you fool Mr. Squirrel, indeed! For, as the whip-like report rings upon the still air, you see him quiver for a moment upon the limb, and then fall sheer a hundred feet without touching a limb.

There is a nuisance to the quail shooter here which you Northern sportsmen know nothing about. I mean a little bird having a tail longer, in proportion to their size, than the proudest of all peacocks; a true sparrow, called here the "swamp sparrow," but no more like the swamp sparrow of Kentucky than he is like a wild turkey. Any bird dog will take their scent, and I have seen the best-trained pointers come to a dead point on them. You should see the look of shame and indignation that crosses the dog's honest face when the game is flushed and found to be a sparrow. He hangs his head with a mental determination never to allow himself to be thus trapped again, but the very next one he falls again.

We have had no snipe-shooting here for a long time. In fact, such an impetus has been given to sport of late, and so much have most men improved in their shooting, that the Northern sportsmen do not leave many snipe for us of the South. The national game bird is Bob White, loved of all generous sportsmen.

A December quail is the hardest bird to hit, and being hit, the hardest bird to bring to bag for his size in the world. The man who can kill them can kill anything. You kill seven or eight in succession, and you plume yourself that you are going to redeem that miserable shooting that you did in the branch the other day. For, *entre nous*, you missed fully that many or more in the thick cover. You walk along with elastic steps, and lo! another point. You walk up your bird and you shoot; shoot with all your skill at that little fast diminishing point, and you are not rewarded with a single feather. You go on, and directly you shoot again, and this time the feathers float down the wind in a little cloud, but your bird only flies with accelerated speed. Next time you fire at fifteen or twenty yards and your bird is torn all to pieces. Thus you shoot all day, but while making a fair bag you wonder why you cannot make your uniform doubles, as you did in October. No man can do it. The best field shot in the world can make but few doubles on December quail. Not any with whom I have ever shot.

Many writers for your paper state that they kill most of their quail within twenty-five yards. Such men do not need any but the most ordinary guns. A good gun will render all birds killed at that distance worthless for eating, or nearly so. My own opinion is that if sportsmen were to use No. 6 instead of No. 8 in their choke-bore the shooting would be much more satisfactory. Then deliberate shooting in the open will be the rule, and not the exception. But I have yet to see the gun, no matter who the maker, that will uniformly make a good target with No. 6 at forty yards. If thrown close enough there is a want of penetration. For such a gun, if any gun-maker will make me a cheap and good one, I will pay him for it and make him famous all over the world.

In concluding this rather rambling and decidedly desultory article I must congratulate you upon the last number of your paper. Full of all that is of interest to the sportsman, it goes beyond that, and is full of interest to all genial, hearty men. The man who wrote the article last fall about Southern quail-shooting, has been there, and here's the hand of "gude fellowship" to him, and an earnest invitation, should he ever come down my way, to come and see me. To him, and to such as he, the laich-stirr always hangs outside. ST. CLAIR.

Lawtonville, Ga., Jan. 21st.

A SANGUINARY DEER HUNT.

But I never chose to put more than a single ball into my place; and in this manner, being a good marksman, I procured a considerable quantity of game.—New York.

T ENCO I have quoted from that delightful book, Cellini's "Memoirs," hits me very well, for I shoot always a rifle; but my companion—well, the Captain is something like one of the speakers in a conversation in the last number of *Punch*:—
Old Boy—What's your father?
New Boy—Foot, painter, sculptor, architect and musician.
Old Boy—Criminal! Is he great?
New Boy—The greatest that ever lived.
Old Boy—I never! And what are you going to be?
New Boy—The same as my father, only greater.

Were he interrogated he ought to answer—although he would not, as his modesty sits astride the pyramid of his perfections in the myriads of wood and water craft, looking as big as any of the pile—something in this way:

"Shoot any with a rifle?"
"Good as they make 'em."
"How are you with the shot gun?"
"I can handle a shot gun twice as well as I can a rifle."
"I know he killed 'em pheasants last fall."
"Ever do anything with a fly?"

On the morning of Nov. 4th we left camp at light. Some snow had fallen, and the day was dark and disagreeable. The guides took the canoe upon their shoulders and on we went. It seemed a very long distance, and I felt as though we were turning too much to the left, but I did not offer any suggestions, since I had thus far proved myself the lost man. A mile brought us to the mouth of the river, the canoe being carried on our shoulders and away we went. We had proceeded about two miles when one brother said to the other: "Gideon, we are on Scraggly Lake." Landmarks soon convinced Gideon that his brother was right, and about we turned. I was careful not to make any unpleasant remarks about this mistake, feeling that I was in their hands. Again we landed, and the brothers took the canoe up with a will, not allowing it to go any farther. Again the waters of the river were reached, and we were on our way. One of the guides will be fully appreciated when it is known that these men had for years lumbered upon these very waters. At Pleasant Lake more trouble presented itself: the wind was blowing squally, and with three men, dog, gun and ax in our birch, I did not deem it prudent to attempt to cross the lake, therefore we skirted the shore until the wind had less ruck, and then shaped our course to the landing in front of the house of Dock Wooster. After the landing, I saw the lake for the first time. Its close cut features, fine blue eyes, and light hair reaching to his shoulders. To him I said: "I am one of the lost tribe of the children of Israel." Comprehending at once my situation, he took me into his log-house, where I met his wife and eight children. Here I got thawed out (for ice was upon all in the birch), something for myself and guides to eat, and paid them well for conveying me to Wooster's. About 10 o'clock Dock Wooster announced himself ready, and by canoe took me to a point in the

direction of our own camp, and a tramp of two hours brought us to the white sandy beach of West Musquash Lake, whereupon I fired a shot and was answered. Soon we met Mr. Benson, and I rushed forward and grasped his hand, he expressing the same feelings of joy at meeting me. Three shots were then fired at intervals, as a signal that I had returned. The men returned one by one, for my friend Benson had spared no trouble in the effort to find me, engaging the whole crew of lumbermen, under Joseph Neal, who had just arrived, to begin operations. Mr. Neal, with all his men, gave up their time, and absolutely refused pay. When Mr. Thornton, our guide, and Mr. Neal were nearing our camp, I went down to meet them. Thornton sprang forward to me, saying, "My God, is it you?" and Mr. Neal came up and gave me his hand as though I were an old friend. Men with such hearts and generous impulses are not always at hand to help the lost and distressed. After a good deal of conversation of the day was devoted to a discussion of the catastrophe. I then knew how faithfully my friends had continued to hunt for me.

To those who have followed this account I will add this lesson as I see it. Do not leave your compass in camp as I did, even when going out with a guide. Always have a map. When you feel you know the course, do not let water seen in another direction divert you from your course. If lost at night, retrace your steps in the morning. I would have so done, but supposed the lake one of a chain upon which I was camped; it proved one of another chain of lakes.

It seems to me that people in the rural districts are more generous and willing to lend aid to others, without reward, than people living in our cities. My misfortune became known in Bangor before my return, and a short notice appeared in the *Whig*, but I had written my wife and Mr. Neal, and all his men, gave up their time, and absolutely refused pay. When Mr. Thornton, our guide, and Mr. Neal were nearing our camp, I went down to meet them. Thornton sprang forward to me, saying, "My God, is it you?" and Mr. Neal came up and gave me his hand as though I were an old friend. Men with such hearts and generous impulses are not always at hand to help the lost and distressed. After a good deal of conversation of the day was devoted to a discussion of the catastrophe. I then knew how faithfully my friends had continued to hunt for me.

Joseph Jefferson was that very evening to appear in the city as Rip Van Winkle. My wife greeted me at my house door, when I pulled the bell, and after surveying me for a moment, said, "Well, old Rip, you have come." *Bangor, Me., January, 1880.* H. N. FAIRBANKS.

We supplement our correspondent's experience with this account of what, in the "sporting" parlance of the day, might be termed a six days' go-as-you-please walk. There was no purse up, but the man was walking for his life:—

This hybrid individual was by occupation a *voyageur* in summer and a trapper and hunter in the winter season. His mental caliber was very ordinary, being unable to read or write, and his habits apathetic, living much alone. Some of his ponies having strayed off upon the prairie during the winter months, he went in quest of them. The prairie was the native heath to him, which he had trodden from infancy with the same assurance that ordinary mortals walk the pavement. He had no fear of being lost; every depression in the snow-clad earth, every stunted shrub, was a landmark to guide him on his way. After an absence of half a day a storm arose which compelled him to seek shelter. Day followed, and night again found him still walking and the storm unabated. At length his moccasins wore off his feet. He took the long "militaires" from his hands and tied them on in lieu of shoes. Then he walked on through the third, fourth and fifth days and nights, supporting life by chewing his leather hunting shirt. The sixth morning found his feet frozen and striking the beaten path like bits of wood; his hands were in a like condition, and his face a little puffed. During the last day, however, some wandering Indians discovered him in an apparently dying condition. They took him to a neighboring fort, and after the surgeon had barked him of portions of both hands and feet, and taken a piece from his face, he got well.

When found by the Indians, it is worthy of remark that, with the exception of exhaustion, the man was mentally more acute than when he was first lost. During the fearful days and nights the combination of terror, despair, and, above all, longing for human companionship, had striven against that dull intellectuality and apathetic temperament in vain. There was an indifference, and to ignorance of, the finer parts of the torture which effectually shielded him from danger. He simply did not know enough to experience any of the feelings which would have wrecked a higher order of intelligence.

And here is the story of a man who was lost on the plains in February, 1878:—

This unfortunate person was an officer of the company, and had started in the depth of winter, along with four others, to visit a distant post. Their means of conveyance were horse-sleds, instead of the ordinary winter vehicles of the country, snow-shoes and dog-sleds. The gentleman was a first-rate traveler, and accustomed from boyhood to such work. He knew the country well, and for a man of his age and constitution the severity of the winter had had too few terrors. At the crossing of the White Mud River he volunteered, as the party with which he traveled had run short of provisions, and their sleds, in consequence of deep snow, traveled heavily, to push on alone, with the intention of sending back assistance from the fort. He followed the track correctly until nightfall, when he lost his way, probably in an attempt to find a crossing. The following morning he resumed his journey, but in the wrong direction, and after another night spent on the plains, running about in a circle to preserve warmth, the third day's travel brought him within thirty miles of the fort, and very far distant from the track. Here hope seemed to desert him; and, after having hung a portion of his clothing upon a tree to attract the attention of any passer-by, he lay down and was frozen to death. When his body was recovered, the wind was one hand on his heart, the other containing a compass.

The half-breeds who found his body read by their tracks in the snow the whole history of this heroic fight for life—

read it with the same ease that you read the account from the page before you. There was not a foot-print or mark anywhere but formed a link in the chain of evidence. They knew from the varied hardness of the snow about the man's tracks just how long before they had been made; from the length of the stride when he was walking deliberately and when excitedly, and adduced therefrom the state of mind he was in at the time. They knew he had not taken proper precaution to sustain his falling strength, because the leather of his moccasins and moccasins tows, which he might have eaten, was untouched. It was very easily comprehended by these experienced plain-dwellers, too, that the poor victim, on realizing himself as lost, must have grown so excited as to lose his presence of mind, or he would have known his necessary general position with regard to the river, and have acted otherwise than he did. With his practical knowledge of the use of a compass, and of the country over which he traveled, he could have brought himself to any point he chose. But the dread terror of being lost had deprived him of reason in three days.

Natural History.

NOTES ON THE PINE GROSBEAK. (*Pinicola enucleator*.)

YESTERDAY I saw three of these beautiful birds industriously picking up their dinner in a patch of woods. They were quite tame, and I drove within twenty feet of them, and paused quite a while to observe and admire them, as they are old friends of mine. Four years ago they were quite plenty in this vicinity, and a large flock of them came regularly every morning to feast upon some frozen apples that hung on a tree within ten feet of my window. They were very tame, and sang so sweetly that I determined to capture some of them if possible. Fixing a sliptoe upon the end of a fishpole I succeeded in roping in a pair of them; the male was a young one, and the female I judged to be two or three years old. There was an old male in the flock, gorgeous with his beautiful scarlet plumage, that I tried very hard to capture; but he was too wary for me. I got the noose over his head several times, but he would twist out of it with scarcely an effort, and never move from his perch nor cease his cheerful song. He always appeared glad to see me, and to be quite interested in my experiments; he would nod and wink at me in the most knowing manner in the world, and, in spite of my best efforts, he preserved his liberty, and after a few days I saw him no more.

The pair that I had captured I placed in a large breeding cage that was about three feet square; they did not appear to be at all alarmed, but took kindly to their new home and at once commenced eating, and in less than an hour they were twittering and singing, happy and contented. For many weeks they appeared to thoroughly enjoy themselves, and became so tame that when I let them out in the room they would fearlessly alight upon my head or shoulder and feed from my hand. I never saw such beautiful feathered pets; they kept up an almost constant song from early dawn until every one in the house had retired for the night. Their song was not loud but very sweet and musical.

We were all very happy in their companionship until, alas! one fatal day, inspired by my evil genius, I brought home a newly made kingbird's nest and carefully placed it in one corner of their cage, and all of us gathered around to see what they would do. The male did not pay much attention to it, but after a cursory glance settled down on his perch and resumed his song. The female from the first appeared to be very much interested; her eyes glistened, and her head kept bobbing and turning, and as soon as the nest was in place she hopped up and perched upon its edge and critically examined every portion of it. She appeared very much pleased, and with a low expressive chirp alighted upon the perch, and with many knowing nods and smirks and pretty little ruffling of her feathers, she sidled up to her companion, all the while talking and crooning in her most silvery accents, and throwing her wing over him lovingly nestled close to his side, and in dulcet tones, with drooping head was sweetly murmuring the "old, old story," when he the heartless brute—awkwardly backed out from her loving embrace, and nonchalantly walking over to the feed dish commenced eating. With a plaintive chirp she followed him up and ardently pressed her suit, but when she approached him he would retreat, and after several trials with no better result, he took refuge in one corner behind the bath dish. Then, with a despairing glance at the loved nest overhead, with each particular feather standing on end, and with a harsh, discordant croak that plainly said r-r-r-venge, she went for him tooth and nail, and whacked and banged him around until, fearing for his life, I interfered and made him desist. No sooner did I take my hand from the cage than this incarnate fury pitched into him again, and I was obliged to separate them.

After a week of solitary confinement, during which neither of them uttered a single note of song, I returned him to the cage with her. No sooner had I shut the door than, with dilated eyes and open mouth, this virago went for him again and knocked him clear across the cage. I picked up a little stick and struck her two or three times

and made her leave him. He had been very meek and forbearing up to this time, not making the least show of resistance; but no sooner did he see the effect of my punishment upon her than he boldly asserted his manhood and bravely sailed in and gave her a thrashing that completely subdued her.

There was no quarrelling after this. She sulked and moped in her corner, refusing food and drink, and a few days after we found her dead—a victim of blighted affection. After she was gone a change came over the male; he uttered no sound save a mournful chirp, and appeared to miss his companion sadly. He gradually pined away, and in less than two weeks we "laid him gently by her side." I do not propose to adorn my simple tale with a moral, but cannot forbear expressing the hope, dear reader, that neither your end nor mine may be like this.

Springfield, Mass., Jan. 15th.

SHADOW.

WHITE DEER.—The Richmond (Va.) *State* has recently contained a number of notices of the killing of white deer in Virginia, and has devoted some space to speculations as to the origin of this new "species" and the causes which brought it into existence. The strain on the intellect of the scientific editor of our contemporary ought to be relieved, and we therefore take pleasure in assuring him that white deer are not very uncommon, scarcely more so than white robins, and that they are killed not infrequently in all sections of the country. Albinism is a freak of nature too commonly observed to excite much surprise.

BIRD NOTES FROM PENNSYLVANIA.—From the *Daily Local News*, of West Chester, dated Feb. 7th, 1880, the following mention of the bluebird is taken:—

Mr. Speakman Gray, of Caln Township, erected a bird box on his premises, which was taken possession of during the warm weather we had a few days ago by a pair of bluebirds. Three eggs were laid by one of them in this box, which was blown down in the recent storm and the eggs broken. The birds were hovering around the premises for several days in search of their nest, and were apparently in great tribulation over their loss.

Hawks, other than sparrows (*T. sparverius*), and red-shouldered, are rather scarce.

I have this winter seen or obtained twenty odd of the red-shouldered species, all of which were in the adult plumage; not one young bird was noted.

Other season's collectors hereabouts considered themselves fortunate if two or three adult red-shouldered hawks were taken. An immature bird of this species, however, was not looked upon as rare or specially desirable. The query with the writer is, what has produced the unusual presence of only the adult red-shouldered hawks?

Sparrow hawks and an occasional sharp-shinned hawk almost daily enter into West Chester and regale themselves on English sparrows, to the great satisfaction of the citizens of this place.

Crow blackbirds and robins are now abundant. Birds of these species in limited numbers may be found as residents nearly every winter.

A lady, whose veracity is unquestionable, tells me that some few winters since she caught alive a number of snow-birds (*T. hyemalis*). One of the number got so tame as to follow her about the house and yard; when called it would come and alight on her hand.

One day, in her yard, our informant was engaged in feeding her pet, it sitting on and eating from her hand. While thus occupied a cooper's hawk swooped down and snatched the bird from the lady's hand. The hawk after committing the depredation flew to a tree a few yards distant, and only vacated it after several stones had been hurled (no doubt with effect) at him. B. II. W.

West Chester, Pa., Feb. 19th, 1880.

ABOUT THE BOHEMIAN WAXWING.—Brookport, N. Y., March 2d.—Editor *Forest and Stream*.—In Dr. Sterling's notice of the Bohemian waxwing (*Ampelis garrulus*) (*FOREST AND STREAM*, Feb. 26th) are several errors. So far from "never before been taken in hand by an American naturalist," previous to 1839, it was a well-known though rare visitor to several States. Audubon in 1835 mentions it as occurring in Pennsylvania and Long Island, several being shot in 1831 and 1832. In the latter year it also occurred in Boston. Several were shot in Nova Scotia in 1834. From these specimens Audubon's figures and description were taken. Dr. Sterling is also in error about any doubt existing respecting Richardson's specimens. Mr. Drummond shot several in March, 1836, near the Athabasca River, and Richardson met with it the same year at Great Bear Lake in docks May 24th. He also saw a flock of several hundred on the Saskatchewan the following year in May. Bonaparte describes and figures the bird from Athabasca specimens in 1828 and Richardson in 1829.

As to Audubon's letter and Dr. Kirtland's skin there must be some mistake, as Audubon was well acquainted with *A. garrulus* as an American bird before 1839.

FREEMOINE.

We thank our correspondent for so promptly calling our attention to this very manifest error, and feel ourselves to blame for the inadvertence which allowed it to appear in these columns.

The statements of Audubon and Richardson are so positive as to the occurrence of the bird at the dates they mention that there seems to be no possibility of a doubt as to Dr. Sterling having made some mistake, Rich-

ardson's descriptions are taken from a male and female killed at Great Bear Lake May 24, 1880. Bonaparte's from a female killed at Athabasca March 20, 1835. Full information on the early history of the species can be obtained by consulting the authors referred to.

BEAVER-CATCHING IN CANADA.

ONE of your correspondents has rather a queer story about having kept a mink ten hours under water without drowning. That mink must have been specially built for the purpose, or else provided with some patent apparatus for breathing under water, because an ordinary mink will drown in about five minutes. I can assure you of this from my own observations, as I have drowned them often, when caught in steel traps, in order to keep the skin white and clean. If they are killed with a stick, it leaves a red patch on a pelt, which spoils its appearance.

I also had occasion to drown a beaver once, in order to settle a point between a Canadian trapper and myself; he maintained that a beaver could remain under water for an hour or more without drowning, while I thought that of an hour would be the utmost. We selected for the experiment a middling sized beaver, with the following results. We secured him by putting his fore paw in a No. 3 Oneida trap (Newhouse's), and shoved him under water. After three minutes he showed signs of distress, and bubbles of air began to escape from his mouth, he struggling at the same time to rise to the surface; five minutes, still struggling slightly; ten minutes, we drew him up quite dead. Possibly the great exertions he made to escape exhausted him sooner than if he had been free, but I don't think it could have made a difference of more than a couple of minutes.

You will probably wonder how we could select a beaver to suit our purpose. Let me explain how they are caught here in the winter under favorable circumstances. First of all the lake must not be too large, as the work is rather tedious. From five to six hundred yards long is considered quite large enough for two men to work over in one day. The tools required are an axe, a shovel and an ice-chisel, the latter being nine or ten inches long, three-quarter inches wide and half an inch thick, with funnel-shaped top to insert a handle six feet long. Armed with this, a hole is then made in the side of the lodge near the surface of the ice, which is the thinnest part. At the first stroke the beavers crawl on the premises and make a rush for their holes, which are situated at intervals all round the lake, but generally where the banks rise abruptly. If the lodge is a large one, there is about fifteen or twenty of these holes. What we call a large lodge here contains eight or ten beavers—two old ones, four two years old and four young; they very rarely exceed that number. The outlets of the lodge being barred with a couple of stakes to prevent them from coming there to breathe, a search is then made for their place of refuge. This is done with the ice-chisel in the following manner: Standing about three feet from the shore the ice is struck with the point of the chisel; this is repeated at every step in going round the lake. On nearing a hole the ice emits a hollow sound on account of its being much thinner, owing to the going in and out of the beavers. Its exact location being found, the ice is cut away from the entrance by the chisel. This operation is performed till all the holes are stopped. A small sapling four or five feet long, with a slight bend in it, is then cut; this is inserted through the water and into the under-ground hole; if the beaver is there its presence is soon detected with the point of the stick. The ice-chisel is brought into use once more; a couple of strokes are given over the beaver's head on the shore. The roughly frightened one turns round to the shelter where, but is met at the entrance by the stakes; not daring to go back, he crouches on the bottom near the stakes. The hand is then inserted in the water; its hind paw felt and taken hold of; then drawing it half out of the water, a blow with the axe is given on the backbone, and he is thrown on the ice. Two are sometimes found in the same place. The above performance is renewed at each hole, till there is no more.

Some Indians have dogs trained for this kind of hunt; it saves a great deal of labor, as their sense of smell enables them to find their holes immediately.

Godbout, Canada. N. A. COMBAT.

PRAIRIE CHICKENS DRINKING.—New Bedford, Neb., Feb. 8th.—Editor *Forest and Stream*.—Having frequently heard it stated that "prairie chickens" drink nothing but dew, collected from grass and leaves, I have thought the following item might be of interest to some of your many readers.

Last November, while waiting for geese on one of the numerous sand-bars in the Platte River, a flock of pinnated grouse came from the prairie and lit near the water; after looking around for a few minutes they walked in where it was a few inches deep and commenced drinking. They stayed on the flat about half an hour, taking frequent sips, and at times were within thirty feet of me. Have frequently seen large flocks of them drinking just before sunrise, but never before had been able to get nearer than thirty yards. N. W.

We should be glad to know whether these "prairie chickens" were pinnated or sharp tail grouse.

CAT AND RATTLESNAKE.—The following blood curdling tale is told by the *Americus, Ga., Republican*:

About three weeks ago, during the beautiful sunny weather we have had which induced the trees to bud and bloom, I was walking in my garden one morning, thinking about preparing for an early start for spring vegetables, when I saw a large rattlesnake sunning. My first impulse was to go to the house, get a gun, and kill it. But looking around, I saw a very large house cat cautiously creeping upon the reptile. Anticipating a fight, and equally desirous of getting rid of the cat, which killed chickens, I concluded to witness his attack upon the snake. The cat crawled upon its stomach, pulling along on its feet, whisking its tail from side to side, and every now and then raising its neck to view the snake. Now and then eight or ten feet off the snake suddenly coiled up; sprung its rattle, faced the cat and darted its forked tongue out rapidly. The cat commenced a rapid retreat,

around the snake, so fast in fact that the eye could hardly keep up with it. At last it got near enough and made a dart at its enemy, but through providential reason went high above the snake, which also struck at the cat, thus breaking its coil. The cat went too far and by the time it turned to face its foe, the reptile was again coiled and ready for the attack. The same method was adopted and carried on for four or five times, the cat occupying at least half an hour. The cat wished to catch the snake, but seemed aware that if it missed the neck it would be certain death. At the sixth assault they met and instantly the snake was wrapped in several folds around the body of the cat, which used its sharp claws with deadly effect. The cat had been bitten on the head and neck several times, and both continued to fight. The snake was torn nearly to shreds, but did not use its coil around its victim. The poison was swift and deadly, but before the cat died it caught the snake's head in its mouth and crushed it, and fighting they died, the snake enwrapping the cat in its coils. The snake measured four feet eight inches, and had thirteen rattles.

HOW TO HANDLE SKUNKS.—Ferrisburgh, Vt.—Editor *Forest and Stream*.—I do not know what skunks can do when lifted by the tail, and do not care to experiment with the animals for the good of science and natural history; but I remember when I was a youngster a skunk got into our cellar, and my big brother having heard of this as a safe way of handling them, tried it successfully on this one. With a pair of tongs he raised him carefully by the tail, carried him out doors, gave the holding of tongs and skunk over to me, proud as a drum major to have so important a duty assigned me, and then blew the unwelcome visitor's brains out with a heavy charge of shot, with no unpleasant results to any but the skunk. As I said before, I do not know what he could have done, but so suppose he would have done his worst, as to be so transported cannot be very soothing to even the tranquil soul of a skunk. AWAIISSOISE.

COLLISION BETWEEN A BLUEBIRD AND A LOCOMOTIVE.—Stoney, Morris Co., N. Y., March 6th.—Editor *Forest and Stream*.—To-day, as I was walking along the track of the D. L. & W. R. R., I noticed a bluebird perched on the telegraph wire. The afternoon mail train came thundering down the track, around the curve. When it was but a few yards away, the bluebird started to cross the track; but either through fright or by miscalculation, it struck the boiler of the engine and fell, stunned, to the ground. I picked it up, and it crawled away a few yards. Large flocks of blackbirds, robins and ducks have made their appearance, and I anticipate good sport with the latter during the next six weeks along the Passaic River and in the "Great Swamp."

HARRY D. B. PAGE.

Fish Culture.

THE MOVEMENTS OF SALMON IN THE SEA.

WHEN the results of trustworthy observations are interpreted with caution, certain conclusions present themselves respecting the movements of salmon in the Newfoundland and Labrador seas, which may be accepted as a first approximation to correct views. The subject is important, because it becomes a guide to the movements of other species of fish from which information of practical value may be gathered.

As the results of limited personal observations, some inquiry and a good deal of careful searching into records, I have arrived at the following first general conclusions as to the habits of salmon in the sea, on the coasts of Newfoundland and the Atlantic Labrador:—

1.—Salmon in the sea *there* move and feed in separate schools throughout the greater portion of the year, and in different localities they are taken in nets on the coasts from the early part of May to November. Alternating schools are always probably on the coast.

2.—The schools are distinct in respect of age and sex, keeping apart in so far that adult salmon, or salmon, say, of the fourth year from the hatching of the egg, school and feed together; salmon of the third year, or grilse, feed and school together; salmon of the second year, or smolts, do likewise. In these particulars they resemble the cod and the herring, which feed and school and have separate winter haunts according to age.

3.—The adult males do not school and feed with the adult females in the sea, nor do the males of the third year (grilse) school with the females of the third year in the sea.

4.—All the schools have a definite sea area as their home, which may be represented by the area immediately opposite to the rivers in which they were born, expanding seawards, so that the area occupied by different schools overlap one another. They do not confine their visits to fresh water to any particular river, but visit for short periods rivers adjacent to the one in which they were born. Adults always endeavor to reach the river in which they first saw the light, for spawning purposes.

5.—All schools approach the coast by well-defined belts, paths, and almost always in the same direction, fighting against prevailing winds and currents. In the very early stage the general movements of the cod and the herring. Should prevailing winds temporarily change the direction of the tidal currents, the fish accommodate themselves to the change. Should an unusual abundance of ice be pressed upon the coast in the spring, the fish remain outside of the ice or endeavor to skirt it. They refuse to pass under melting salt-water ice, probably on account of the cold heavy brines descending from the melting ice. They do not appear to swim fixed or floating ice in the winter, which is not melting. The cod and the herring are also influenced by the same conditions.

6.—Approaching the coast in the spring they feed voraciously upon caplin, sand-eels and young herring, which are also near the shores at the same period. School follows school in regular succession, but the old males are first, the old females second. They are followed at an interval of a fortnight or so by the male grilse; respecting females of the third year there is no evidence available.

The winter homes of the great body of salmon are on the seaward slopes of the sea-bottom outside of the 100-fathom line of soundings or thereabouts, and generally it

would seem just out of the reach of the harp-seals. There are probably two million harp-seals wintering on the coast of Newfoundland, but although these active marauders frequently bring cod and "turbot," the Greenland halibut, and flat-fish generally, to the ice-floes and ice-pens, I have not heard of a single salmon being brought up by seals. Nevertheless, since large salmon are caught in deep water off the island of Fogo up to Christmas, schools of this fish are on the coast, in deep water, at that period, and they have been taken there in seal nets. In such deep bays as Trinity, where there are from 120 to 320 fathoms of water, salmon are not unfortunately cast upon the shore during winter storms, but these are probably the only spawning fish, or schools swiftly resisting fresh water under the ice.

In order to form a proper conception of the general spring movement of salmon in the sea on a grand scale it is necessary to refer to a map of Newfoundland and Labrador. The distance from Burgeo Islands (longitude 57 deg. 40 min.) on the south coast of the island to Ukusaisalik (latitude 56 deg.) on the northern Labrador is about 1,500 miles. The salmon strike the whole of this long extent of coast line between May 16th and July 16th, a period of sixty days. The general absence of ice on the Labrador coast diminishes this period to six weeks. This is what we see, but from it we must not infer that detached or isolated schools are not constantly coming from and going to the mouths of rivers at all times of the year. The presence or the incoming of food at the spring season of the year brings the great body of salmon shoreward at that period.

They stream in from deep water to shallows near the shore to feed on the forms of life which are born there, or which gather for a similar purpose, or which are drifted shoreward by the never-ceasing action of tidal currents, for these play a very important part in the distribution and maintenance of marine life on all the coasts of northern seas.

The army of fish bearing the colors of *Salmo salar* advances from the continental submarine slopes in successive battalions toward the coasts through 9 degs. of latitude as far as Fern Bay, some twenty miles beyond Ukusaisalik, for there the salmon may be said to cease. They do not appear again until Ungava Bay is reached, inside of Hudson Straits.

SEX OF THE SCHOOLS.

Newfoundland waters offer no exception to the rule that the males come first to the coast in the general spring movement. It has long been well known as a natural law, with rare exceptions, that the males of most species, be it of fish, flesh or fowl, are the first to gather together with the increasing warmth and light of spring. Darwin pointed out this fact with regard to the salmon many years since. He also mentioned the great loss of males every year from fighting and tearing one another on the spawning beds. He quotes numbers to show that among salmon the males arrive first at the mouths of rivers, the females following after. Thus in 1865 Mr. Baist took sixty males out of seventy fish caught in the first runs for obtaining the ova. In 1867 Mr. Baist, at the outlet, took ten males and one female. Mr. F. Buckland records the disproportion between males and females in the first runs of trout. Mr. Wilmot goes so far as to speak of "the indisputable fact of grilse taken in rivers being always males." Mr. W. H. Hudson, of the Connecticut State Fishery Commission, mentions that all the salmon first caught and opened in the Connecticut River proved to be males.

SIZE OF THE FISH IN THE DIFFERENT SCHOOLS.

The following enumeration of the size of the mesh of nets used in different districts refers to different periods of time, going back several years. It is introduced to show how experience dictated the mesh best adapted to the largest quantity of fish, regardless of the consequences to the fishery of the future. Acting upon the ascertained fact that the schools first approaching the shore consisted of the largest fish, subsequently followed with great regularity by schools of a much smaller size, the mesh was varied to suit each school. It may be premised that nets are generally set at right angles to the shore and chiefly at headlands. They are set singly or in fleets with a pound or trap at the extremity according to the strength of the tidal currents.

East Coast.—1. Conception and Trinity Bays.—First run May 20th to July 5th; mesh 6 inches. Second run July 5th to Aug. 10th; mesh 6½ to 5 inches.

2. West part of Notre Dame Bay.—First run June 6th to 15th; mesh 6 inches. Second run July 1st to 10th; mesh 6½ inches.

3. Notre Dame Bay (southern part).—First run June 15th to 20th; mesh 5¼ inches. Second run July 1st to 10th; mesh 4½ inches.

4. Cape St. John to Quirpon.—June 20th to Aug. 10th; mesh 6½ to 5 inches.

5. Twillingate and Fogo Islands.—Very large salmon taken in deep water at the headlands in November and December up to Christmas; mesh 8 to 9½ inches.

6. Hamilton Inlet (Labrador), July 1st to Aug. 5th; mesh 6½ to 4 inches.

7. Northern Labrador (North of Cape Harrison), July 15th to Aug. 15th; mesh, 6½ to 5½ inches.

It will be observed that there is only one run of salmon specified for sea or headland fisheries north of Cape St. John, Newfoundland. The grilse and smaller-sized salmon are taken in the rivers as far as Quirpon, but rarely in the sea, as is the case elsewhere to the south. The relative size of the salmon taken at the headlands and at the mouths of rivers and in rivers, may be gathered from the fact that between Cape John and Quirpon 35 to 40 salmon are required for a tierce of 300 lbs., but of the river salmon it takes from 100 to 120 to a tierce. Mr. Knight states that he has taken salmon in November, and counted the ova. A salmon of 15 lbs. gave 8,600 eggs of the size of particles of shot. The salmon would probably be in condition to spawn in April.

The capture of salmon about islands destitute of rivers is worthy of note. Such islands are:—

1. On the south coast—the Burgeo Islands, Pass Islands.

2. On the east coast—Fogo Island, Twillingate Island, the Horse and Barbe Islands.

3. On the Labrador—Grady Island (latitude 53 deg. 45 min.).

The movements of grilse and small-sized salmon on the

* Descent of Man.

* Evidence before committee of the House of Assembly, 1878.

Atlantic Labrador coast is an interesting question, which may be noticed subsequently.

DIRECTION OF MOVEMENTS IN THE SEA.

In describing local movements I shall commence with the south coast of Newfoundland, then turn to the east Atlantic coast of the island, and progress northwesterly toward the Fjord, or Farn Bay, on the Northern Labrador. Here *Salmo gairdneri* ceases to put in its appearance, and is replaced by *Salmo inermis*, or the true sea-trout, which has its home in these northern waters, and where it attains a size and beauty I have never seen approached in the Gulf of St. Lawrence.

District of Fortune Bay (south coast).—The rule in this district is that salmon are always taken moving toward the west, or, as it were, out of the bay. Prevailing winds affecting the tidal currents sometimes change the direction the fish are pursuing.

Placentia Bay (south coast).—The large fish are always taken moving to the southwest, or out of the bay. The large salmon here are now never taken but off headlands or situations confronting the open sea.

Conception Bay, Trinity Bay.—On the northern as well as on the southern side of these bays it is alleged that salmon are always, as a rule, taken as if coming from the west, and, as in other bays already mentioned, as if going out of the bay.

French Shore (so-called), Cape John to Quirpon Bay.—Salmon are generally caught on this stretch of coast as if coming from the south, or out of the bays. Generally it may be said that the salmon taken in nets on exposed portions of the coast are almost always caught as if moving out of the bays. Of course, this rule does not hold good in the extremities of the deep bays, for there the tidal movements are guided by the configuration of the land.

In studying these and similar observations, which show remarkable regularity in the movements of the salmon, we must give attention to three leading features: First, to the winter homes of the salmon; second, to the supposed habit of biennial spawning; third, to the relation which most of the movements of all kinds of fish bear to tidal currents.

The supposed habit of biennial spawning gives us two classes to deal with: those which come on the coasts to seek spawning rivers, and those which follow their food, and occasionally seek fresh water for sanitary purposes, such as freeing themselves from external and internal parasites. It is unnecessary for the purposes of the present outline sketch to enter into any discussion relative to the biennial spawning habit, but it is worth a glance at the winter homes of the salmon and the life of the sea in deep waters where winter fishing has long been carried on, and by its results has enabled us to become indirectly familiar with the teeming submarine valleys and floor of the ocean, a thousand feet below the surface, on the south coast of the island of Newfoundland.

WINTER HOMES OF FISH.

The south coast of Newfoundland descends like a sloping wall, or in abrupt terraces, in many places to depths of 1,300 feet and even 1,000 feet. The sea there, close to the shore line, furnishes us with a wonderful spectacle of fish life. Every winter, including October to April, upward of 30,000,000 to 50,000,000 pounds weight of codfish are lifted from a depth ranging from 600 to 1,300 feet and brought to the surface. If we transport ourselves in imagination to the floor of the ocean, one, two and three miles from the bleak wall of rocks which form the ocean floor of the south coast, we may see upward before us a series of terraced slopes, with many deep-cut indentations or valleys, rising to an altitude of 1,600 to 2,000 feet, and of this huge escarpment five-sixths lie below the surface of the sea. These serrated slopes, and the sea floor from which they rise, are the winter homes of innumerable fish. The large cod are at the bottom with vast schools of young herring and caplin, for these are sometimes found in their stomachs when caught. The breeding herring occupy the higher slopes and lie closer inshore. They are found in a zone which extends from 60 fathoms or 800 feet up to the surface at the edge of, and under, the ice which covers the indentations or floors. The adult or full-grown salmon I conjecture are also roving about the deeper slopes and bottom, for they rise with and follow the caplin to higher levels in the spring, and are taken with these fish in their stomachs. The breeding herring soon become satiated with such abundant food, and the caplin, as they near the surface and approach the shores in June, are followed by the second run of the smaller or younger salmon which are called by the fishermen "the caplin school," because they approach the shores simultaneously with the caplin.

Some details as to the whereabouts of the profound depths close to the shore line to which I have referred may be acceptable, for in relation to the fish life they sustain they have no parallel in any part of the cold water-world on this side of the Atlantic. They have their representatives off other coast lines in the form of abrupt sandy slopes, but these are from 50 to 100 miles from land.

Baie Desespoir leads out of Hermitage Bay and the entrance to it is 2½ miles wide, with a depth exceeding 200 fathoms or 1,620 feet. Close to the coast on either side there is more than 100 fathoms of water. It is partly submerged fjord, and has many kindred records of former ice action on the bold front of the south coast. In Belle Bay, which lies within the well-known Fortune Bay, 1,000 feet will not touch the bottom in many places, and but as it were, a few rods from land. Towards the head of Placentia Bay we find on the Admiralty charts that the waters make a line three or four miles out there, all along this coast, three or four miles out there, in profoundly deep water. A mile and a half from Cape La Hune it takes a line 650 feet long to reach the bottom. Near to the Burgeo Islands 1,000 feet will not suffice. In La Poile Bay we may fish with a line 700 feet long, but near Sagona Island we must take 1,000 feet and more to touch the bottom with our bait. Along this southern coast of Newfoundland, fishing operations are conducted from the winter months, from October to April, and in order to form some conception of their magnitude in times past, we may turn to an official report published some years ago by the Newfoundland Government. From this report we glean that the actual catches of codfish between Cape Bay and Point May then numbered about 2,000 souls. During the winter they caught 145,

000 quintals of fish. This quantity, at 113 pounds to the quintal, would represent 16,240,000 pounds of cured fish, or more than 50,000,000 of fresh codfish lifted from the sea by 3,000 men during the winter months, fishing with lines and from boats. The entire fleet of Gloucester, Mass., did not bring into port a greater weight of all kinds of fish during the whole of 1879. In addition to the codfish there are the winter herring, the breeding fish, lying close inshore, of which 50,000 barrels were caught.

It is from these profound and populous depths, where cod, young herring, caplin, and probably lance range, with an innumerable multitude of sub-arctic fishes, and an infinite host of the lower forms of life, all feed directly or indirectly by the unfailing Labrador current, that the full-grown silver-sided salmon rises in the spring to pursue his food along the islands, headlands, promontories and wall-like escarpments of the south coast of Newfoundland. On the east Atlantic coast of the island and the Labrador coast these features are reproduced in various localities on a less grand scale, and in many parts the steep escarpments are replaced by gentle slopes which lead, within from five to fifty miles from the land, to profound depths. That the fish life in these depths on the eastern coast is yearly abundant during the winter season we know from the fact that from time immemorial the seas there have supported, every winter, such a surprising number of harp-seals that an annual average slaughter for half a century of upward of 300,000 of these animals has not produced a very sensible impression on their numbers, although it has changed, by experience of danger, their habit of trimming the shores of the bays. When we consider that the harp-seal feeds largely on fish during the winter months, and that it lives chiefly on crustaceans (shrimps, etc.), we can form an idea of the vast quantities of fish food these animals must consume during the five months they are on the coasts. They bring numberless cod and flatfish on to the ice, and it would be an interesting fact to know the general size of the fish they catch, so that a positive proof might be obtained that the smaller sized cod winter in a shallower zone than the average full-grown fish of forty or fifty pounds in weight.

We are now in a position to consider the movements of salmon in the sea as far as regards the large schools of adult fish which are first taken at the headlands during the earliest visible runs in the spring. The schools come inshore from deep water with and against the rising tide, and begin to feed without any special regard for river estuaries or fresh water, for they strike and coast about small islands and bold promontories stretching far into the ocean and destitute of rivers, just as frequently as they visit the headlands which guard the estuaries. They pursue a course in shallow water parallel to the shore line and against the tide; they go out to sea again just

CHART SHOWING MOVEMENTS OF FEEDING FISH.

as the tide begins to turn, and when in deep water they turn round and swim against the ebb tide. At the turn of the ebb they approach the shore again and pursue their course as before, against the flood, going out to sea at the turn. Their movements, as will presently be shown, are in the form of a series of loops or ellipses along the coast, the straight line connecting these loops being in deep water. Let us take, by way of illustration, the movement of the first schools of salmon in Trinity Bay, on the east coast. Here they are taken in nets on both the north and south sides of the bay, as if going out toward the open sea. If we, in fact, caught moving eastward against the rising tide. At the turn of the tide they pass into deep water, and, veering round, swim against the ebb until the tide begins to rise again; they then approach the shore a second time, but their journey in deep water has brought them further up the bay, and as they coast against the flood, following the indentations of the coast line, they do not repeat nearly so much ground in a straight line as during their direct course in deep water against the ebb. By repeating this movement, and by passing in deep water through double or more of the distance they lose on the coast, they make their way to the head of the bay, which in Trinity is reached about ten days after they strike the headlands at the entrance. In the case of ebb-flood tides on the coast the movements are reversed, as well as when winds alter the direction of the flood. If these movements of the feeding fish be plotted they will form a continuous line parallel to the coast, with loops in it at irregular intervals. The loops represent the movements of the fish toward and on the coast, the straight parts in deep water the progress up the bay or along a coast line. I am persuaded that many fish, not excluding the mackerel and schools of young cod, approach the coast and feed in a similar manner, coming in with the flood and going out to sea with the ebb tide.

The first schools of salmon whose movements in the sea have been described are composed of the largest adult fish, but whether they are all breeding fish or all fish of an off-spawning year, or mixed schools of old adults, can only be determined by further inquiry; but I think that in general it will be found that they include both classes, which separate when they reach the mouths of rivers they desire to ascend. The next schools, which follow a fortnight or three weeks later, are composed of young adult salmon and grise. These appear to pursue the same method of approaching the coast as the large fish, and they make for the estuaries and mouths of rivers, ascending them when not barred by nets, as is unfortunately the case to a large extent in Newfoundland. Before attempting further to describe the movements of salmon in the sea it will be necessary to glance at the spawning process and the hatching of the egg, which may well serve for a future communication.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Birds, Guides, etc.; Name of person to address.

THE OPENING OF THE TROUT SEASON.—The long-looked for 1st of April is now close at hand. On that day begins the spring war on the *Salmo fontinalis* in this State. Anglers, who have been looking fondly at their tackle during the long close season, are now scrutinizing carefully their tools and getting ready for their cherished sport. We have usually, at this season, called the attention of anglers to some facts in regard to the preparation of their tackle, arrangement of casts, etc., and we now follow our custom; not that we would dictate to old anglers (who, sometimes, like the heathen, are "a law unto themselves"), but merely with the desire to give the results of our experience for the benefit "of whom it may concern."

First. The hook should be the "sroat bend," and it should be the very best make of this kind. Be sure your hooks are the very best that can be made. It is the poorest economy to save money here.

Second. The size of the hook should be about two numbers larger than those used later in the season. The trout have not, in localities where the law is enforced, been fished over for some seven months; consequently the prime necessity of small hooks is not present. Of course every one knows that one should use as large a fly for trout as he can without fear of scaring the fish. We do not give the proper numbers of sproats to use, because what would be small for some localities would be large for others. Let us merely say, use two sizes larger than you found most successful at the close of last season.

Third. What flies should be used? We think that, especially at this season of the year, the little jungle cock "shoulders" are a great addition to almost every fly, and a small spray of the crest of the golden pheasant can be mixed with the tail of most flies to great advantage. The following flies (with above additions, if possible) are the best for the opening day: (1) Grizzly King; (2) Imbrie; (3) Light Corduroy; (4) Professor; (5) Abbey; (6) March Brown; (7) Spider; (8) Cooper; (9) Brown Palmer, red body; (10) Grey Palmer, green body; (11) Black Palmer, yellow tail; (12) Scarlet Ibis. Using these flies in making your casts, beginning at the end of the cast nearest your line, we would advise as follows:—

FOR AN OVER-CAST DAY.	FOR A BRIGHT DAY.
Cast No. 1, 12, 1, 2.	Cast No. 1, 6, 7, 11.
Cast No. 2, 10, 4, 3.	Cast No. 2, 2, 3, 7.
Cast No. 3, 9, 3, 5.	Cast No. 3, 9, 3, 11.

The fourth suggestion is this: Be sure to remember that, if the air is very much colder than the water, and particularly if the surface of the water is broken by a cold wind, the trout are much more apt to take the fly just below the surface than on the surface.

We have said nothing about bait fishing. On this point we would only say: Eels and flounders are in season, and the bait fisherman should take a day in Coney Island Creek, or anywhere else than in trout waters.

We hope to receive accounts of the triumphs and reverses of our readers.

WHO WILL TELL HIM?—Our correspondent, "Salmon Roe," is unsatisfied with our view of the character of an alleged John A. Grindle, and insists in imputing to that gentleman the unsavory fame of the dogfish, which is supposed to bear his name. Doubtless, as he avers, "Salmon Roe" is sincere in his quest of information on this point, but he is certainly guilty of a grave offense in his statement. "It is reasonably certain that he was a lawyer," and that he must have lived in Mississippi, Illinois, or possibly in Indiana. Every lawyer (and "Salmon Roe" himself is one) owes it to his profession to prove either that Mr. Grindle was, as Marc Antony said, an honorable man, or else that he did not belong to the bar. And every patriotic sentiment should impel the citizens of Mississippi, Indiana and Illinois to a like consideration of the fair fame of their respective States. Now who will tell us of Mr. John A. Grindle, when and where he lived?

"Salmon Roe" writes from Jacksonport, Arkansas, March 6th:—

In a recent editorial article in your paper you make the mistake of supposing that I inquire who John A. Grindle was, by way of invective against the fish bearing his name. Nothing could be more foreign to my intention. I was in search of information in good faith. Besides, such a feeble way of handling "cuss words" is not an Arkansas failing.

I will give you my conjectures as to Mr. Grindle, and

would thank you to ask the question, who he was, to your numerous correspondents. It is reasonably certain that he was a lawyer, and perhaps a politician also. He must have been a greedy, grasping, unconscionable fellow, and must have lived in Mississippi, or part of Illinois known as Egypt—though there is a part of Indiana where such a man might have lived. I can find no one in this State who knows anything about him. I am almost certain the *Amia calva* was not named after him by way of compliment. Please help me find out who he was. I have seen the full name, John A. Grindle, applied to the fish in print.

SALMON ROE.

A CAMP BED.—*Atlantic City, March 17th.*—Seeing in the last FOREST AND STREAM a piece on camp beds I thought I would tell you of mine, which I have used for six weeks at a time and found very comfortable. It is a double piece of ticking, 7ft. long by 4ft. wide. It has a place for a pole at each side and also at each end. These poles are laid in forked sticks, in the manner you have already described. We fill up under the ticking with hemlock or Florida moss as the case may be. To keep this from scattering all over the tent we make side of board, or if we are without such a useful article we lay poles one on top of the other till they are level with the ticking at the top and bottom, as well as at the sides, so that no hemlock can get out. When we want to make our bed soft we run a stick under the ticking and stir it around, which I am sure is quite a novel way of making beds, but the result is such that I have often wished our hotel chamberlains would copy. I never put hemlock boughs as a top layer, but strip them, thus making a soft and comfortable bed, the beauty of which is you have nothing to carry except a piece of ticking, which folds up in a very small space.

VICTOR.

Port Wayne, Ind., March 15th.—In your issue of March 4th "H. L." of Warsaw, asks for a comfortable camp cot. Allow me to suggest to him and others that the best thing for the purpose is a cork mattress, 6ft. 2in. by 2ft. 6in. They are light; can be rolled up into a very neat package; can be used in any place; are much more convenient and not as heavy as camp cots; cost 60 per cent. less; are warmer, etc. The objection I have to the cots is, the feet sink into the ground, making the cot uneven and breaking it. I have used the bed-cot for years, but have been many a time without anything to fill it. Ham cots cannot be put up in a small place and are unhandy in a large one.

WILLIS D. MAIER.

A FISHING TRIP THROUGH CANADA WILDS.—*Quebec, March 11th.*—I can give you yet another very pleasant trip that can be made at small expense from Toronto and will not take more than say two weeks. Take the Toronto and Nepesing Railroad to Cobocank at the head of Balsam Lake. Here take guides, of whom plenty are easily found in the village at a cost of \$1 per day, or \$1.50 if canoes or skiffs are to be supplied. Then the choice of two routes is open and they are both good. Go north to Mud-turtle Lake, and then Gull River to Gull Lake. Again follow up Gull River after leaving the lake till Lake Boshung is reached. Here is fine fishing and shooting in fall. A portage of about three miles brings one into Lake Kaskaganigamoze, a very large lake with good fishing. If another route is desired go south from Cobocank, through Balsam Lake, then a short river, and so into Canoe Lake, where a short river trip brings you into Sturgeon Lake; then through Pigeon and Buckhorn lakes into Deer and Salmon Trout lakes. In all these lakes the fishing is good; trout, black bass, muskellunge and lunge are plentiful, with good duck and partridge shooting in fall. Deer shooting is also good about the upper lakes after leaving Salmon Trout Lake. Go by rail, or follow the Ottawa River in skiff to Hiawatha village, on Rice's Lake, where a short river trip brings you to Grand Trunk, and so to Toronto and home. When in Boshung Lake it is but a short distance, with comparatively few portages, to Trading Lake. Then down the South Branch of Muskoka River and through Muskoka Lake to Gravenhurst, where the Northern Railway is taken for Toronto.

AU SAUBLE.

NEW BRUNSWICK SALMON RIVERS.

THE three rivers, Miramichi, Nepesiguit and Restigouche, are all reached by the Intercolonial Railway, which runs from St. John, N. B., to Riviere du Loup on the St. Lawrence. If the Restigouche is the objective point I would recommend going via St. John and returning via Quebec to Boston, as the distance from the Restigouche to Boston is the same either way. Route from Boston to St. John by cars: Boston to Portland, 108 miles; Portland to Bangor, 136 miles; Bangor to St. John, 206 miles. One through train weekly from Boston to St. John, via Eastern Railroad at 7 P.M., reaches Portland at 11:30 P.M. and Bangor next morning at 6:10 A.M.; connects there with European and N. A. Railroad, leaving at 7:20 A.M., thus giving one hour and ten minutes for breakfast. Penobscot Exchange Hotel near the station; first-class. Arriving at St. John same day, 6:45 P.M., making 410 miles and 24 hours' time from Boston; fare, Boston to St. John, \$10. Parties preferring can take one of the steamers (International Steamship Co.), which leave twice a week in spring and summer. From Bangor to St. John, 206 miles, fare, \$5.50, exclusive of state-tolls and meals. Wharf, Boston to St. John, Intercolonial Railroad (Northern Division), 8 A.M., arriving at Miramichi, town of Newcastle, 167 miles, about 5 P.M. Hotel, Waverley; situated about quarter of a mile from Miramichi River; but no fishing here. Take a team seven or eight miles up river to Indian town, and go to Frank Jardine's hotel, a small affair, but best here in terms; \$1.50 per day. Fishing here good in the season, from 10th to 20th of June; salmon only, ranging in weight from eight to twenty pounds. Guides not indispensable. Canoes, \$5.00 per day, shore or from canoe.

From Miramichi to Bathurst is 44 miles; Bay View Hotel; no fishing in the immediate vicinity. The Nepesiguit, famous for its salmon, empties here, but it is necessary to take a team up the river; good fishing nine miles up at Tough Waters, and at points along up river to Grand Falls, twenty miles. Fishing may be done from the banks or in canoes. Guides plenty for \$1 per day. Scenery enchanting as you go up the river. Season does not usually commence till June 10th or later, and continues till the summer. Permits necessary; charge usually \$1 per day per rod. Settlement along the banks near Tough Waters. Grand fishing pool at the falls. Camp necessary. Salmon range six to twenty-five pounds.

Nepesiguit to Metapedia station, junction of the Metapedia and

Restigouche rivers, is 76 miles. Hotel Fraser, kept by Daniel Fraser—an excellent house, with accommodations for fifty or seventy-five guests. Mr. F., an intelligent Scotchman, will do everything to make his guests comfortable; terms, \$2 per day. Always get your guides through him, and he will see you are not imposed upon. He loses six miles of the river, and grants permit at \$1 per day per man.

The Restigouche is one of the most famous rivers in New Brunswick, and the salmon run very large, ranging from eight to fifty pounds; thirty, thirty-five and forty pounds are not uncommon catches. The season is about ten days earlier here than at the Miramichi or Nepesiguit, and usually opens from 5th to 10th of June, and keeps up through the summer. The largest fish are the first that run up. Splendid pool within a stone's throw of the hotel. Distance from here to Riviere du Loup, 116 miles; from there to Quebec, 125 miles. Whole distance from Boston to St. John, 460 miles. St. John to Quebec, 558 miles; Quebec to Boston, 460 miles. Total, 1,445 miles.

Round trip tickets from Boston to Restigouche via St. John, and return via Quebec, can be procured for about \$31.

Expenses of fishing at Restigouche per day: Board, \$2; board of two guides, \$2.50; permit, \$1; canoe, 50 cents; two guides per day, \$1.50. Total expenses per day, \$6.50. As the water is very "quick," two guides are indispensable per man. Estimated necessary expenses for two weeks' trip from Boston to Restigouche, \$150. Piece of camp cot, with tent and poles below Metapedia, running from one-half to five pounds in weight.

For particulars address Daniel Fraser, Metapedia Station, N. B.; Waverley Hotel, New Castle, N. B.; J. H. Wilbur, Bay View Hotel, Bathurst, N. B.

GEO. A. FAY.

West Meriden, Conn., March 9th.

HOW WE FOUND AND FISHED THE SOUTH FORK.

ON more than one occasion last summer did we have our curiosity aroused by reports relative to a certain trout stream that lay away back in the tangled woods of Wyoming County, Pa. We overheard one old veteran saying that he knew where he could get a basketful of the speckled beauties when all other sources had failed him; and still another telling of a stream that was filled with snow water ever up to the last of July. These remarks dropped at one time into another, we gathered that it must be a very late stream, running through a deep gorge for almost its entire course, and on whose banks snow could be found almost any time in June.

As near as we were able to ascertain, after diligent inquiry and search of maps, that it was called South Fork, so named on account of the branching or forking of the Mehopeny Creek; that it flowed through the pure wilderness, that no houses were within many miles of it, and that if we fished it we would be compelled to spend a night in the open woods. These difficulties, however, did not frighten my friend H. and myself from our determination to seek out and fish this wonder full stream, so on the 3d of July last, about 3 o'clock in the morning we left home for a few days' trouting. It was a delightful ride, over mountains and across valleys. And indeed, I know of none more pleasant and exhilarating than this same early morning ride of a party bent on a day's fishing. It was about 7 o'clock when we reached Bowman's Creek, perhaps the best trout stream in this part of the State, as many a fisherman with well-filled creel can testify. This creek was situated within two or three years ago, but never a one of them has been heard of since. We cannot stop here, however, although it does not seem natural to pass by this scene of many a good day's sport, and the only one of any pretensions hereabouts. We learn that we are still eleven miles from South Fork and are advised to go five miles further up the creek to the house of Mr. Foote, a noted hunter and guide, and put up there for the first night, and in the meantime we can fish the main stream at that point. Twelve o'clock finds us safely housed at the end of the day's journey and thirty miles from home. After a hearty lunch we rigged up our rods and started to whip the main stream. For myself, I can say that I never fished more diligently in my life, carefully whipping every pool, changing my flies from dark to light and again to a mean between the two, but all to no purpose. We were rewarded with only a paltry half-dozen, and those were small. Thoroughly disgusted we went back to Foote's where we got supper and spent a couple of hours listening to the stories of the host of trout and deer and what he was the best of the great pigeon roost that was in this neighborhood a few years ago.

There were still six miles of dense woods between us and the mouth of South Fork. To reach it we were compelled to drive five miles up to Dutch Mountain. Here we found a man to guide us over the mountain four miles and a half to our destination. On the way over we went a few steps to one side to show us a deer lick that he had constructed some time before, by forcing some rock salt in among the roots of a tree. We can plainly see tracks that have been made the night before, and in crossing the ridge he points out trees that are apparently fresh. We cross the main stream and another branch called Bellows Brook, and here we are at last on South Fork, and it is with mingled feelings of satisfaction and disappointment that we gaze on the almost mythical stream. Before parting with our guide we contracted with him to drive our horse back to Foote's, from which place we were distant eleven miles. In the face of this we were rash enough to start fishing up stream. But what did we care? We had come to this for ourselves the truthfulness of the stories we had heard, and we did not propose to leave any stone unturned. Big catches, big trout, the long and hard road we had come, all tended to work us up to the highest pitch of anticipation.

I prepared to make the first cast while I involuntarily ceased operations to watch him. Calmly he approached a beautiful pool, first making a few rapid casts in the stream below, so as to render his line of the proper length. Gently and deftly he lands the feathered delusions on the further side of the pool, and slowly works them back toward him. But nothing rewards his cast. The line describes a graceful curve behind the back of the anxious fisher of the hoped-for trout. The flies had hardly touched the water before there is a strike, to which H. responds with a quick jerk. It was one of those little beggars that rarely get the fly the first time. The result was, the trout missed the fly and H. missed the trout and succeeded in landing his leader in the top of an adjacent tree, and with disgust depleted on his face he determined to climb. We had no room to complain of our success as far as catching was concerned, but no large ones came to our creek. We were disappointed. Instead of the deep gorge, we found an average Pennsylvania stream, now flowing quietly along some level space and again tumbling with a splash and roar over huge rocks and boulders.

That night we lay down on a moss-covered rock in the clothes that we had been fishing in all afternoon, and between the wading of the stream and a heavy shower that we had during the afternoon they were pretty wet. We managed to start a small fire, but

on account of everything being so wet, and not having an axo, it did not amount to much. We slept probably an hour and a half and spent the rest of the night trying to keep warm by sitting in the hole where the fire had been.

The longest nights come to an end some time and it was with feelings of satisfaction that we hailed the coming of morning. As soon as it was light enough to see we started to our last day's fishing with twelve miles of stream to travel. We met with varying success, but as before could get no large trout. At the junction of South Fork with the main stream the tug of war began. The creek bed is completely filled with huge boulders, and the whole distance must be traveled by stepping from one stone to another, which soon becomes a very tedious operation. Add to this the discolored water, caused by flowing through the tamarack swamps. When one steps into it does not know whether he is going up to his knees or to his neck.

We did not spend much time in casting in the main stream, only now and again when some pool more tempting than its neighbor presented itself. And we soon tired of this, because for the most part our casts were made in vain. Only on one occasion was this monotony varied, when H., standing on a rock in the midst of the whirling current, hooked a lovely beauty. In some unaccountable way he became entangled in his line, but with rare good fortune he succeeded in drawing the trout up on the rock, and then sitting down on him.

Every anxious did we peer around every spur of the mountain and every bend in the creek in hope of seeing a clearing! And it did seem as if the end of that day's tramp would never come; but come it did at last, and with it two of the most tired fishermen that ever cast a fly. Upon calculation we find that we have over 300 trout, varying from six to ten inches in length, and they did look very pretty when laid out in the ice-box side by side.

We left Foote's at 3 o'clock in the afternoon with a thirty-mile drive before us. We stopped for supper at Forkston, and again at Bowman's Creek, reaching P. about 4 o'clock next morning with all our fish in good condition. Taking it all in all, it was a very enjoyable trip, and one which we intend to repeat next summer.

We noticed one peculiar feature of this stream, viz., that not a single minnow was seen in all the time we were on it. And considering that this is a favorite and very successful bait for catching large trout in this part of Pennsylvania, we are both of the opinion that if a party were to go there with a stock of minnows for bait they would catch more large trout in this way than with a fly.

It is also a splendid field for shot gun and ride, there being an abundance of both large and small game, such as squirrels, pheasants, deer and bear. Our guide told us that over eighty deer were shot and taken from there during last season. These woods are distant only nine or ten hours' ride from either New York or Philadelphia, and offer excellent advantages for city sportsmen who cannot spare the time to make more extended excursions in search of sport.

The Kennel.

SOMETHING ABOUT BREAKERS AND DOG BREAKING.

COMBINING THE VIEWS OF COL. HUTCHINSON AND OTHER FAMOUS HANDLERS.

NO. I.

TO insure good sport the shooter must be provided with good dogs. However abundant game may be, there can be no real sport without good dogs; and however scarce game may be, a good day's sport is only attainable with good dogs, and by a person who feels what sport is, and who does not look upon filling the game bag as the sole end and aim of the sportsman's occupation. The mere act of killing game no more constitutes sport than the jingling of rhyme constitutes poetry. Since, then, if you want a first-class dog, break him yourself; if, however, you cannot spare the time, be careful to select a breaker who lives where game is plenty—a man with a good temper and a plentiful store of patience to fall back upon—and of all things avoid a bad shot, for he is quite sure to be either a careless person or an impatient one at times.

It is to be presumed that you have selected a young dog that carries his head well up when beating, and not on that works with his nose to the ground. Though bear in mind, that a pottering dog that "traces" his quarry some distance off, taken in hand when young, by working him on an overgrown snipe meadow, where the birds lie on the high tussocks and rafts of floating reeds. He is then obliged to feel in the air for the scent, and the splashing made by his forelegs obliges him to keep his head well up. This system does away with the old-fashioned mechanical contrivance called the puzzle-leg.

The most killing dog is one that has been trained by a master, for he unconsciously studies his owner's disposition along with the daily rudiments of his education. The Babel of dog language is then unknown to him, as he knows but one voice, one dialect and one code of oral and manual signals. Thus he is never at a loss to comprehend his master's meaning, and unbounded confidence in each other takes the place of perplexity and distrust. It has often been a mystery to us how boyhood dogs really could adapt themselves to a new language so readily. At a moment's notice an entirely new list of orders must be obeyed, and, as is often the case, issued by those unfit to command. Hence we consider it equally as necessary for the handler to be "broken in" as we do the dog, and the number of good dogs that are yearly ruined are the living examples of the truth of this assertion.

This common sense (for there is no secret) in dog breaking is this: Never order your dog to do an impossibility, him obey and stick at it; be consistent even if it takes a week, and do not leave him until you have conquered. You will find by experience that you and he will have one or two grand tussles, but if you but firmly insist and use judgment you will be astonished and gratified at having won a complete victory when least expected. If your master's voice most excellently, and there are old steady fellows that cannot be induced to do wrong even when "hunted" by a raw hand; but if one wishes to see the

perfection of beating and working out the fine points of each shot, let him carry the game bag ten yards in the rear of the owner of one or a brace of dogs over whom the birds are killed to enable the pot to hang to be kept better. In this way the birds will be kept better, and the scattered berry has been reduced to a science. There is no one berry shot, followed by a few random cracks at the birds when they have been marked down, this finishing it; but a well-directed plan, well carried out, that in the end fills the game bag, and shows to perfection the well-trained and cleverly handled dog. For the excellence of the art of shooting is to leave behind you at the end of the day the least number of birds unmoved on your heels.

In the paragraph above we were led inadvertently to make reference to what is generally known as the "pot-hunter." Now, not wishing at the outset of this paper to be misunderstood, we take the liberty of digressing and giving our views on the subject, because we frequently hear in these civilized parts, the so-called "pot-hunter" held up in derision. First of all, our interpretation of the term "pot-hunter" is one who is compelled to shoot for a living; that he either kills game which he has the audacity to devour himself, or he carries it to the nearest market where he there disposes of it. However, in either case the game is utilized, which is more than can be said of the spoils of many a shooting trip, so wantonly left to rot when it has been shot down. It is not necessary that the "pot-hunter" or market-shooter should be a poacher, shoot out of season, or that he should bunch his birds any more than those who decry him. Ninety-nine times out of a hundred it is this very "pot-hunter" who is first sought out by city sportsmen in their outings, to act as guide, philosopher and friend, and we remember on more than one occasion seeing the "pot-hunters" dogs find all the birds. This has led us to consider this appellation of "pot-hunter," a species of cant used by a class of tyros to whom the birds, so to speak, are sour. So if you do not trick yourself, you will, after casting about, probably end in sending your dog to a "pot-hunter" to be broken.

Before thumping through the 315 rules for dog training, given us so thoroughly by Col. Hutchinson, and making reference to other practical writers, it may be well to say that we will have to apologize for some errors and no doubt for many deficiencies in attempting to deal with the subject. Beware of calling your dog by a name similar in sound to words that may be used for command; for example: Don—down; Charm—charge; Joe—toho, etc. To simplify the code of command, the ten following words will be found to cover all that is absolutely necessary:—

- 1st.—The dog's name, to be used at close quarters only, to which he should come.
- 2d.—"On"—to go forward, or to get up.
- 3d.—"Careful"—to take heed.
- 4th.—"Toho"—to stop still.
- 5th.—"Charge"—to crouch on the ground, to drop to hand, at the report of the gun.
- 6th.—"Dead"—to encourage to seek for a dead bird.
- 7th.—"Fetch"—to retrieve the bird.
- 8th.—"Loose"—to drop the retrieved bird in your hand.
- 9th.—"Heel"—to come to heel.
- 10th.—"Ha"—to be used to correct or check any action, such as crossing a fence, etc.

We would advise every one to adopt a whistle peculiar to himself. We for a long time have accustomed our dogs to the three notes of the black-breast plover, using the two first in a low tone, to attract the dog's attention, for him to receive the hand signal—and the sharp, shrill sound of all three, to call him to us. Although whistling is apt to disturb the game, it is an infinitely better call than shouting the name of your dog all over the country. "Penn," in his clever maxims on angling and chess, observes to this effect: "If you wish to see the fish, do not let him see you." And with respect to shooting, we may say: "If you wish birds to hear your gun, do not let them hear your voice."

No dog should be taken in the field until he perfectly understands the meaning of certain words and signs; and in pursuance of the order you ought to give these lessons when you are alone with the dog, and in a place where his attention is unlikely to be attracted by other matters. Give them also when he is fasting, as his faculties will be clearer and he will be more eager to obtain any reward of food. A quarter of an hour's daily house-breaking for four weeks will effect more than months of constant working in the field without preliminary tuition. After an hour or two of house-breaking, sit him down to you; nor at any time while the dog is being educated, to interfere in any way. Call the dog to you by the whistle you propose always using, and attach a check-cord to his collar. Throw him a small piece of meat, saying, "Dead, dead." Repeat this several times, tossing it into different parts of the room, and let him eat what he finds. Then throw a piece, saying, "Dead," and the moment he gets to it, check him by jerking the cord at the same time saying, "Toho," when pressing on the cord with your foot, you can restrain him as long as you please. Do not let him take what you have thrown until you say the word "On," accompanied by a forward movement of the arm. Let all your commands be given in a low voice. After a few trials with the check-cord you will find your self enabled, without touching it, and merely using the word "Toho," to prevent his seizing the meat until you say "On." Should he draw toward the meat before he has obtained leave, jerk the cord and jerk him back to the spot from which he stirred. He is not to quit it until you order him, occupy yourself as you may. At odd times let him take the meat the moment you throw it, that his eagerness to rush forward to seize it may be continued, only to be instantly restrained at your command. To teach him the meaning of the word "On," perpendicularly and call out, "Charge!" when so holding up the hand, and press him down with the other until he assumes a crouching position. Make him lie well down,

his fore legs extended and his head resting between them. Nothing is more slowly than to allow him to sprawl on his side, or should he be of a timid disposition, roll over on his back with his legs in the air. Do not let him raise himself to sitting posture. Walk about him, around him, and after a sufficient time call him to you. Perfect him in charging very thoroughly; practice him at odd times and in your walks, always remembering that your companionship will tend to enlarge the dog's ideas. As dogs are very imitative, a well-broken dog will aid you very materially at an advanced stage in this difficult part of your puppy's training. At very unobtrusive, unexpected times call his eye, having previously stealthily taken hold of the check-cord—which should be a long, light one—and then hold up your hand. If he does not instantly drop, jerk the check-cord violently and drag him back to the exact spot where he should have crouched down. Admit of no compromise; you must have implicit, unhesitating, instant obedience. When you quit him he must not be allowed to crawl an inch after you. If he attempt it, drive a spike into the ground and attach the end of the check-cord to it, allowing the line to be slack; then leave him quickly, and on his running after you he will be brought up with a sudden jerk. So much the better; it will slightly alarm him. If the dog is not of timid disposition a spiked collar can be used to advantage at this period of his education. Take out your whip at should be a stinging one—and let him feel it. You take him back to the precise place he quitted. Do this invariably, though he may have scarcely moved. Then make him again "charge," always observing to jerk the cord at the moment you give the command. After a short time he will be certain to lie down steadily, until you give him the order, "On!" to move. Most probably he will not at first rise when he is desired. There is no harm in that. Go up to him, pat him, repeat the order, "On!" and lead him for some paces, "making much" of him. When he is well confirmed in this important lesson take him on a level, cleared piece of ground, and as practice only makes perfect, continue the instruction, allowing the dog to range about, dragging the check-cord after him.

It is now the proper time to introduce him to the sight and sound of a gun and to the report of which he should be trained to drop, and for the following sufficient reasons:—

If there is any fault to which a dog can become addicted more vile than another it is that of "running in." When once admitted, it heads a list of vices that not only stamp the dog as perfectly worthless to his owner, but it makes him a spoil-sport and nuisance to every one with whom he comes in contact. When this habit is once established it is an extremely difficult one to eradicate, and the dog does not charge at the firing of the gun he will soon begin to "run in" to retrieve his birds without waiting for the proper order. After two or three rough and tumble with a crippled bird he will begin to chase those that are not winged. From this moment all discipline is gone, and unsteadiness and flushing will become the order of the day. The neighborhood will be awakened with shouting and shrieking, the gamut of the whole gamut of the dog's life will be in the air, and the cracking of the dog whip and the grunts and yells of the luckless brute. It is about this time that the "breakers with cold lead" leave in sight, and shortly the air is tainted with the fumes of sulphur and the odor of perspiration and blood.

Almost every reader that has had any experience in the field has been a witness to some similar scene. Has it occurred to you that the dog was not the one in fault, but the handler, on whom all the blame should rest? It is not, be assured, that it is so; and if you are not an impassive person, but one who is apt to speak your mind, direct all remarks on the subject to the animal with the two legs—and may they do him good.

In the days of the muzzle-loader it was very much easier to consistently enforce the dropping to shot than it is now with the breech-loader, the hand of every one being a hand-axe. Thus you as well as the dog, have a lesson to learn, and you should always remember not to move on until you have seen that your dog has charged. For no matter how thoroughly you have him under control at the start, unless you keep him on all occasions up to his duty he will soon deteriorate and drift into bad habits that will be hard to break him of and make him anything but what he should be—a first-class dog. Therefore, break your dog to drop to shot, and the moments that are consumed in keeping him at his charge will be returned by hours and days of pleasant sport. The minute's rest will neither hurt you nor your dog, but tend to steady the nerves of each.

We can well understand that if a dog could be broken to stand perfectly still instead of crouching down he would be much better able to mark his birds, and that in cold weather, in wet places, charging is severe on him. But not one young dog of the right sort out of a thousand can be made to stand immovable, and the difference between lying and standing in water is not so very great after all; the dog in the long run having to suffer more from numberless floggings than he ever would from the cold.

ENTRIES FOR THE DERBY.—New York, March 15th.—I send you additional entries received since your last week's issue, which be kind enough to insert in next:—Drake (Tory-Jaunt), white and liver pointer dog; Trinket (Tory-Jaunt), white and liver pointer bitch; Lena (Tory-Jaunt), white and liver pointer bitch; Melissa (Tory-Jaunt), white and liver pointer dog; Trip (Tory-Jaunt), white and liver pointer dog; Viking (Tory-Jaunt), white and liver pointer dog; Marguerite (Faust-June), white and liver pointer bitch, entered by St. Louis Kennel Club, Chas. H. Turner, Secretary; Cushla (Elcho-Fire-Flay), red Irish setter bitch, entered by Mr. W. C. Harding, Stamford, Conn.; Clyde (Elcho-Gypsy Queen), red, white tipped Irish setter, entered by Mr. Wm. A. McIntosh, New York, Pa.; and Abbridge (Gladstone-Clay), blue Belton setter dog; Dawn (Gladstone-Clay), blue Belton setter bitch, entered by Mr. L. H. Smith, of Stratford, Canada; Sir Alfred (Derg-Kathleen), pure red Irish setter dog; Prince Hal (St. Elmo-Maida), orange and white setter dog, entered by Dr. S. Fleet Speir, Brooklyn, N. Y.; Max (Dash III-Git), white and black setter dog, entered by Mr. A. E. Sterling, Cleveland, Ohio.

CHAS. DE ROSE, Secretary, N. A. K. C.

THED.—E. H. Merdillott's Champion Grace to P. H. Morris's Champion Lark.

Answers to Correspondents.

X. Y. Z., Washington, Pa.—Send us your address.

G. F. B., Boston, Mass.—See note on Druid Lake in last week's issue.

T. S. H.—Write to the Commissioner of Immigration, Lansing, Mich.

COM. P.—Articles on time allowance and measurement will be continued next week.

F. W., Erie.—Concerning importing yachts from Canada, see yachting columns this week.

PIONEER, Florida.—Thanks for your letter on yacht club house for Florida. Will publish shortly.

L. C. W., New York.—You can have your pin fire changed to a central fire by Messrs. Clark & Sneider, of Baltimore.

CONSTANT READER.—See Lyman's advertisement of "How Facing Rowing Gear." It is very useful and practicable.

A. B. C.—Is in a quandary about Salem Bay and would like to know the bearings by compass of the bay the Salem Bay Y. C. derives its title from.

HIGH SPEED, N. Y.—Write to Herreshoff Manufacturing Company, Bristol, R. I., for estimate. Advantages stated in article last week. Read again.

SUBSCRIBER, North Bloomfield, O.—You will find a report of the English gun trial of 1878 in Green's book, "Choko-Boro Guns." 2. Nitric acid and wood pulp.

W. N. S., Columbus, O.—When your 8-gauge gun puts an average of from 100 to 110 pellets of 11oz. No. 7 shot into a 30-inch circle at sixty yards, you may be satisfied with the pattern.

A. W. E.—You send letter for information, but fail to give any post-office address. The party you mention is undoubtedly bad and will soon get his deserts. Government officers are after him.

ENTHUSIAST.—The London Field is not in favor of length measurement. It knows too much to be caught by any such clap-net affair. We will take the matter in hand to your satisfaction.

INQUIRER, N. Y.—The safety appliance for preventing the capsizing of open boat will shortly be advertised in this paper. Sail with fixed ballast by rail means, unless you are practising for a circus clown or a coal heaver.

PROSANO.—Apply the shellac first, then light coat of paint and varnish. Or omit the paint, which will make the canoe lighter. Wet the canvas when you stretch it over the frame, so that it will shrink on without wrinkles.

Q., Long Prairie, Minn.—My rubber boots have been punctured by a nail, and as they are yet new I wish to know if there is not a way to stop the leak effectually. Ans. Send to the rubber stores for rubber cement. See addresses in our advertising pages.

M. N., Grand Rapids, Mich.—I have a gun, the stock of which is too straight for me. Can you give me the name of some reputable person or firm by whom I can have the stock bent, so as to remedy the defect. Ans. H. C. Squires, No. 2 Courtland street, New York.

W. C. S., Brookline, Mass.—I find that grass lines (like sample I inclose) are very kinky. Can that fault be remedied? Ans. All these lines have the same fault. You can only partially remedy it by putting your line full length in the water, and when reeling in taking good care to wind straight.

BROOKLYN.—The Brooklyn Y. C. is not as yet represented in the N. Y. A. The person claiming to represent that club and who had himself made Chairman of the preliminary committee is an impostor. He has been ousted from the N. Y. A. at the instigation of this journal. Have no dealings with him.

READER, New York City.—1. The largest size of shot used in choke-bore without chambering is No. 1. 2. Dr. Henshall, of Cynthia, Ky., is preparing a book on the black bass, and this will probably be what you wish. 3. You will find excellent black bass fishing at Oswego, N. Y. See late files of this paper.

D. L., New York.—Your \$15 gun is a fair and safe weapon. The name on the lock-plates is not that of the maker, the latter being as mentioned by you, the Barrele of Connecticut steel are made of steel and iron screws welded together. The barrels of your gun are made of different kinds of iron without the steel. The charge of 80rs. is safe.

C. M. S.—Bushton builds ten canoes to every one of Everson. Would advise a modification of the "Shadow." See back files for canoe building. Will give further directions shortly if possible. Or get Baden-Powell's book, "Canoe Cruise in the Baltic," which contains much information, from Williams & Co., 283 Washington street, Boston.

W. P. C., Hinghamton, N. Y.—The fish-hooks sent for our inspection reflect credit upon the ingenuity of the maker, but as fish-hooks go, we should not advise your friend to undertake their extensive manufacture with high anticipations of the mercantile side of the venture. The best made hooks of the day are the result of a great many years' experience and a large outlay of capital.

J. J. B., Ontario, Can.—Last fall while shooting in Western Ontario I killed a fine specimen of a bird; it had a beautiful red-crest or top-not, a white ring around its neck, and white tips on the wings; the rest of the bird was very black. It was no doubt of the woodpecker species, as it made the woods ring with its bill and chattering noise. Now was it the bird described by Mr. Venor, of Montreal, in last week's issue, pileated woodpecker, *Hyphantornis pileatus*, or was it the *Picus borealis*? The subscribers called it the "Cook of the woods." Venor calls it "wood-cook." Who is right? I never saw but one before; they are very rare specimens in this part of Canada. Ans. You say nothing about the size of the bird, a very important point. It certainly was not *Picus borealis*, and probably was the pileated woodpecker, *Hyphantornis pileatus*.

SUBSCRIBER, Muncey, Pa.—1. Is there a hammerless gun now made over which the shooter has as good control of hammers, *i. e.*, in raising and lowering them at pleasure, as our old guns with hammers? 2. In any of these guns, when loaded and cocked, may the hammers be lowered in any other way than to the cock position? 3. Would not the inventor of a hammerless gun that could be loaded or broken down into position for loading without cocking by so doing, and one whose hammers could be raised and lowered at pleasure, have a good thing? Ans. 1. The shooter has practically the same control of hammers as in the ordinary gun. When opened for the insertion of shells the gun may be cocked again, uncocked by simply holding back the trigger. 2. The hammerless gun, when loaded and cocked, may be unloaded by opening and closing, without the triggers are held back. 3. We could not decide without examining and comparing the two actions. The present hammerless is of about as simple and rapid manipulation as could be wished for.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted. No advertisement or business notice of an immoral character will be received on any terms.

No publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 18, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions. Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mailservice if money remitted to us is lost.

Trade supplied by American News Company.

REMOVAL.

ON or before May 1st, the FOREST AND STREAM will remove to the new office, now being specially fitted up for its reception, in the New York Times building, Nos. 39 and 41 Park Row.

This change of quarters is one of imperative necessity. When we moved into our present office, in the spring of 1877, they were thought to be all that we should need for years to come. But since then our staff has been largely increased, our clerical force has doubled, our mailing facilities have become insufficient, other things have advanced and enlarged in proportion, and to-day Fulton street is too narrow for us. We must have room to expand. To frankly confess the truth, too, we have long wearied of the unceasing stream of humanity and traffic, that with rumble and roar and jar never-ending rolls on beneath us; and we are disgusted with the forest of telegraph poles which have grown up before our windows. Possibly, as the poets say—and it is a very pretty thought—the wires are instinct with living messages of life and weal and woe; but the poles themselves are sorry specimens, and we shall be glad to exchange them for the trees of the City Hall Park, and the birds (i. e., English sparrows). One other environment here in Fulton street has sadly annoyed us. That is the varnish sign across the street, which for three years has formed the limit of our horizon; this, too, we shall exchange for an outlook over the Jersey hills, and to the sunset beyond.

In short, we are moving into much more spacious, central and convenient offices, where we shall have room to surround ourselves with all the appurtenances of the craft, specimens of American game, mementoes of camp life and other things congenial to our tastes. And there, in the future, as here, in times past, we shall welcome our friends, old and new, and from Park Row the FOREST AND STREAM, let us trust, may go forth as full of good things as are the volumes which have marked its growth while in Fulton street.

—Mr. Edmond Redmond, of Rochester, N. Y., a correspondent of FOREST AND STREAM, and the inventor of the diving decoy and explosive target ball, in 1877 invented and projected the ship railroad for the Isthmus of Darien, which engineers now say is superior to a canal for the purpose of transporting vessels between the oceans.

—We must again urge secretaries of clubs to send us their reports as early as practicable after club meetings.

NOTES.—His name was Gosling. He boasted that he was the greatest walker that had ever been known, and that he was going to bring the champion belt back from England by an original system of pedestrianism invented by himself. This brilliant plan was to take a deep breath and then by the application of bandages to keep this air stored up in his lungs for a week. It was a grand conception. Its realization promised to revolutionize the world. But they decided that the inventor was affected with the form of insanity known as the "general paralysis of the insane." So the belt will stay in England, and the life of man will still be three-score years and ten.

Some months ago we published an account of an alleged extraordinary slaughter of caribou in New Brunswick, and in commenting upon it we took occasion to note that few perpetrators of such butchery were moved to detail their exploits in print. The "Sanguinary Deer Hunt," on another page, is as decided a contrast to this as could well be imagined. It must not be inferred, however, that because upon this particular occasion the writer of the sketch did not (or says he did not) bag any game he is therefore no hunter. The fact is that many a deer has fallen to his rifle, and now he can well afford to convert the tragedy of Hamlet into a comedy, with Hamlet left out.

Indeed to fully appreciate the humor of such an experience as this, one must have passed beyond the stage of the novice, who is eager to kill for the sake of making his record. It is the veteran who really comprehends the ludicrous incidents of the battle-field, and the scholar or specialist of established repute who is not afraid of practical jokes. Here is a case in point, told by the celebrated English naturalist, Rev. J. G. Wood:—

There is a calm, broken and battered, on the summit of the hills near the Vale of White Horse, and visible from the railway. A very well-known author refers in a very well-known book to that cairn as a Danish monument, whereas, I doubt it may ever be by the same token, there is in the middle of it a flag-stone without a handle. Jokes of this kind are very prevalent among scientific men. There is, for example, one of our best entomologists who prides himself on his skill in manufacturing insects. If they have wings, he discharges the color by chemical means, and paints them afresh. He substitutes various parts of various beings for those of the creature which he manufactures, cutting out from an old champagne cork anything that may be found wanting. He once tried to palm off on me a most ingenious combination. The head was made of cork, the wings were real wings, only turned the wrong side upward, and the body had been taken to pieces, painted and varnished. Unfortunately for himself, this very clever forger of entomological rarities had visited one of those houses where the celebrated cardinal spider lives, and had added the legs of a spider from Hampton Court to the body, wings and antennae of insects from all parts of the world. The spider's legs betrayed him, but the author of the entomological forgery was not in the least disconcerted at the discovery of the fraud. There are no school-boys who enjoy a joke half as much as your educated scientific and literary men. Their reputation is too safe for cavil, and when they get together they are as playful as so many kittens. The museum of the late Charles Waterton was full of zoological jokes.

It is among the most experienced and capable sportsmen, too, that we must look for advanced sentiments in sporting ethics. The men who study wood lore most thoroughly and intelligently, and who become familiar with the secrets of the forest and stream, are those from whom we most often hear protests against unmanly and unsportsmanlike conduct. Among those who have so courteously offered us their experience in the different methods of deer-hunting is Mr. T. S. Van Dyke, of San Diego, Cal., whose note accompanying his letter admirably illustrates what we have just said. He writes:—

I take pleasure in answering your questions about deer hunting, though I am doubtful if I can help the cause much, so long as the idea prevails, and is helped along by sporting writers, that the primary use of game is to eat; that one of the greatest boons vouchsafed to man is to get his tooth into a haunch of venison; and that the market's value in respect is inviolable. However, I am about twenty-five years ahead of the time in my views, so I will not bother you much with them.

Mr. Walter M. Brackett, of Boston, is best known to American anglers as the author of the famous four salmon pictures, so often referred to in these columns. It must not be thought, however, from the frequent mention of these masterpieces of fish-painting, that Mr. Brackett has never done anything else. A true artist is rarely satisfied to rest on his laurels. The notice of Mr. Brackett's contribution to the Berlin Fishery Exhibition, which we made from a brief newspaper mention last week, did that gentleman injustice in stating that he was to send to Germany one of this series of salmon pictures. The painting which he furnishes to Prof. Baird will be a new work, upon which the artist is just now putting the finishing touches, and is said by those who have seen it to reflect great credit upon this branch of American art.

Virtue is alleged to be its own reward, and it often happens, in the realm of canine morals at least, that the practice thereof is attended with no more substantial compensation. It will be remembered that Mr. Richard Moncreu Conway, of Spotsylvania County, Va., some weeks ago advertised in the FOREST AND STREAM a lost dog which had come into his keeping. And now, after thus seeking to restore the animal to its rightful owner, he writes: "Some one has stolen the cocker—the only dog I ever lost in that way."

Philadelphia is excited over the birth in that city of a baby elephant. The mother is "Hebe," the great black Asiatic elephant of the London Circus.

Modern science maps out the floor of the ocean with the same exactness as the plains of the continents; determines the altitude of mountain ranges on land and in the sea alike, and follows the movements of the inhabitants of the deep as intelligently as those of the beasts of the field. Few persons, outside of the circle of workers who are actually engaged in the work, realize the wonderful perfection to which the methods of this branch of scientific investigation have been brought, and the importance of the results attained. Professor Hind's paper on "The Movements of Salmon in the Sea" illustrates the progress in this department of knowledge, and is, moreover, a most valuable addition to the series of important papers contributed by the author to this subject.

WILD RICE FOR THE RANGELEYS.—Mr. J. A. L. Whittier, noticing in FOREST AND STREAM an advertisement and editorial notice as to wild rice to be had from Charles Gilchrist, of Port Hope, Ont., has purchased from him the balance of his present supply, and purposes to plant it in the shallow waters around the head of Lake Molle-chunkamunk, one of the Rangeley Lakes, as soon as the ice goes out this spring, in the hope that hereafter visitors to the lakes (and especially those visiting Birch Lodge, Mr. Whittier's fishing camp) may enjoy good duck shooting. FOREST AND STREAM will be kept informed as to the result of the experiment, which no doubt will be watched with interest. All the Rangeley Lakes now need, as good shooting as there is good fishing.

AMERICA AT BERLIN.—The following appointments have been made for the representation of America at the Berlin Fishery Exhibition next month: Prof. G. Brown Goode, deputy commissioner in charge; Mr. Fred Mather, department of fish culture; Mr. F. W. True, care of the exhibits; Mr. Julius E. Rockwell, secretary; Mr. Joseph Palmer, taxidermist in charge of casts; Capt. Joseph W. Collins, in charge of fishing apparatus. The experts are charged not only with the exhibits in their own departments, but also to investigate and report upon all European methods of gathering statistics of fish culture and fishing. The party sail on the 20th inst. in the North German Lloyd steamer *Neckar* from Hoboken. We shall be in receipt of letters from our special correspondent, and have made arrangements for securing the fullest and best reports of the Exhibition.

OUR ALASKA LETTER.

THE KURO-SIWO — THE AURORA-BOREALIS — SOMETHING ABOUT THE PEOPLE—ONITHOLOGY.

SITKA, Jan. 18th.

STEAMER day, the great and about the only event which interrupts the monotony of our life here, has come and gone; but although the mast-head has been manned by as eager lookouts as ever watched for the black smoke on the horizon of a blockade-runner, their watch has been in vain. She has failed to connect, and what is worse, we hardly hope for her to-morrow, and perhaps another week may pass leaving us newsless and letterless; for if the stormy weather and the blinding snow-storms, which have for a week buried Sitka and kept the sky obscured, have extended to the southward, she has had no weather that would justify her risking the trip through the devious and tortuous passages between Portland and Sitka. And if running, it has been at slow speed.

This has proved a blank month for fishing or hunting, and except the occasional bagging of a pintail (*Anas caudata*), or a "long-tailed duck," and an occasional "saw-bill" by a lucky rifle shot over the stern, the game resources of Alaska have not been diminished by me. Coues' description of the "long-tailed duck" is perfectly that of the duck which is most common here now; they come in small flocks and are very shy. The Indians bring in a few mallard, buffleheads, or butter-balls, all of which are very good, especially the mallard.

Plenty of venison and some few ptarmigan are brought in daily, but the deer are getting poor and the rutting season has begun. My fishing has been confined to attacks on a case of Cutting's canned salmon, which is good; a box of Alaska herrings packed in Portland, which are not good, and one of "boneless codfish," which my Cape Ann experience teaches me to accost as "pollock." If we have been deprived of other resources, we have had plenty of climate to furnish us with something to think about. I think we are prepared to out-brag a Californian, even if a Forty-niner. For seventeen days the thermometer has been below freezing; so low down, in fact, that to-day with it up to 31 deg. we feel as though it were rather warm. It did touch minus 7 deg., and it didn't touch plus 24 deg. during the period.

Having nothing else to hunt, I attacked the kuro-siwo—(please don't let your type-setter get that word "kunsu," as he did in a previous letter)—and have succeeded in obtaining some valuable data about it, all of which is duly reported. I will only lumber your columns with the fact gained, that with a range of variation of air

temperature of 57 deg. the temperature of this Japanese gulf stream varies less than 8 deg. With air at 50 deg., the water was 48 deg.; with air at minus 7 deg., the water was plus 40.5 deg.

And the extreme cold weather rendered visible to us—and a beautiful vision it was too—the map of vapor which constantly arising from this body of warm water causes the excessive humidity of the climate of Alaska. It whirled and danced in the wind and assumed all sorts of fantastic shapes, resembling smoke, or dry steam, more than it did fog. Bits of it would get caught by a gust of wind and go whirling and dancing and shaping itself into mist rings.

At ten feet from the surface it became invisible at the lowest temperature, and at plus 14 deg. it ceased to be visible at all. The warming effect of this river of warm water upon adjacent shores was made manifest to us by a comparison of the records of two thermometers—one on board ship, in the midst of it, and one well back from the beach, ashore. At all times the record on board was the higher by 1 deg. to 3 deg.; and this difference was greatest in the day time, with a bright sunshine.

We had, too, another sensation in the way of a natural phenomena granted us, which, if we had not come to Sitka, we might have passed our lives without seeing and enjoying, viz., an aurora borealis, which came up to the most vivid description that I have ever read. It occurred on the morning of the 17th inst., and although I had left a masquerade ball because I was sleepy, at 1 A.M., I felt fully repaid for sitting up till after 3 A.M. to watch it. I will essay a description, but I know I'll fail.

A dense black bank, reaching to, perhaps, half their height, above the chain of high hills which, from north-west around by north to northeast, form our horizon, made for them a gloomy background, against which the peaks, crowned with perpetual snow, stood out in bold relief. This bank was surmounted by a curtain of white, reaching some ten or fifteen degrees further toward the north star. Away back behind this curtain—perhaps at the Pole itself—skillful operators were giving with a camera of immense power an exhibition of *phantasmagoria* (I use the Spanish word, for I know of no English one that conveys to me the impression), so grand that it was well worth the price of admission, even if the latter were a winter in Sitka.

I call the upper bank a curtain, for such it seemed, and white, because no other shade would have permitted the slightest changes in hue of these celestial fireworks to have plainly shown themselves. In reality this curtain was for two hours seldom white for more than a few moments, for nearly constantly its hue was changing from a pale green tinged with pink to a deep rosy flush, and its shape, too, varied. At times its contour would be undulative like waves, and these undulations would pass from west to east, and disappear, and at others it would show a sharp, distinctly-drawn arch, as perfect as ever seen in a rainbow. These colors would brighten and fade, as though these various hued fires were advanced and drawn back. As well as a little thing can represent a great one, the varying intensity of glow of a captured firefly is typical of these changes.

Occasionally the whole curtain would tremble, then suddenly a broad band of brighter glow would shoot up into the sky, and reach above its upper edge; this would be quickly followed by another, and soon the curtain was traversed by many bars of elongating and shrinking light. For a space they would mark time, and then go dancing off to the eastward; new ones, or the same old ones, coming back around the curtain, as in a theatrical procession, would appear at the western extreme, and follow their leaders.

At times the black bank would draw up into a peak in one place, and from its summit a jet of light would suddenly dart upward, and I could make no mistake in judging that the exhibitor was depicting a volcano in eruption. Toward 3 A.M. the exhibition drew to a close, a dense bank which had been arising from the southward invaded the region of the Aurora, the temperature rose, and the hygrometer showed the approach of rain, and to-day we have it, the first in nearly a month; a steady, constant pour down, alternated with intervals of snow, the flakes of which, larger than geese feathers, melt as they fall. Our cold snap is over, the weather has changed, and whether there is a connection between this marked change and the aurora, or simply a coincidence, I'll leave to more learned meteorologists than I am to establish.

Jan. 23d.—No steamer yet, and you who get from day to day your mails can very little appreciate the length of the five days that we have been expecting her. And yet we cannot wonder that she has not come. She is commanded by a weatherwise old seaman, and has for pilot another, and neither of them, certainly not both, would have exposed her and her people to the dangers that would have attended an attempt to get to Sitka during the last five days. It has rained and hailed and snowed and squaled steadily, and the surf comes rolling in over the low islands in a way that makes us congratulate ourselves that we are snugly moored instead of outside "catching it."

I don't want any more "phantasmagorias" to come anywhere near steamer day; they are all very well to

taper off with after a "balle", but, like some other very early morning dissipations, the after effect is not pleasant. It has struck me this evening that there is probably among your readers—in fact I know there is—those who would relish a little information gathered upon the spot in regard to the manners and customs of the new lot of United States citizens to whom by our treaty with Russia we fell heir. Minerva-like, in this respect and no other, these people came full grown into this new world, but, unlike her, they brought with them their recollections and habits of the one in which they had previously lived.

In 1868 the United States became the proprietor of this country and of its people, and became enabled to boast with the English that the sun never sets on her possessions, which ought to count for something in reckoning up the profit and loss of the invested seven millions.

The people here, some three hundred in number, hardly as yet realize that they are citizens of the United States, and an attempt to impress upon the more intelligent ones among them that such is the case is met with either indifference or resentment. "No, I am not," said a lady to me when I tried to convince her that we were fellow-citizens, "I am always a Russian." "Why?" Asked. "What has the United States given us for that which they sent away?" After considerable reflection, and nearly giving up the conundrum, a happy thought struck me and I answered, "the *Jamestown*." I could not have done better. Her frown relaxed, and a pensive expression took its place. Memories of those happy days when her father, a Russian gentleman; her uncle, a Russian General, and their associates, made of Sitka a paradise for those who, of Russian descent, had never left this, their native land, mingled with fresher memories of the "bailes" at the castle, the strolls to Indian River, the boating trips to the island, and the hops on board, and I took advantage of the moment and changed the topic.

We have here, as I have said, a community of about 300 people, the males of which have never voted, and don't know or care who is, was, or is going to be, President, and not one of whom has an atom of patriotism or pride in being a member of the great Republic. They are purely Russian in their thoughts, tastes, habits and religion; and yet the Russian element is not very strong among them. The old saying that "Skin a Russian and you find a Tartar," should be modified to fit Sitka. Here, under a Russian surface, lies a native American foundation, for nearly all of these people are of mingled Russian and Aleutian blood. As a class they are worthy people, but almost entirely devoid of energy, and so accustomed to poverty that they hardly think it worth while to undergo any fatigue to better their condition. There are among them those who are striking exceptions, but they are few. They are not to be blamed for this apathy. Neither Russians or Aleutians are characterized by the go-ahead proclivities of the Anglo-Saxon, and their descendants, the Creoles, cannot be expected to develop traits not transmitted to them.

These people are very religious. The orthodox Greek Church has more power over them than the Government would ever attain were resistance among their peculiarities. In every house there hangs in the corner of the best room—and, I am told, in every bedroom also—a frame in which, surrounded by gilt and silver ornaments, is enshrined the image or picture generally of the Virgin Mary, in some of Saints. These people have been accused of idolatry, because of the reverence in which they hold these shrines, which are called *obrazes*.

I am convinced that the charge is erroneous. The image in this shrine is to them simply a symbol, and held in the same respect as is the crucifix by Roman Catholics, and the Bible by old-fashioned orthodox Christians. The forms and ceremonies of worship in the Greek Church are elaborate; in the standing congregation every lip is moving with the prayers constantly, many hands employed in crossing, and some knees bent in genuflection, which are carried to an extent equaled only by the *kouton* of the Chinese. During the entire service a chant is rendered by an invisible choir, and the whole effect would be to sustain and increase reverence if once it were acquired.

They are much given to little tea parties, at which the singular and not very pleasant custom prevails for ladies and gentlemen to occupy separate rooms during the repast. This may be due to the fact that with the men cigarettes form an alternative with each course, and the women here have not initiated the women of Russia in acquiring this habit. Tea is served to the women in cups, to the men in tumblers, and the repast is almost altogether composed of sweet things, such as preserves, tarts and cake. It is possibly owing to their great consumption of sugar, or it may be to some blood defect, that a good set of teeth is a rarity. Some have a habit, in sweetening the tea, of holding between the teeth a lump of sugar and sucking the tea through it.

Milk is an almost unknown article of food—with them weaning means something. Tea is served by means of a *samovar*, which is a brass or copper urn, in which, by means of a charcoal fire, water sufficient for many cups is kept boiling. They are exceedingly fond of dancing, and many of them are natural musicians, the concertina or accordion being the favorite instrument. During the

Christmas holidays a continuous series of masquerades prevailed, and several very pleasant mask balls were given.

In entering one of the houses the article of furniture which attracts the attention of a stranger is the stove. This standing generally in a corner, consists of a cylinder of sheet-iron lined with fire-bricks; it is from two to three feet in diameter, and reaches from floor to ceiling, to which it has the appearance of a supporting pillar. In using this stove, wood is piled in through a door a foot square near the base, and a brisk fire kept up for an hour or two, then allowed to die out; and when the gas and smoke have entirely disappeared a damper in the upper part is closed, and the stove becomes a radiator of warm air for twelve or fourteen hours, with no further attendance; the danger of shutting down and throwing gas into the room—coal gas—necessitates care in the management of these stoves.

There are among these families some of nearly pure Russian blood who have received the advantages of education, and by their culture, refinement and other estimable qualities afford to those of us who have established a school here great encouragement as to the probable future results. The material is good, it wants only the polishing.

Jan. 25th.—The steamer is just in, nearly a week over time, having been detained by bad weather, and it is only through protest that her Captain is prevailed upon to give us till to-morrow morning to get up our mails. So I must drop some other things and save this letter by winding it up.

The comparatively mild weather during the week has started the ducks in, and I have obtained and identified by means of Coes' Key as follows: Old-wife, male and female; harlequin, do., surf duck, black scoter, mallard and "Golden Eyes." The descriptions are nearly all perfect; but in two cases I think that I can add a bit: My scoter has a membranous patch reaching nearly to nostril or culmen and sides of bill, and the tertiary feathers are tipped with white. And in my old-wife, the outer vanes of all of the tail feathers have more or less black, bordered and terminated with white, and the inner vanes white, and beside the two long tail feathers in center, there are two others about half their length, all four being black. As I learn to use this Key I appreciate its value, and shall devote myself to supplying any errors of omission I may detect, which may be due to variations not as yet observed.

PISCO.

GAME PROTECTION.

PENNSYLVANIA MIGRATORY QUAIL.—*Towanda, Pa., March 12th.*—I notice occasionally in your columns items in regard to the migratory quail, and should be glad to hear more of this experiment, and thinking that there are others probably similarly interested I am prompted to state what I know in regard to the one hundred that the Rod and Gun Club of this place procured and released in this vicinity. They came to us in fine condition, and were (I can say from personal knowledge) freed in favorable localities. Since then I have heard from reliable sources of four different broods of them being hatched, ranging from twelve to eighteen each. They disappeared as the cold weather set in last season, and I do not think they were but a few of one covey of them killed, and that was, of course, not done by any of our sportsmen. From our limited experience we should incline to think the introduction of them a success, which will be confirmed if they only return to their summer residences the coming season. JOT.

TAKING GUNS.—*Brooklyn, March 15th.*—*Editor Forest and Stream.*—It is with real pleasure that I read the different arguments, pro and con, on my proposition to tax the shot gun; but I must admit so far none of said arguments are very strong, or even tenable. A sportsman's heart, everybody knows, is very large, and such is, I think, the case with my friend and fellow-townsmen, Harry Woodcock. The idea of a tax on the gun, not being able to pay a yearly tax of three dollars is certainly very bad, but I think with a little ingenuity and self-sacrifice it can easily be overcome. We have at the present an Irish famine relief fund, a policemen's fund, and why should we not have an old sportsmen's relief fund? Let the broken down sportsmen be divided into two classes, the junior and the senior class. The junior class would include all of them, say under the age of forty, while the senior class would include all above forty. Let there be raised, through your paper, all over the country, voluntary subscriptions. Mine will be five dollars to start with. These subscriptions will be known as the "Old Sportsmen's Relief Fund." Each member of the senior class will be entitled to a yearly amount out of said fund, provided that said member can prove that he has been all his life a good and true sportsman, that he has never been a market shooter or a po-hunter, and that he has never spent any money foolishly at pigeon shooting. Unfortunately I cannot, at the present, suggest anything for the junior class; still I might give them a little advice. Should they be married men, for their wife's and children's sake I should tell them, sell your guns and give up shooting. Should they, on the contrary, be single men, for their boarding-house keeper's sake I should tell them, do the same thing. As long as we are after devising some means for the protection of game, let us by all means devise some ways for the protection of the poor sportsmen, but in the meantime do not let our sentimentalism run away with our object in view.

A TRUE LOVER OF THE SPORT.

N. B.—In your last issue I notice that a party of gunners started at Bay Ridge some twenty-five woodcock. May I, through your paper, ask of those gunners one or two pertinent questions? What business did said party of gunners have at Bay Ridge this season of the year? and how many of those twenty-five woodcock did they kill?

I am told that the following evening a prominent politician of Brooklyn had woodcock for his supper, furnished by some gunner. Whether said gunner was of said party I am not positive. Would it not be well for our shooting clubs to employ a detective to watch a little those Bay Ridge gunners?

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FOWL.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl. "Bay birds" generally, including various species of plovers, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Littoralis* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its season; Fish and its season; Boats, Guides, etc.; Name of person to address.

LONG ISLAND DUCK-SHOOTING.—We add to our reports, published last week, the following note from Pond Quogue, L. I., sent by Mr. M. Williams, of the Bay View House:—

It promises to be very good shooting this spring, as there are more ducks in the bay now than there have been for some years past; more redheads than broadbills. Brant and geese are coming into the bay now by the thousand. I never saw redheads so fine as they are this spring. Sportsmen who would enjoy a few days good shooting should improve the opportunity now. L. J.

MONTREAL GUN CLUB.—At a meeting of the above club held Tuesday, 2d inst., the following were elected officers for the ensuing year:—President, Col. F. Bond; 1st Vice-President, F. X. Archambault; 2d Vice-President, Peter McKenzie; Secretary and Treasurer, A. G. Rudolf; Committee, C. J. Allway, V. S., P. E. Normandeau, R. A. Allan, and officers of the club; Captain, Robert Blackwood.

NEW JERSEY SNIPES.—Lake View, N. J., March 11th.—I killed a Wilson's snipe here last Saturday, March 6th. Killed a pair of teal duck on the lake the day before.

BEN PHILLIPS.

SOUTH SIDE AMATEUR GUN CLUB.—Pittsburgh, S. S., March 10th.—The South Side Amateur Gun Club, of Pittsburgh, S. S., organized on Feb. 8th, 1880, with President, Hy. Smalley; Vice-President, Joseph Kitz; Treasurer, Chas. Gaul; Secretary, F. J. Heinz; Executive Committee, Wm. Thomas and Otto Heinze. F. J. H.

SOUTH CAROLINA.—Chester, S. C., March 6th.—I never saw quail so plenty as here. One can go a mile from the town and start from one to two hundred in an afternoon. Myself and friend bagged forty-seven. We usually get from twenty to thirty in an afternoon. C. C. M.

WILD PIGEONS.—North Vernon, Ind., March 13th.—Pigeons have been flying over this country for several months in great numbers. They roost in Scott County, thirty-five miles from this place, and have roosted there nearly every year for seventy-five years. The birds fly in the mornings, feeding in the eastern part of the State and Ohio, and return in the evenings. Have seen none for a week past; but they will likely fly for some weeks yet. Have heard of only one trapper, a Mr. Fisher, who set his traps near Dupont, in Jefferson County. Do not think he has been successful. Quail season is from 1st of November till 1st of January. Not much shooting was done last season, as the season before many birds were frozen or starved to death. We look for good sport next season, as the birds increase so rapidly, and they have had no hardships to encounter this winter. We have only a few ducks on our creeks and ponds, and only an occasional one is killed. Fishing is fair in the season; bass of several kinds, carp, and a few other kinds of good fish, are caught in Muscatuck, Big, Sand and Graham creeks. No fly-fishing. Largest green bass (fish) from 3 to 4 lbs. W. G. M.

SUMMER WOODCOCK SHOOTING.—New York, March 9th.—It strikes me that "Fair Play" is leading his pen in a very loose way. The pleasure of fall shooting does not consist alone in the mere act of killing a bird. The soul of a true sportsman is also keenly alive to the beauties of nature, and a few hours shooting on a lovely day in October or November is better than a week in the usual cold and dreary weather of December.

But where is the objection to a special law for woodcock? I went to Morrisdown a few seasons ago to shoot partridges, and up to that time—Nov. 1st—woodcock had been "numerosous," but from that time scarcely a woodcock could be found in that vicinity. I admit that in some seasons they stay later; but as October is the woodcock month, and as he is the true sportsman's bird of America, let us have our chance at him while his surely here. And let me add that if summer shooting is not prohibited we will soon find woodcock a scarce commodity. Any true sportsman would rather stop one bird flying whistler in the fall than half a dozen in July when they get up with the spirit of youthful owls and give the "shooter" time to wipe the perspiration from his eyes before they're out of reach. A young lady once told me that a July woodcock reminded her of a new-born baby, and she despaired them. (A pair of trousers would have made her a sportsman.)

DUDMAY.

LIVE QUAIL.—Gardenton, Texas, March 9th.—I notice your demand for live quail. Although quail are now being furnished from this point, the season for pairing-off being now at hand, a little information for those who wish to provide them the ensuing season may not be out of place. Some 10,000 live quail were received here the past season, the shipments commencing about Nov. 1st. The greater part of the birds come from Mexico, Kosse and Corsicana, though every little railroad station furnishes from one coop upward. When not too much crowded they generally reach here in good order, and sell from \$1

to \$1.50 per dozen. They could be sent to New York by the Atlantic line of steamships; one leaves every week; oftener during the busy season. Major J. H. Grayson receives a large portion of the birds, is a reliable person, and will treat all fairly who may wish to deal with him. Mr. C. C. Pettit, the President of the gun club here, will, I feel sure, assist sportsmen to get birds. As to whether these wild birds will stand the trip by sea to New York, or whether once there they will do well in that climate, I am not able to say. CARONKAWAY.

WHERE TO GO NEXT WINTER.—Philadelphia, March 6th.—I noticed in one of your February numbers an article from a correspondent calling attention of "lovers of sport" to the fact that Col. Allen, of Ocoee, Fla., had recently launched a steamboat on Lake Topopelaliga, in Florida, to ply between that point and Lake Okechobee via the Kissimmee River (400 miles). As that section of country is practically uninhabited and virtually *terra incognita* to our sportsmen, and having spent the winter in Florida, and having heard so much of that almost unknown region teeming with game, and supposing that some of your many readers would like to know the great inducements it offers, I take the liberty of giving an extract from a letter from Col. Allen under this date:—

I was struck with Col. Allen's idea of opening up that country to the tourist, and more particularly the gunner, for the sparseness of its inhabitants renders it a wonderful place for game of all kinds. Col. Allen writes that parties coming up the St. John's have the advantage of some eight or ten daily steamers, and that by landing at Brantley's Landing, or at White's Wharf, he will, upon a day or two advance notice, send an ambulance to convey them over to Lake Topopelaliga, 35 miles distant, where they find accommodations with him on shore or boat. He makes monthly trips, or as often as the necessity demands. Of course there are few points where sportsmen can find board or habitation in that section, therefore it would be well, if there are several in the party, to have tents or accommodation for camping purposes. At Fort Kissimmee or Fort Bassenger board can be had from \$3 to \$5 per week. In the vicinity of Istokoga the game is more plentiful than in any section of Florida. Deer and turkeys in great numbers, and bears plentiful. As an indication of the abundance of deer, he says on one of the five trips he has made, the mate of his boat killed four deer without moving from his position, and they all fell within 100 yards of his position (this was near Fort Bassenger).

I contemplate spending next January and February in that section, and it would give me pleasure to be put in communication with any parties who have an idea or a desire to visit that part of the country. When Col. Allen's enterprise is known, I think he will be liberally patronized by sportsmen, for it is easy of access and cheap by steamer or rail from the East.

R. M. BLAKEFORD.

LARGE VS. SMALL BORE GUNS.—Worcester, Mass., March 12th.—I was much interested in reading "St. Clair's" description of the different guns he has owned, as given in a recent number of FOREST AND STREAM. For two years previous to last year I have used a 10 bore 30 inch barrel, 94 lbs. Greener breech-loader, but as I did not care to lug around any extra weight, I exchanged it for a 7 lbs. 14 bore, of same make. Now, this smaller gun throws shot equal in penetration and pattern to the larger bore, but thus far I cannot do as good shooting at a moving object as with the larger gun. What is the reason? In firing at a mark or stationary object I can do as well with it at any distance as I could with the larger bore. The stock of the small gun has three-quarters of an inch drop more than the larger. Would this make a difference? I do not like to give it up and go back to the large bore, for I fully believe a 14 bore is just as good in shooting qualities and much pleasanter to handle than a 10 bore, even for shooting coots. And right here let me say, I was with a party last fall duck shooting on Long Island Sound, and the one who got the most birds used No. 7 shot. How is that, ye sportsman whose motto it is to use no load but such as will knock No. 8? I wish some of your readers could enlighten me, so that I can do better work with my present gun. No use to say the penetration is not as good, or that the shot is not distributed as evenly, for I have been all through that kind of experimenting. JOHN.

The experience of others is in order.

INTO THE DISMAL SWAMP.

MANY have heard, but few have seen, much of the great Dismal Swamp, in Southeast Virginia. With a view to ascertain something reliable about the prospects for fun and trapping, we lately made a trip there for that express purpose. Proceeding to Philadelphia, we took the J. W. Everman, of the Clyde line, to Norfolk; time, 30 hours, which was a little in excess of her usual time, on account of bad weather. Landing in Norfolk at midnight, we had difficulty in getting accommodations, and finally succeeded in the next morning took the ferry to Portsmouth, and on the arrival of the bay line boat from Baltimore took the train on the Seaboard and Roanoke Railroad, eighteen miles to Suffolk. At the steam saw mill of Manchester & Co., about two miles east of here, we made inquiry as to the best plan for a visit to Lake Drummond, and were directed to engage the boatman who would convey us in by canoe on the swamp ten miles to the lake. As it was already past high twelve, we were anxious to get on our way, and Eli soon had together the complement of provender and cooking utensils, and seated in his fine, large canoe, we soon were on our way, and before sundown had made six miles, which found us at the lowest camp occupied by swamper, which locality was about five miles from the mouth of the river. Our shanty was well constructed out of cedar "boards," i. e., shingles about four feet long, not shaved, with a floor of beveled cedar planks. The roof extended well forward over the fire, which had the effect of throwing the heat on us as we lay in our comfortable bunk. Next morning we reached the end of Jericho Canal, where it unites with the Washington "ditch," close to Lake Drummond, and which they both empty into the Potomac and half feet footfall through regular canal locks. We were surprised to find

a man comfortably camping on the banks of the lake, where he had been spending several days. The fish are generally catfish and mullets, with a few perch. The lake is nearly round, and without a clearing or settlement of any kind on its border. Prentiss Duke formerly lived near the entrance of Jericho Canal, but several years since removed over to the higher land near the railroad. The lake is situated in the very center of the great Dismal Swamp, and is from five to six miles across, with an average depth of twelve feet. The water in the lake and canal of the swamp is of the color of strong tea, caused by the cedar and juniper timber which grows abundantly, and is not only found above ground, but beneath the surface, in the form of sound logs, which in places are being taken out for lumber of various kinds. We returned the same way as we went in, stopping again to camp in this dismal place, and in conclusion would say that there has been no word of the novelty of the thing of trapping, but in no place as wild as this swamp did we ever find fur-bearing animals so scarce. From evidence gained, we think there are quite a good many bears in the fall of the year, and a chance offer passes through, with a sparingly few muskrats and coons. The lake has considerable fame, and many come from a distance to see it, but for a trapper we can find many places that will far exceed this in point of profit. SHEETMAN-BOZAL.

Dugdale, Va., March 8th.

Was there ever a sportsman who has not at some time been allured into this sport? (if it comes within the vocabulary of sport, which I very much doubt.) I'll venture to think there is no one who has not at some time enticed all who have an opportunity to indulge once, and not many of us, I think, will have any desire to repeat the dose. Last fall I made my debut in the coon-hunting arena. I was visiting a friend down in Virginia on a little hunting expedition, when, after gunning all day, my friend proposed a coon hunt for the night. I willingly filed into line, and off we started down to Uncle Sile's cabin to get him and his dog, Sambo, and the three entices all who have an opportunity to indulge once, and not many of us, I think, will have any desire to repeat the dose. Last fall I made my debut in the coon-hunting arena. I was visiting a friend down in Virginia on a little hunting expedition, when, after gunning all day, my friend proposed a coon hunt for the night. I willingly filed into line, and off we started down to Uncle Sile's cabin to get him and his dog, Sambo, and the three entices all who have an opportunity to indulge once, and not many of us, I think, will have any desire to repeat the dose. In connection with the discussion of the Palma conditions, the following expressions of opinion have been received from men who have taken part as successful competitors in the contests for

the trophy. They of all others have the right to speak their minds on the question under consideration, and there is a hope for unanimity in their cry of "come on" to their British rivals.

"Old Reliable" says: "I beg to say that I still quite recently I have felt reluctant to consent to a modification of the rules governing the contest for the Palma, for reasons previously entertained by many members of the Association. But the apparent impossibility of obtaining a match in the future, together with the failure of the past two years, has convinced me that it is now expedient to so alter the rules as to meet the wishes of the National Rifle Association of Great Britain, in which case I have the assurance that the contest will be resumed."

"The directors of our Association have this matter under consideration, and I am led to believe that the change will be effected at an early period, but I fear not in time for a contest this year."

"Very truly yours, JOHN BODINE."

Mr. Rathbone, who has served on two teams, says:—"I can see no valid objections to the change in the conditions of the Palma match which you suggest. I think it is the wish of American long-range riflemen to have the strongest possible foreign representation in the future contests for the Palma. The two past years, much against our wish, we have had no team from a foreign country to meet, and we sorely longed that 1880 may not pass away without a lively competition. During the past two years a visit from any one of our former competitors would have been most welcome. I believe the position of the British N. R. A. to be logical and correct, and I also understand that the American N. R. A. have the subject under consideration, and I doubt not will come to the same conclusion, and, I hope, very soon, if it will be the means of a British team coming to see us this year."

"Truly yours, R. KATHBONE."

J. S. Sumner, with the best long-range record in the world, is anxious for another of his quiet squelchings of the Britishers, and remarks:—

"I have read your editorial of last week with much interest. You have presented many good reasons why the conditions should be changed. It does seem as if it was the only way to bring about a match. They have said so much about it, their pride will certainly bring them here if the conditions are changed."

"Yours respectfully, JOHN S. SUMNER."

Mr. Isaac L. Allen is as pungent as ever, and shows that he is in good fighting trim, by writing to the Editor of FOREST AND STREAM as follows:—

"You will please pardon me if I decline to offer any suggestions as to the advisability of changing the terms relating to the Palma trophy."

"The members of the teams of 1876 and 1877 once thought they were entitled to some consideration, but soon found themselves 'set upon,' any suggestion from them being entirely ignored. My opinion is, that if the Board of Directors of the N. R. A. wish to have the terms changed, said terms will be changed, as they have been before, without reference to any suggestions from them."

"Yours respectfully, ISAAC L. ALLEN."

Col. Clark, of Poughkeepsie, who was on team of 1878, and some suggestions for the conduct of a team match. He remarks:—

"While I am in favor of modifying the conditions of the Palma match so as to admit a British team only, I am also in favor of doing away entirely with our present American Team system, and, to speak plainly, I believe there is no one obstacle so much in the way of bringing about an international match as our present system of team coaching. I would place each man of the team entirely upon his merits, and if necessary allow no person to have intercourse with him during the shooting. We have had enough of the American Team system to test the quality of our rifles. Now let us test the metal of our marksmen by placing each man of the team upon his own responsibility. This system would bring together our best shots, and I have no doubt that a match on this system could be arranged with our British friends. It has been said that such a man is not much of an individual shot, but he would give himself up to the coach and would make a good team man. Why not allow him to do all the thing if he is a good trigger puller, and leave the other seven to adjust his sight and instruct him when to pull? Is it not almost a pity to use such men on a team, for if a big score be credited to them we never hear of them after. It may be remembered that in the 'Spirit of the Times' match, which occurred a few days after the Palma match, the British eight scored quite a number of points more than the American eight in this match. There was no coaching allowed. If our rifles are superior, what caused such a wide difference in the scores of this and the Palma match? I believe it is a matter yet to be decided which are the superior marksmen."

"I. F. CLARK."

Capt. L. C. Bruce is working with vigor for recouping the attendance of a British team here this year, and Capt. W. H. Jackson, the captain of the last American Team and the present holder of the trophy, says he will write more fully in a later letter and remarks for the present:—

"I am pleased that you are making an early move. I will write a few lines for the FOREST AND STREAM. We must all do something to stir up an interest in long-range rifle practice. I do not know that we will get the Englishmen over here. Whatever we may do, we can take away any excuse upon their part."

"Prof. Chas. E. Dwight writes from Wheeling, West Va.:

"The proposed plan of future competitions for the international rifle matches for the trophy Palma, as proposed in the last issue of the FOREST AND STREAM, meets with my hearty approval, and seems to me to be fair and just. The adoption of such a plan could do nothing to make an international contest more remote or improper than it is at the present time. Whether long-range shooting owes its lethargy to the want of stimulus of these international contests, or to the fact of the sport being so largely participated in by professional shooters, maintained by our enterprising manufacturers, is a question which if debated might elicit a variety of opinions."

"No one would be more pleased than myself to see an international contest. I have thought the best way to secure them would be for the teams to visit the opposing country alternately regardless of the result of the match. The entrance fees of the contests would, if given to the team, go far toward paying the expenses of their visit to the opposing country. It seems to me that this plan would tend more toward keeping the interest up in both countries than the former manner of deciding the place for the contest to be held. It would also, I think, have a tendency to introduce American arms into the country visited by the American team."

"Yours truly, CHAS. E. DWIGHT."

Frank Hyde says:—"Your admirable editorial in last week's FOREST AND STREAM is so conclusive upon this question that little remains to be said. I am decidedly in favor of making it a truly international match. The title is now a misnomer, and, besides, the conditions are unfair to us, for while we can put only one team in the field, Great Britain is allowed something like a dozen; and for Canada, Scot-

land, Ireland and Australia are admitted, there is no reason why each principality in India, South Africa, etc., should not be represented. In the past our superiority in runs and drill has been such that we could stand this, but now England is imitating our rifles and ammunition, and will meet us next time on more equal terms."

RANGE AND GALLERY.

MASSACHUSETTS.—Boston, March 13th.—There was a large gathering in the "winter shed" at Walnut Hill range to-day, the attraction being the tenth competition in "everybody's match." The day was not just what a rifleman would have selected for the scoring of an extraordinary record, but, in spite of the many disadvantages that the elements threw in their way, a large number of the competitors succeeded in repeatedly finding the bull's-eye, and adding some fine scores to their previous records. The lights and shades were fair, but the wind was unsteady and vacillating, ranging from northeast to east in direction and from one-half to one and one-half points in intensity. Captain Jackson, with his Stear's rifle, government model, loaded with government ammunition, which he himself loads, leads the van with a band-score of 48; P. Brown, 43, and H. Tyler, 42, with the same class of rifle. Among the marksmen who practiced with sporting rifles, W. Howard ranks the highest, having started off with a four and finishing up with nine "centers," making the handsome score of 49, which, taking the weather conditions into consideration, was an extraordinary performance. There were 100 entries at yesterday's meet, and appended are the highest scores made:

W. H. Jackson.....	5 5 5 4 5 5 5 5 4 5 4 8
W. Howard.....	4 5 5 5 5 5 5 5 5 5 5 49
J. Nichols.....	5 5 5 4 5 5 5 5 5 5 5 48
W. Charles.....	5 5 5 5 5 5 5 5 5 5 5 48
C. W. Grilling.....	5 5 5 4 5 5 5 5 5 5 5 47
E. Bennett.....	4 5 5 5 5 4 4 4 5 5 5 46
R. D. Archer.....	4 5 5 5 5 5 5 5 5 5 5 46
R. Davis.....	4 5 5 5 5 5 5 5 5 5 5 46
J. P. Brown.....	4 4 5 5 5 4 4 5 5 4 4 43
H. B. Southwick.....	4 4 5 5 5 4 4 5 5 4 4 43
H. B. Southwick.....	4 4 5 5 5 4 4 5 5 4 4 43
E. Whitler.....	4 4 5 5 5 4 4 5 5 4 4 43
J. Jordan.....	4 4 5 5 5 4 4 5 5 4 4 43
C. P. Melges.....	4 4 5 5 5 4 4 5 5 4 4 43
C. A. Arthur.....	3 4 4 5 5 4 4 5 4 4 4 39
A. Locke.....	3 4 4 5 5 4 4 5 4 4 4 39

According to the terms of the handicap, W. H. Jackson, W. Charles, J. P. Brown and H. Tyler, all of whom used military rifles, are entitled to two more points on each of their scores than appears in the table above.

Boston.—Mammoth Rifle Gallery.—The second week of the Consolation Rifle Match has shown some wonderful shooting in the first class. Mr. W. H. Harrison takes the lead with 40 and two 39s. The management announce that a new rule is adopted for hereafter in case of ties; it is as follows: When the contestants have been notified to appear and shoot off the tie, and fail to do so, they relinquish all claim to shoot-off, and must accept the prize in order of their other scores. No one to appear and shoot. For example, last month there were three ties for the first place; if two should appear they take the first two prizes, leaving the third one for the absentee. This rule is to be strictly enforced, and the management hope all will govern themselves accordingly. The following is the standing of the several competitors to date; 150 feet; rounds 8; possible 40:—

W. H. Harrison.....	39	40	—118	C. Edwards.....	37	39	—114
W. H. Arnold.....	39	40	—117	Frank Hollis.....	37	38	—113
D. N. Sherburne.....	39	39	—117				

L. W. Farrar.....	37	38	—113	Col. Nat. Wales.....	31	37	—108
D. D. Swift.....	37	38	—111	H. C. Matthews.....	31	37	—108
H. Shaw.....	37	38	—111	E. B. Shaw.....	35	37	—107
Gordon McKenzie.....	36	37	—111	P. A. Bradford.....	35	37	—107
G. C. Arthur.....	36	37	—110	W. P. Stuart.....	34	36	—108
P. Bassett.....	36	37	—110	J. Golden.....	35	36	—106
F. J. Bonney.....	35	36	—109	A. H. Casley.....	34	35	—105
S. E. Ring.....	35	36	—109	G. E. Estey.....	35	35	—106
M. L. Pratt.....	35	36	—109	C. C. Staples.....	34	35	—104
Thos. Howe.....	35	36	—108	C. R. Curtis.....	34	35	—103
N. S. James.....	35	36	—108	G. W. Dyer.....	34	35	—103

Boston.—Gallery Practice.—The new classified match opened at the Magnolia Gallery with an abundance of entries and fine scoring. F. Hollis again leads the best scores, standing:—

F. Hollis.....	49	48	—148	P. Hall.....	46	46	—137
W. Henry.....	48	48	—144	J. H. E. Schaefer.....	43	43	—132
F. M. Smith.....	47	47	—140				

W. H. Farnham.....	45	46	—139	H. Lawrence.....	44	45	—137
A. B. Thomas.....	46	46	—140				

P. D. Swift.....	45	45	—140	A. Goss.....	44	45	—138
J. Anderson.....	43	45	—138	H. Taylor.....	43	44	—136
A. L. Howe.....	42	43	—130	F. Dudley.....	42	43	—132
C. J. Foy.....	42	43	—129	T. Carr.....	42	43	—130

MASSACHUSETTS.—Springfield, March 16th.—Rod and Gun Rifle Club scores made to-day in a sharp run with some fog at 200 yards; possible 50:—

L. H. Mayott.....	5 5 5 4 4 5 5 5 5 5 4 8
S. S. Burstead.....	5 5 5 5 5 5 5 5 5 5 5 4 4 47

SCHUTZEN NOTES.—The Board of Directors of the Schutzen Park at Union Hill, N. J., are making arrangements for a fair to be held at the park; time, 6th to the 20th. Connected with the fair will be a grand prize shooting for an aggregate of about \$25, open to all comers. The programmes for this shooting will be issued in a few days.

The New York Schutzen Corps, Capt. Aery, will commence with their regular practice shootings the first week in April.

New York.—Headquarters Zettler R. C.—Shooting for club prize March 24; 20 shots; Creedmoor targets, reduced to gallery distance; possible 100:—

M. Hares.....	98	I. H. Brown.....	65
P. Jennings.....	98	M. Dorier.....	94
B. Zettler.....	90	J. Dutail.....	91
Wm. Klein.....	90	T. O'Neil.....	90

Total ring, 1,450; total Creedmoor, 336. Average ring, 237.15; average Creedmoor, 65.45.

M. M. MAITLY, Adjutant.

CREEDMOOR PROGRAMME FOR APRIL.—The competitions upon the range at Creedmoor, during the month of April, 1880, are announced as follows:—

Saturday, 3d.—Mr. Frank J. Donaldson, Executive Officer.—

"Off-Hand Individual" Match; conditions in last week's FOREST AND STREAM.

Wednesday, 7th.—Maj. Geo. S. Schermerhorn, Jr., Executive Officer.—"Ballard Rifle" Match, 100 and 200 yards, and "Remington Rifle" Match, 700 yards.

Saturday, 10th.—Gen. Geo. W. Vangate, Executive Officer.—"The Remington Shot Gun" Match, 800, 900 and 1,000 yards, and "Off-Hand Individual" Match.

Wednesday, 14th.—Col. Geo. D. Scott, Executive Officer.—"The 'Alford' Match.—Twenty competitions (semi-monthly), twenty Remington Military Rifles, N. Y. State model, 50 caliber, or U. S. Government pattern, 45 caliber.

Saturday, 17th.—Mr. James Grant, Executive Officer.—"Remington Rifle" Match; distances, 900 and 1,000 yards; and "Off-Hand Individual" Match.

Wednesday, 21st.—Col. J. H. Cowperthwaite, Executive Officer.—"The 'Secretary's' Match, first competition. Conditions: Open to everybody. Distances, 300 and 500 yards; five shots at each distance. Position, standing, at 300 yards; at 500 yards, any, without artificial rest. Rifle, any of the following: Winchester Military, Peabody-Martini Military, Snider Military, Remington Military, Hotchkiss Military, Martini-Henry Military, Sharps Military, and Springfield Military. Entrance fee, 50 cents for each entry. Competitors allowed three entries, but only the highest score to take a prize; prizes—first, \$100; others, percentages.

Saturday, 24th.—Maj. Henry Fulton, Executive Officer.—"The Remington Shot-Gun" Match; 100, 200 and 300 yards.

Wednesday, 28th.—Lieut.-Col. H. G. Littlefield, Executive Officer.—"The 'Alford' Match. 'We Will' Match; 300 and 600 yards. 'Winchester Rifle' Match; at the running deer target, distance, 100 yards.

Tickets of membership in the National Rifle Association for the year 1880 can be purchased either at the office of the Association in New York City, or upon the Range at Creedmoor. Members will be entitled to free admission to the range grounds, and to use of targets at all times (Sundays excepted), and will, upon application at the office, be furnished with a card entitling them to railroad transportation between New York or Brooklyn and Creedmoor at the reduced rate of thirty cents excursion.

ESSEX vs. PRINGSHOUSE.—Narrah, March 10th.—A friendly contest took place at the range of the latter on Wednesday evening last, which was closely contested by both clubs, members of each team shooting alternately, the highest score being 47. The match was won by the Essex Club:—

W. A. Cleaveland.....	42	A. G. Neumann.....	45

WHAT A HUNTER KNOWS.

BOZEMAN, Montana, Feb. 28th.

Editor Forest and Stream:—

Replying to "Hunting Rifle's" query in issue of Jan. 31st, the weight of the 40 caliber hollow-point bullet to which he refers should have been 122rs, instead of 102rs, as the types had it. It was thought unnecessary to correct the error, the proportion of powder to ball given (1 to 2.28) fixing the true weight. If he will send his address to Walter Cooper, gun dealer, Bozeman, Montana, he will send him a lot of the balls for trial in his rifle. It is a patched ball, and of sufficient length for a good hunting ball. On account of peculiarities of caliber, grooving, etc., in different rifles ball that flies true from one rifle will not necessarily fly true from others nominally of the same caliber. The Winchester, .44 cal., for instance, is not, I think, more than .43 cal., and

with other rifles. This ball is gotten up for a Sharps rifle, and from witnessing its shooting up to 200 yards I believe it a properly shaped ball. Mr. Cooper has also gotten up Express moulds for .44 and .45 cal., patched balls modeled from standard English balls, and I am told by those who have used them they fit true.

The experiences of an expert rifleman like Mr. Rabbeth at the target are very valuable—more so than a large quantity of theoretical trash and nonsense that so often, perhaps unavoidably, encumber sporting journals. His remarks are sometimes obtained at the target, but puzzle experts, but they should not be cast aside without due consideration. My experience differs from his in one or two particulars, more especially as to the necessity of the lubricant wad. With the patched ball I understand that all the targeting reported was done without wiping, and, with the exception of the first few rounds, without a lubricant wad. My own experience with the patched ball, and without the lubricant, is that it soon loses its accuracy in successive shots, unless wiped after each discharge—the patch stripping off, the rifle's leading and want of accuracy necessarily resulting. This appears to be the experience of rifle makers both in this country and Great Britain, as it is understood that all invariably use a lubricant wad of beeswax and tallow or sperm oil with the patched ball. I understand also that most of the British rifle makers use a patched ball in the Express rifle.

Mr. Rabbeth reports only one experiment with an Express ball—.45 cal. Canollured ball for the Sharps Rifle—making a group of sixteen inches at 200 yards. That, in my opinion, is about as good a target as is usually made by any solid Canollured naked ball at this distance, and should not be an argument against the accuracy of this particular ball. I doubt the practicability of swedging a hollow-pointed ball, yet they are comparatively so light that no difficulty should exist for casting them without flaws.

I had Mr. Rabbeth obtained from the Sharps Company balls from moulds ordered and made by that company for me in 1876 (.44 cal. patched-and .275ers. weight), he would have found them all he could have desired as to accuracy, and all they should be as to destructiveness. It was modeled from an English ball, except it had a more pronounced hollow point.

There are several objections to the Sharps .45 cal. Canollured Express ball. I much prefer the patched ball for hunting, on account of superior accuracy. In the second place, the point seems too blunt. I think a ball with an orifice in the point more than three-sixteenths of an inch will lack accuracy. It has a .22-inch orifice. Thirdly, the explosive cap in the orifice is dangerous to a certain extent, and, in my opinion, superfluous. With the proper velocity given the ball, and without the explosive, it will, of its own weight, expand or explode at the proper distance, so as to enter the animal—and with as much or more destructiveness as with the explosive inserted. Moreover, a twice is liable to cause, before striking the animal. I consider the insertion of a copper tube in the end of the bullet, where of no greater diameter than three-sixteenths of an inch, unnecessary for accuracy, and must interfere materially with its expansion and destructiveness.

I have now used the Express ball from an American brood-load, and have found for two seasons that it is well adapted for the two preceding years. My prejudices (caused by too much being claimed for it, in my opinion, by those evidently inexperienced in its use) were against its merits. Mr. Nighy's opinions, however, caused me to give it a trial, and after experimenting to find a ball of proper weight to suit my rifle, and then using it for two years on antelope, deer, elk, grizzlies and mountain sheep, I have no hesitation in saying that, for hunting purposes, it comes up to the standard claimed for it by the Irish rifleman. A reference to my book shows that during the season of 1876, I shot of twenty-nine deer and antelope known to be hit fairly in the body between shoulder and hip (nineteen of which were "punchshots"), five required a second shot, or one in nearly six—charge, 60grs. C. & H. No. 6, and 275grs. ball. For bear, a 380grs. hollow-pointed ball was used; but the powder was insufficient for a proper velocity, and the results were unsatisfactory. During the season of 1879, of twenty-four deer and antelope hit fairly in the body, only one required a second shot, one in twenty-four. Of thirty-five deer and mountain sheep hit fairly in the body, six required a second shot, one in five and two-thirds. Of eight bears killed (seven grizzlies), only one required a second shot. This record does not include animals known to be hit in the limbs—some of which got off. Charge used, 60grs. C. & H. No. 6, and 275grs. ball for deer, and 310grs. ball for bear and elk. This last ball, made by boring out a 280grs. ball, produced very satisfactory results, as the record shows, though it is a little heavy for the powder, and has not quite taper enough for firing consecutive shots without wad. The powder used was the result of 1876, arising from using more powder, and probably placing shot more carefully—the "wire-edge" of the sport having probably worn off.

During 1876 and 1877, of about seventy deer and antelope hit with the solid ball, about one-fourth required a second shot, and about one-half of the elk and bear. In those days, however, a bombardment was kept up on a grizzly as long as he kicked.

In the successful use of the Express ball, a strong and moderately quick powder is necessary (such as C. & H. No. 6). As an evidence that my opinion is correct, I will state that the powder I am using cost \$3 per pound (mostly from mistake of the shipper), and would still be used could it be had no cheaper, as it is superior to any other brand to be obtained.

In conclusion, I would advise "Hunting Rifle" to depend upon his own experiments in the solution of rifle or ammunition. If he contemplates hunting larger game, this experimenting will familiarize him with the powers of his own rifle, something essentially necessary for a successful hunter. If he thinks of using the Express ball in his .40-caliber, I advise him to have it charged for the 60-grs. shell.

Feb. 23th.

Archery.

BOSTON NOTES.—Archery has taken a firm hold here, and before July I hope to see half a dozen more clubs springing up in and around the city. The expected match between New York and Boston gentlemen, which is to take place in May, is much talked of, and there is considerable curiosity to know who the lucky ones will be who are to represent Boston.

Before many weeks we shall probably form a club to be known as the Boston Archery Society. This society is for the encouragement of archery in this section, and we shall probably meet once in two weeks. A private practice club for the encouragement of long-range shooting is also talked of, some of the rules of the present P. F. C. Club seem to be better suited to suit the Eastern archers. During the coming season we shall probably shoot a great deal more than some matches.

JANCK WOOD.

—The Robin Hood Archery Club of Nyack, N. Y., is selecting a team for the coming campaign. The club has some seventy-five members, and good work may be expected from it next summer.

CORTLAND ARCHERY CLUB.—Cortland, N. Y., March 13th.—The following score was made by the members of the Cortland Archery Club at Van Buren Hall; 50 arrows; 50 yards:—

	First 30.	Second 30.	Third 30.	Total.
Dr. F. O. Hyatt.	193	205	216	610
Willis Cloyce.	191	202	210	603
James H. Schenck.	191	199	190	580
A. Schermerhorn.	181	184	187	552
A. Mahan.	171	184	184	539
J. S. Crenshaw.	173	156	189	518
Frank Turner.	168	159	174	499
S. Hull.	157	144	145	446
Dr. G. H. Smith.	151	137	160	448
Mrs. A. Mahan.	91	139	123	353
Miss Maggie Force.	103	117	93	313

A. M.

MANHATTAN BOWMEN.—This new club has been organized in this city, with the following officers:—President, D. M. McLean; Vice-President, W. C. Beecher; Secretary, J. O. Davidson; Treasurer, S. E. French. The members practise in the Ninth Regiment Armory hall, sharing there the privileges of the New York Club.

—In the current number of *Harper's Bazar* appears a page drawing from the pencil of an artist, whose truthful character sketches last fall of the Eastern Archery Movement at Boston were enjoyed by the archery fraternity everywhere.

The picture represents a scene in the Ninth Regiment Armory, during a Saturday night practice shoot of the New York Archery Club and the Manhattan Archers—these two clubs having shot amicably together since their organization. We recognize in the picture many well-known members of the two clubs, and not only are the likenesses there, but also the individual manner of each.

A lover of the bow himself, the artist has faithfully rendered all those little details of the archer's outfit, which gives the picture an added value in an archer's eye, rarely accorded to drawings by those not "up" in archery.

Mr. Davidson is doing much with pen and pencil to give those not conversant with archery truthful representations of how this beautiful and pleasant sport is carried on.

"ROUNDERS" IN ARCHERY.—New York, March 14th.—The New York Archery Club of this city has passed a resolution excluding members of all other archery clubs from membership. This they claim will prevent any claims of other clubs to a share of the honors to be won hereafter. This resolution will no doubt accomplish the desired end, but will not exclude many deserving members and keep the club in the background during the summer months?

The New York Club have based their action on very sound and sufficient grounds, and in setting their faces against what are known in other sports as "rounders" have taken a commendable lead. It is possible, however, that this action of the club is premature. Archery is yet in its infancy; clubs are few in numbers and weak in membership, and it may be for these reasons that the club is so susceptible of drawing the lines too close. In inter-club matches it is plain that where a member of many clubs shoots against one of his own clubs, the credit of the victory is decidedly complicated and dubious. This, it strikes us, should be provided against, and it may be provided against without totally barring members of more than one club from all the club privileges of each. An archer might belong to one club, with which in all inter-club teams he should shoot. At the same time, he might be allowed the privileges of a semi-honorary member in other clubs, on membership with certain well-defined restrictions, which should yet do him in no wise from a full participation in all club contests and privileges. We should be pleased to hear from some of the older archers on this question. Let us arrive at the middle course, which will be the safest and most progressive for archery to pursue.

DEFERRED.—Several interesting and timely communications have necessarily been deferred.

Yachting and Canoeing.

IMPORTED YACHTS.

AS yachting on the lakes takes stronger hold upon the masses the desire to import craft of foreign build from Cuthbert's yard at Toronto, the best-known builder in the West, becomes more manifest. It has been an open question as to what standard of club rules, or of a vessel's license, points a necessary adjunct to escape interference by revenue officials abroad. As there is a duty on "articles manufactured of wood," yachts under twenty tons should be sailed from the Canadian yards of their birth into our harbors in a *bona fide* manner, when they will circumvent paying duties on the same grounds as a suit of clothes worn on the back. It would seem as though the time had come for an entire revision of the laws passed by Congress relating to yachts. We hope that the liberal persons who are to stop in the fore and demand about five minutes' attention to the matter at the hands of our representatives, who can have no earthly objection to an overhauling and simplification of laws originally intended to foster the construction and sailing of yachts, but which have long ago become a drag instead of an aid to the object sought. With the assurance that the revision is asked not in the interests of an onslaught upon Uncle Sam by red-handed pirates, nor yet with a view to starving him by nursing contraband trade, even the most suspicious and unconscionably tender legislator may so far relax his protective hobbies as to grant the small boon asked by a sport which has attained a growth sufficient to demand national recognition. The following is the letter received:—

WASHINGTON, D. C., March 9th.

Editor Forest and Stream:—

Sir—Relating to yachts of over twenty-ton build, of foreign build, imported and owned by American citizens, this Depart-

ment desires to say, that a yacht of foreign build, of the burden mentioned, could neither be enrolled nor licensed as an American vessel, nor be entitled to the privileges defined in Section 4241 of the Revised Statutes, except by special Act of Congress.

As to the right of such a yacht to carry the American flag, this Department concurs in the opinion expressed in Article 236 of the regulations prescribed by the State Department for the use of the Consular Service of the United States, which is as follows:—

"The privilege of carrying the American flag is under the regulation of Congress, and the statutes have not made that privilege practically available to any ships, except those duly registered or enrolled at some Custom House."

Very respectfully,

H. J. FRENCH.

Assistant Secretary.

MEASUREMENT.

Editor Forest and Stream:—

To my way of thinking, there is no one man or body of men than can figure up a just table of allowance. You might just as well expect them to figure exactly the weight of construction. In the first place, we must have every owner of a small yacht understand that they are to ballast their yachts to their own liking, and keep their ballast just where they put it in the first place, that is, not shift from side to side or end to end while under weigh. This done, every tub will sit on its own bottom. I then would propose to do away with our tables of allowance. Make your classes of center-boards and keels, make them of sloops, schooners, cutters, yawls and sharpies. Give a man to understand that if he desires to go into the 20ft. class, his yacht must not be over that limit; if into the 30ft. class, not over 35ft. deck line, and so on until you arrive at the largest available yacht, even if it brings but two boats out for competition.

The judges have then not got to pore over a stationery store or work like clerks in some down-town shop; they will have to stand no censure about half inches, or split seconds, or the difference of length. The boat first across the line is the winner, if an anchor start, and also a winner if more than the time has elapsed between her and her rivals in a flying start.

As the table of allowance now is, two boats may be just as long on deck, the same beam and sail draft; one's stern may rake more, and she would probably get allowance on a few inches. Two boats are in the same class. By water line measurement one is 20ft. on deck, 10ft. beam and 21ft. water line; the other is 20ft. on deck, 10ft. beam, 21ft. 6in. water line. The smallest boat actually allows the largest by water line measurement at present in vogue.

When men understand they can build so long, and are restricted only to fixed ballast, their pocket-books and fancy will determine which class their ambition lies in, and we shall see a more uniform size of vessels with more variety of rigs and models. It will also determine whether a sloop is better than a cutter, or cutters better than schooners, etc. "Every tub will sit on its own bottom." Never consent to put a shifting ballast boat against one that keeps hers under the floor.

Boston, March 5th.

We object altogether to any measurement by length for reasons set forth in these columns. We also take exception to the child's play of allowing so many minutes to cross the starting line. It is a race of its display of seamanship and skillful maneuvering. All of a class should start at one gun, and their times be taken from the gun. We have enough lubberliness about our racing as it is, without trying to rob the sport of all the enticements and chances to wide-awake spectators. Placing a premium on sloth and incapacity by all sorts of allowances and faint-hearted commiseration rules with tubs and lubbers, should be done away with wherever possible. Yacht racing ought to be graduated out of hazy and leading strings. In relation to shifting ballast among small boats, our correspondent has a clear head.

NEWPORT "CATS."

Editor Forest and Stream:—

A good many years since, further back than I sometimes find it pleasant to look, I noticed at Newport, R. I., the finest fleet of small sailboats I had ever been my luck to see. They were all of them est-vised, with short booms and high, narrow-headed sails; were fine sea boats, sure in stays, and every one of them was a keel boat. Their owners were practical men, who gained a living by taking out sailing parties, and they understood handling their boats to perfection. I often talked with these men about center-boards, but it was no use; they considered their boats perfect, and that the keel was what made them so. Now, however, the visitor to Newport will find all this thing changed. It is as difficult at the present day to find there a keel cat-boat as it was twenty years ago to find a center-board.

What has caused the change? Solve the riddle, *mon ami*, and if you can't, pass it on to some of the cutter fraternity, who, instead of using their brains in improving what is good, are attempting to introduce something that has been thoroughly proved an inferior article. After Messrs. Cutter & Co. have given up the conundrum, we can accommodate them with still another.

QUI VIVIT.

We certainly take a very different view of a perfect boat from what our correspondent seems to set up as his standard. The Newport cat-boats we consider without question the embodiment of the very worst elements a yacht can possess. They are exceedingly dangerous when fully rigged, very hard on their helms, and very hard on their crews, and under the most narrow head, cannot sail close on account of their great hoist of narrow head, permitting the gaff to fly broad off when the boom is trimmed fore and aft, and they are leavely and very slow in rough water, to such an extent that we boxed about an hour in one of them trying to fetch a mark not an eighth of a mile to windward. They yaw frightfully, and with helm hard across the quarter will fall to answer till a favorable sea throws their snout again where it ought to have pointed right along.

It is not difficult to see about designing a craft combining all the worst qualities known we should choose something like the Newport cat as our model. Make those vessels of less beam, however, greater depth, add a keel and low ballast, less hoist and more gaff, and the result would show a boat which would be safe, easy, dry, comfortable to steer, reliable in a sea-way and closer on the wind. We think it high time that the humiliating custom of taking our cue from smackmen, clam-diggers and the like gave place to a little more confidence in intelligent and special training. Practice is very good in its way, but practice salted with a little brains ought to go for a good deal further.

It is not difficult to assign a reason for the regrettable change from keel to center-board in Newport. New York fashions there rule ashore and they rule aloft. When New York again takes to be keel the clam-diggers of Newport will follow fast enough.

and there will be less business for the undertakers every season, which no one will regret. The risks of the light-racer performer ought not to be accepted in a well-designed yacht. As long as they are present, sailors and men who are not agents for life insurance companies will repudiate such craft as productions not even equal to those of the Fiji Island savages.

A REPLY TO "CORINTHIAN."

Editor Forest and Stream:—

In a late article "Corinthian" he attacks Mr. Smith for his assertion that length measurement would tend to produce over-spurred vessels, and this from the gentleman who spurred *Vireo*, *Madcap*, *Intrepid*, *Tidal Wave* and the new *Mischief*, is remarkably good, to say the least; much more so it seems to me than he would make it for Mr. Smith. "Corinthian" should remember that an architect makes his plans of a house according to the requirements of the person proposing to build, and likewise a yacht designer must do as the owner wishes, though often against his own better judgment. However this may be, I don't see that "Corinthian's" remark alters the truth of Mr. Smith's assertion at all. I was once inclined to think as "Corinthian" does—that length is the principal and only element of speed, but I have had reason to change my mind somewhat. I have seen the cutter *Midge* sailing day after day in company with *Midge*, *Schemer* and *Chief*. She could not hold her own with *Schemer* or *Chief*, and could not gain much if any on *Midge*. Now *Muriel* is 40.55 feet water-line, *Chief* 45 feet over all, and *Schemer* 37.17 feet water-line, while *Midge* is but 36.6 feet water-line. In a run from New London to Newport the *Chief* and *Schemer* beat *Muriel* badly, and *Midge* also got in well ahead of her. Glancing at the beam of these vessels we find *Muriel* to be 9.14 feet, *Schemer* 14.5 feet, *Midge* 10.9 feet. The *Chief's* beam I do not know exactly, but she has, I should judge, about 15 feet. Taking in view these figures and facts, should not beam have quite as much consideration as length, and were *Muriel* to meet these vessels in a race on a length basis, would she have her due? Likewise in the *Volante-Schenck* race spoken of, *Volante* has 40 feet on water—by 12 feet beam, to *Schemer's* 37x14.5, and the *Chief* the *Volante* was beaten, and "Corinthian" attributes to the fact that she is slow; so indeed would be the conclusion in any case when narrow and beamy yachts sail together on length; except perhaps in double reef breezes, I have seen but few very narrow yachts of the English type sailing with wide center-board vessels, but those I have seen cannot have a fair race with center-board yachts of similar length in their average racing weather without receiving considerable time allowance, owing to their being smaller.

That the English type of boat is the more weatherly any one will allow who has seen them in the native waters, and if a gentleman wishes a rough-weather yacht why should he be deterred a fair race with his center-board friends, which, I think, is attainable as near as possible by the present Savannah rules, which Mr. Smith advocates. I cite these instances as bringing together vessels of opposite extremes which it might be desirable to race together.

A time allowance based upon length alone will do well enough when all vessels are of the same general shape, but it cannot be made to apply fairly to such cases as I have spoken of. "Corinthian" also inquires, "Why would not be fair to compare *Intrepid* to *Rambler*, one of her own class, rather than to *Tidal Wave*." Probably it would; so let us make the examination. *Rambler* is 27.64 feet longer on water-line than *Intrepid*, and by length allowance this would give *Intrepid* something more than a minute less than what she now receives from *Rambler* by cubic allowance!

As to freeboard, *Rambler* has but 2 feet 8 inches, while *Intrepid* has 3 feet 9 inches. The *Rambler's* draught without keel is 8.2 feet, or 6 per cent. of her length, while the *Intrepid's* draught without keel, or 8 per cent. of her length. How much this difference avails *Intrepid* by cubic allowance "Corinthian" need not be told.

He seems desirous, too, of having pointed out a yacht of scientific construction that has developed speed without some alterations. Saying nothing of many English yachts of this kind I could name, I will point to *Madcap*. Three days after her sale she was her first boat she entered the N. Y. Y. Club Regatta and was an easy winner against such craft as *Kaiser* and *Active*, the latter a much larger yacht, built from a model by Mr. William F. Force. "Corinthian" also casts reflections upon *Vindex* as being unwieldy yachts. The best argument on the question of her speed is her former owner's well-filled plate-locker, trophies of races won by a keel against center-board yachts.

As to any question of her weatherly qualities, the fact of her cruising the coast from Cape Sable to Savannah and twice rounding Hatteras in midwinter is a sufficient answer; a fact, I think, "Corinthian" would hesitate to undertake in some of the sloops of the same class whose good qualities in other respects he is not slow to praise.

It would seem as though "Corinthian" had some other object in view than an argument on time allowance when he so rabidly attacks Mr. Smith and his productions, and when he aims so gratuitously and uncalled for a slur at the owner of a little cutter. I pray "Corinthian" will take it in good part when I express my sentiments to this effect—that a gentleman when writing under cover of a *nom de plume* should exercise greater courtesy than when he assumes the responsibility of his words over his own name.

We regret that the desire to leave our columns open to all shades of opinion should have been the untoward cause for the appearance in print of the allusions referred to by Mr. Cromwell. Concerning measurement by length we believe "Corinthian" is too good a mathematician to countenance any such folly, though his letter may have made it appear so. Length measurement is the straw at which drowning men clutch when they find themselves too unattainably to grasp a simple problem. Intelligent persons who begin with a prejudice in favor of simple length measurements discover its shortcomings upon investigation and come to the conclusion that it is altogether too simple. As Mr. Cromwell correctly remarks, it will do well enough for boats of one type, but in that case almost any arbitrary element will suffice for comparison of size. It is in matching different types that the cloven foot of simple length is detected. As long as length is synonymous with size it can be applied with equity. When it is no longer interchangeable with size its application becomes illogical and unfair and its effect is vicious, forcing the growth of short, dumpy vessels will explain this even to the most obtuse. A *Volante* cutter 30x12x29 for his own good reasons, right or wrong. B builds a sloop of the same length, 30x25x7. On length both would sail on even terms. They will not in the following proportion: the cutter, 30x12x29=6,150; the sloop, 30x25x7=5,400. In other words, the sloop may be 50 per cent. larger and yet enter this amount unpaid when racing on length. The fallacy of such a rule is so glaring that it is a wonder how it ever gained widespread adoption. The effect of such a rule is equally obvious. No one could build anything departing from the beamy type without giving up all hope of racing. Hence the unfortunate

preponderance of the round "wash bowl" vessels in our fleet with all the drawbacks of huge spars and excessive canvas, want of accommodations, except under a trunk, unseaworthiness unless under a very slow rig, and dangerous enough to count the victims drowned annually by the hundred. Such craft may be the highest conceivable in naval design to a certain class, but we submit that educated men will be slow to accept the results of the day as anything more than the clumsiest makeshifts in which the elements of a safe, handy, roomy, weatherly vessel are swamped in the necessity for producing the most power—the greatest size—on a given length, a method by which taxation is wrongfully escaped at the expense of the most desirable qualities the perfect yacht should possess. Length measurement is the most detrimental ever devised, and with the intelligence of the age it should be a disgrace to find the rule on the books of any club.

UNCAPSIZABLE BOATS.

Editor Forest and Stream:—

It was with no small degree of pleasure I read your yachting columns in your last number. I have had considerable experience in boating and shipping in various countries, yet it with all confidence I offer you the following remarks, relative to two improvements of a nautical character, which I have introduced, and which improvements are now being protected by letters patent here and in other parts. One of these inventions is for preventing open boats or small vessels from upsetting by pressure of wind or squalls. The other is an improvement for yachts, or for other vessels, by which they can be made more weatherly than heretofore, and that without the use of center-boards and false keels. I am quite convinced that science and practice have done nearly all that can be done in the way of perfecting the lines of ships, the displacement, the plan of sails, etc. But the perfection of present perfection has been carried too far in other respects, and hence many simple yet important things relative to other qualities have been entirely overlooked. My present improvements are in the latter direction. I have submitted these improvements to several gentlemen of high scientific attainments, civil engineers, yachtsmen, and nautical men. On first naming the matter to them, I was always met with a smile of incredulity; yet all of these gentlemen, on seeing the matter illustrated, were just ready to admit the importance of these improvements in complimentary terms.

I am sorry I cannot show my models to the public at present, as they are now in Washington; but privately I can refer you to a gentleman of this city who is noted for his scientific knowledge of yachting. He has inspected my models and approved them. With your leave, I shall offer further details in a subsequent communication. JOHN McLEOD.

New York, March 10th.

The inventor has explained his improvements to us, and they are certainly ingenious enough to justify full particulars, as soon as he is prepared to make public the specifications upon which his patents are founded.

YACHTING NEWS.

JERSEY CITY CANOE CLUB.—The editor of these columns returns his thanks for recent election to the J. C. C. C., and hopes to meet the members of the club with a paddle of his own construction this spring.

EMPIRE YACHT CLUB.—Officers for the year:—Commodore, Henry H. Smith; Vice-Commodore, Peter Krumelch; Rear Commodore, John S. McDuff; President, William O. Davis; Secretary, James McGilgott; Treasurer, William C. Foran; Measurer, Andrew D. Hunt; Regatta Officer, Richard Cullen; Robert Miller, John Widdor, John Fitzsimmons and Theo. Worsbe. A new club-house is in prospect.

STREAM YACHT BURNED.—The *Arron*, of Genoa Lake, Wisconsin, was burned by an incendiary March 11th. Loss nearly \$15,000. If we mistake not, this is the *Arron* built by the Kirby Brothers, of Wyandotte, for high speed. She attained about 15 miles an hour.

Woman's Column.

IN SEARCH OF FERNS.

AS I listen to the stormy music of the March wind, while it "bloweth where it listeth," and watch the strong, swift flow of waters swollen by spring freshets, my heart throbs with a vain longing to add my shadowy to the innumerable other shadows that diversify a certain sunny exposure in the woods from slope to summit. But the chilliness in the air vetoes any such excursion at present. Therefore I must be content with a retrospect of a bright day in the spring that has gone, and hope for just such another in the spring that is here. The earliest vernal flowers bloom again; the snowdrop, emblem of hope, shows itself as the longer days encroach upon the night, and the yellow crocuses, sacred to Saint Valentine, the lover's saint,

"The first glint thing

That wears the trembling pearls of Spring,"

have awakened from their slumber lethargic state, and the borders are gray with the "cloth of gold." Surely some early wild flowers are in bloom in the woods now; at least the mosses, saturated by recent rains, are in all probability fresh and vigorous and green, while the lichens rejoice in the solitude of which they are the fit emblem.

It will not be a great while now until there comes the anniversary of a day on which four itinerant pleasure-seekers, bound together in a sort of quadrilateral friendship by those who at common purpose arrayed themselves—not altogether like "lilies of the field"—and armed with baskets and gardening trowels, betook themselves to sylvan scenes, a short distance from the common haunts of men.

The historian was the least but not the last of the party. The landscape was not new to her, and for that reason she was looked up to as a guide, philosopher and friend; by those who at common purpose arrayed themselves—not kept by her side, and at others formed exploring parties on their own followed. Our route for almost a mile lay along the railroad. The genial temperature of the air, the soft blue of the sky, the gleaming beauty of the water course, over whose sands and shallows the willows hung their pensive branches, all contributed to add to the lightness of hearts that were free from care, and seemed in those who at common purpose arrayed themselves—not kept by her side, and at others formed exploring parties on their own followed. Our route for almost a mile lay along the railroad. READING POSITION.
KENDALL'S SPAVIN CURE
is a sure cure for spavin, splint, curb, callous,
sprains, swellings, galls, lameness and all enlarge-
ments of the joints or limbs. It will completely
remove a bone spavin without blistering or caus-
ing a sore. It is also as good for man as for beast
and is used full strength, at all times of the year,
with perfect safety. Remember, we claim it will
cure a bone spavin and completely remove the
bunch without blistering.
Office U. S. Marshal, Western Dist. of Michigan,
Kalamazoo, Apr. 16th, 1879.
B. J. Kendall, Enosburgh Falls, Vt. Dear Sir:—I
received the two bottles of your spavin cure for-
warded by express in January last. I am happy
to state that it performed all your advertisement
called for. In three weeks after I commenced
using it, the spavin was entirely removed and a
valuable horse restored to usefulness.
Very truly yours, JOHN PARKER.
Send for illustrated circular giving Positive
Proof. Price \$1. 411 Druggists have it or can get
it for you. DR. H. J. KENDALL & CO., Prop'r.,
Enosburgh Falls, Vermont.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 "	.25	.50	1.00	2.00
Amount to remit us, 3 "	.75	\$1.50	3.00	\$5.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00
Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.	

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates. A copy of FOREST AND STREAM for one year. A three-piece double-ferule, lancewood fly, full mounted, polished Bass, Trout or Bait Rod.	Cove's Field Ornithology. One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks. One Russia-leather Fly-book, and one dozen assorted Flies.	One five-foot lancewood Bow, Horn Tips, and one dozen 25-inch Arrows. One pair Club Skates.
---	---	--

To any Person sending us, before July, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:

Two copies of Forest and Stream for one Year. A four-piece, double ferule, guides and reel-band, hollow, butt, extra tip, fly, full mounted, Bait or Brass Rod. One 3-piece do. Fly Rod.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Cove's Key to North American Birds.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickled-plated Club Skates. One Parlor Air-Gun.
--	--	--

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter, Address

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction, if the dog has all the natural instincts. References on application. Prices, \$50 and \$75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Georgia. Oct 2-17

MANGE.

SCRATCHES.
GLOVER'S IMPERIAL MANGE CURE is warranted to cure all kinds and conditions of mange or skin diseases of any nature on dogs or cattle without injury to the animal. One application is usually all that is necessary. For SCRATCHES in HORSES it has no equal. H. GLOVER, Sole prop'r Imperial Kennel, Tom's River, N. J. Agents: Conroy, Bisset & Malleson, 65 Fulton St., N. Y.; John P. Lovell & Sons, Dock Square, Boston; Jos. G. Grubb & Co., 72 Market St., Phila.; H. P. Taylor, 72 East Madison St., Chicago; Crookes, Hilder & Co., 404 North Fourth St., St. Louis. Price, 50 cents.

FOR SALE, CHAP—Pointer dog, ten months old. Address A. G. SPENCER, JR., Westerville, Conn. Mar 18-21

The Kennel.

Neversink Lodge Kennels.

The following celebrated Dogs are in the stud:

DOGS:

St. Bernard dog "Marco"; rough coated, two years old; a magnificent animal—Rev. J. Cunningham Macdon's stock—second prize Hanover Show and Rochester.
Newfoundland dog "Keeper"; four years old; first prize Westminster Kennel Show, 1879.
Pointer dog "Croxeth"; liver and white; one and a half years old; out of Lord Seton's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show.
Blue Belton setter, "Decimal Dash," eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.
Irish setter, "Rover II"; pure red; son of Macdon's champion "Rover." Never exhibited.
English setter, "Ranger II"; a pure bred Laverack, son of Macdon's celebrated "Ranger." His get won first at Hanover and Paris shows, and second at Puppy Stakes in Eastern Field Trials 1879.
Stud fee, \$25.00.

For Sale.

The get of the following thoroughbred Bitches:
St. Bernard "Braunfels," rough coated, out of Prince Solu's celebrated stock; a magnificent bitch, whelp to "Marco," 1st prize in Hanover and Rochester show.
Pointer "Queen," liver and white, 1st Westminster Kennel Show 1879, in whelp to "Croxeth."
Gordon setter "Beau," 1st Boston Show 1878, 2nd New York Show 1878.
Pointer "Duchess," liver and white, out of "Queen" and "Sancho."
Blue Belton setter "Silk."
Irish setter "Noya," out of Col. Hilliard's "Palmerston," in whelp to "Rover II."
English setter "Donna," white and lemon. Pups can be secured by an early application. Besides offer for sale pointers and setters of minor quality, but of good thoroughbred stock; full pedigree. Also, several puppies of champion "Queen," by champion "Sensation."
Having engaged the services of Macdon's renowned field trial breaker, I am prepared to book orders for thoroughly broken dogs, deliverable upon application. 1880. Particulars will be furnished on application to
A. E. GODEFREY,
Guymard, Orange Co., N. Y.

FIELD TRIAL DERBY OF 1880

THE first American Field Trial Derby will be run under the National American Kennel Club rules, about the third week in November, 1880, and place to be heretofore announced, for setter and pointer puppies whelped on or after APRIL 1st, 1879.
First Prize, \$150; Second, \$100; Third, \$50. Entries, Five Dollars each, to be paid at time of entry; Ten Dollars additional each for starters, to be paid before starting.
Entries, giving full particulars as to color, marking, sex, pedigree and name, must be made on or before APRIL 1st, 1880, to the Secretary of the National American Kennel Club. Any number of dogs, the property of one owner, can run for this stake. The names and pedigree of all the puppies entered will be sent to all the sportsmen's papers for publication. The forfeit money to be added to the stake and divided between the winning dogs in the same ratio or proportion as the stake is divided.

ENTRIES CLOSE APRIL 1st, 1880.

For blank forms of entry apply to
CHARLES DE KONGE,
Secretary N. A. K. C.,
(P. O. Box 924) No. 61 Broad St., N. Y. City.
Feb. 19-17

The "STANDARD TARGET." For Rifle Practice.
Size 6 inches. Bulls-eye 11 inches. Range, 100
feet, off-hand. The zones rise by area instead
of diameter.

Marksman will appreciate the new departure
which this target has inaugurated. The accurate
marksman now gets the true value of his shots,
while on old-style targets the record was so in-
fluenced by the element of chance as to give but a
vague idea of the shooter's skill. For instance,
on a 20 yard Creedmoor "center," scoring 4
has ten times the area of a "bull," scoring 1. Every
marksman knows that no degree of skill or care will
give immunity from occasional misses, and un-
der the old system it was almost the rule for good
marksman to be beaten by bad ones. One man
would pile up eight snug bulls out of ten, but
lose the other two, while his competitor, "shoot-
ing for fours," would center his shots all over the
board center, blunder one shot into the edge
of the bull, and win! Now in deer stalking, and
shooting at 50 yards the winner would have
wounded and lost one deer, while the loser would
have struck down eight, all shot through the
heart. Of course there are people who still con-
tend that under the old method "all had an equal
chance," which is very true. But it is also true
that their equality of chance would have
been in no wise impaired if they should have sat
down and thrown dice to determine who was the
better shot. In contests of skill every element
of chance should be eliminated.

Arrangements have been made for supplying
these targets at a merely nominal price, and it is
now an easy matter to gauge relative skill by
uniform practice, and to communicate definite
results without obscuring them by explanatory
details. The targets are mailed, post-paid to any
address in the United States at fifty cents per
hundred, and quite a liberal discount is made to
galleries and dealers. Send orders to CUSONS,
MAY & SHEPARD, Glen Allen, Virginia.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878,
by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious
effects of the OIL OF CASSIA are thrown off when burning is completely neutralized or destroyed,
and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advan-
tage and importance of this invention will at once be recognized by all smokers, and its truth de-
monstrated by the fact "Old Judge" Cigarettes they smoked. Neither will they require a printed
certificate from any eminent Professor of Chemistry to convince them they have heretofore, in
smoking Cigarettes made of PURB RICE PAPER, been inhaling one of the deadliest poisons known.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed,
if equalled, in the abundance and great variety of
fish contained.
BROOK TROUT abound in the streams, and
the famous AMERICAN GRAYLING is found
only in these waters. J. M. General Agent,
The GRAYLING Season opens June 1 and ends Sept. 1.
The TROUT season begins May 1 and ends Sept. 1.
BLACK BASS, PIKE, PICKEREL and MUSCA-
LONG, also abound in large numbers in the
many lakes and lakelets of this territory.
The sportsman can readily read trophies of his
skill to his friends or "club" at home, as ice for
packing fish can be had in many places.
TAKE YOUR FAMILY WITH YOU. The scenery
of the North Woods and lakes is very beau-
tiful; the air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are good, far sur-
passing the average in countries now enough to
attract the finest of tourists.
During the season Round Trip Excursion Tickets
will be sold at low rates, and attractive un-
limited facilities offered to Tourists and Sportsmen.
Dogs, Guns and Fishing Tackle Carried Free of
Owner's Risk.
It is our aim to make sportsmen feel "at home"
on this route. For Tourists' Guide (an attractive
illustrated book of 80 pages, containing full in-
formation and accurate maps of the Fishing
grounds and Time Cards, address A. R. LEWIS,
Gen. Pass. Agent, Grand Rapids, Mich.

Old Dominion Line.

THE STEAMERS of this Line reach
some of the finest waterfowl and upland
shooting regions in the country. Connecting di-
rect for China, Saigon, Cebu, Manila, and points
on the Peninsula. City Point, James River, Cur-
rituck, Florida and the mountainous country of
Virginia, Tennessee, etc. Round steamers sail
Tuesday, Thursday, and Saturday. Lower
Monday, and Thursday, at 2 P.M. Full information
from our office, 107 Greenwich Street, New
York.

Sportsmen's Boutes.

St. Louis, Minneapolis

AND

ST. PAUL SHORT LINE.

Through Pullman Palace Sleeping Cars
between St. Louis, Minneapolis
and St. Paul.

Burlington, C. Rapids & Northern
Railway.

QUICKEST, CHEAPEST AND BEST!

TWO PASSENGER TRAINS each day, between
Burlington, Albert Lea and Minneapolis,
crossing and connecting with all East and West
lines in Iowa, running through some of the finest
hunting grounds in the Northwest for Geese,
Ducks, Pintails and Ruffed Grouse and Quail.
Sportsmen and their dogs taken good care of. Re-
duced rates on parties of ten or more upon applica-
tion to Gen'l Ticket Office, Cedar Rapids,
Iowa.
R. F. WINSLOW, Gen'l Passenger Agent.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES

afforded by their lines for reaching most of the
TROUPE PARKS and RACE COURSES in the
Middle States. These lines being CONTINUOUS
FROM ALL IMPORTANT PORTS, avoid the dif-
ficulties and dangers of reconnection, while the ex-
cellent cars which run over the smooth steel
tracks enable STOCK TO BE TRANSPORTED
without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, PENNOCA, BED-
FORD, CHESSON, BALSTON, MINNEQUA, and
other well-known centers for

Trout Fishing, Wild Shooting, and Still
Hunting.

Also to
TUCKERTON, BEACH HAVEN, CAPT. MAY,
SQUAN, and points on the NEW JERSEY COAST
renowned for SALT WATER SPORT AFTER
FINN AND FEATHER.

DUPONT'S

RIFLE, SPORTING AND BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.
A quick, strong, and clean Powder, of very fine grain for Pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING."
FFG and FFGG. The FG for long range rifle shooting; the FFG and FFGG for general use, burning strong and moist.

DUPONT'S SPORTING, MINING, SHIPPING, AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder. U. S. Government standard. Powder manufactured in order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

J. L. KNEELAND, 70 Wall Street, N. Y.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square kegs of 1 lb. each.

Hazard's "American Sporting."

Nos. 2 (fine) to 6 (coarse). In 1 lb. canisters and 1/2 lb. kegs. A fine grain, quick and clean, for upland game shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 1/2 lb. canisters and 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

Attractions of Arkansas.

SECOND PAPER.

IN touching upon the river system of Arkansas, it will not be necessary to be very statistical. A glance at the map will show that the Mississippi River flows along the greater part of the eastern boundary of the State, and the Red River of Louisiana along a small part of the southwestern.

Beginning then in the northeast, we find first the St. Francis River, flowing out of the State of Missouri through low lands, cypress swamps, cane-brakes, etc., in a generally southerly direction, and emptying into the Mississippi. This river is navigable by steamboats for a portion of the year. It is stocked with all the coarser varieties of fish, and has some bass, and many perch of different varieties. Then comes L'Anguille, a sluggish and unimportant stream. Proceeding westward, Crowley's Ridge, a low range of hills, is crossed, and Cache River reached. It is a thin, chocolate colored stream, with innumerable "bottoms" and cypress swamps—all of which are, at certain seasons, filled to overflowing with dirty water. The stream rises in Missouri, and empties into the White River, in Monroe County. But for a railway bridge near the mouth, this stream would be navigable for light-draft steamers. The river is well stocked with fish, and flows through a notable game country, much of which is in its native wilderness state. Deer, turkeys and bears abound along the course of this river, and wild fowl in astonishing numbers visit its sloughs and shallows. A portable boat would be a great help in this region. Going still westward we come to the Black River, a fine stream of dark-colored water—properly named—rising in the mountain country of Missouri, flowing southward through the northeastern part of the State, and emptying into the White River at Jacksonport. The stream is rough and rapid in its upper course, and smooth, but not sluggish, in its lower. It is well stocked with game fish, as well as the coarser varieties, and there are some notable trolling places along its course. Both the main stream and its tributaries are noted for the hunting grounds in their vicinity. Wild

fowl, in their annual migrations, pursue the course of this river. The stream is navigable for steamboats most of the year to, and into, Missouri. Packets ply regularly as far as Pochontas, Ark. The "boss" of this line never neglects an opportunity to place a sportsman under obligations to him. Being of the fraternity himself, he calls it "being good to his own sort." At Jacksonport the Black River is joined by a stream of the clearest water in the State, one as well entitled to its name of White River as is the Black. This river rises in the Boston Mountains in the northwest corner of this State, and flows northeast into the Missouri, thence southeast again into this State, and eventually into the Mississippi. This stream is navigable, and actually navigated by steamboats to Batesville all the year, and as far as Forsyth, Mo., during the winter and spring months. It is abundantly stocked with game and food fishes. Its banks abound in good hunting grounds, and the mountain scenery along the upper waters is exceptionally fine, and worthy of far more attention than it receives. Tributary to this are several rivers of lesser note; as Little Red, Sycamore, Buffalo Fork, King's River, etc., all well stocked with fish, and all running through noted game regions. In White River and its tributaries, the Ohio River salmon or glass-eyed pike (*Stizostedion americanum*), the striped bass (*Morone chrysops*), and the croppie or speckled perch (*Pomoxys heuacanthus*), are taken in greater numbers than elsewhere in the State—or in the world for that matter.

In the southern part of the State, tributary to the Arkansas, are the Petit Jean (pronounced Petty John), and the Fourche la Pave (Fosh la Pav) rivers; and tributary to Red River are Little River, Washita, Bayou Moro, Saline, and Bayou Bartholomew. The most considerable of these, the Washita, is navigable for steamboats—as indeed are all the others to a somewhat less extent. It will be seen that this is preeminently a land of navigable streams—and consequently of steamboats—so that it is comparatively easy to reach any desired point in the State. To this may be added, fair railway facilities; but the prime favorite with the native population is the steamboat.

In the bottom lands, along the lower course of these rivers, and within the district covered by their annual overflow, is a system of lakes, lagoons, or ponds, usually lying low—anything but inviting in aspect—surrounded by cypress trees of large size, possessing and sending no long streamers of moss to intensify and set off their unspeakable dreariness. The sportsman soon becomes habituated to these gloomy scenes, and learns to find not only fish and game, but pleasure in exploring them. They usually have one bluff (but not very high), and one low or sloping bank. The high bank is not unfrequently covered with a luxuriant growth of cane, furnishing unlimited supplies of fishing-rods, as well as a hiding cover and concealment to the casual hunter. The lakes are generally supposed to be old river beds, and are uniformly of the width of the parent stream. They are resorted to by myriads of wild fowl in the winter months. Some of them are quite deep, and many are fed by cool springs at the bottom. These latter are exceptionally well stocked with fish. Concerning the system of lagoons, of which these form so considerable a part, I quote from good old "Uncle Tish" in the *Arkansas* Book, pp. 112—

"The lakes, as they are called (though they are more properly ponds), along the alluvial banks of the Mississippi become very low after a succession of dry seasons and the fish cease to breed in them; with, with excessive fishing with nets and hooks, almost depopulates those waters, but when a good rise in the river overflows the bottom lands, the ponds are swept of the low water and replenished with fresh fish, at the same time restocked with fish. Then it appears almost miraculous where the vast numbers of croppies, bass, perch and other fish come from, and there is no other way of accounting for this fact than by supposing that all the lakelets and streams of Wisconsin and Minnesota to the north, have thrown off their surplus production, which they appear to have garnered up."

To give an adequate account of the number, extent and resources of these lagoons would far exceed the allowable limits of this paper. I will only add that they are as a general rule stocked with our game fishes—pickrel, bass and perch, independently of the character of the parent stream. To illustrate: it is generally believed here that the Mississippi, the Arkansas and Red rivers do not present the conditions necessary to these fishes, and that they are consequently not stocked with them, as are the other rivers—the White, the Washita, etc. My own observations have satisfied me of this fact. The lakes along these streams, on the contrary, are well stocked with choice specimens of the bass and perch tribes. Indeed, the finest pickrel and black bass I have seen in the State came from a lake in the vicinity of Arkansas River, when not a specimen could be taken in that stream in a week's time. Both the Arkansas and Red rivers flow across the "plains" and are subject to the "red rise" at high water in the spring or early summer, when the waters are discolored by contact with some formation through which they pass. Assuming that this is the

cause of the absence of game fish from the main streams the Mississippi above the mouth of the Missouri should be stocked with them, and probably is.

To the geologist and the student of natural history, Arkansas presents a field full of rare attractions. But time and space alike are wanting to even touch upon them. I write in this letter only for the sportsman, and could I but set the lands on the dial-plate of Time back twenty-five years, then indeed might I hope to say something of interest to that class. That was indeed a "blissful and never to be forgotten age, when everything was better than it has been since, or ever will be again." In those days game was too plentiful to afford sport. The wants of the people were few and simple, and easily supplied. If meat was wanting, the man of the house would rise a little earlier than usual and repair to the woods with the faithful dog and the trusty gun. Early breakfast time would see him back again with the choice parts of a fat buck. At the approach of cool weather in the fall, a week or so set apart for that purpose would produce an abundance of animal food for the winter supply. Many are the tales of adventures with panthers, etc., happened upon in excursions after the more useful animals of the chase. Occasionally the animals classed as "varmints" becoming too numerous for comfort, neighborhoods would turn out to destroy them, and thus keep them within proper bounds. The soil, generous to a fault, yielded a most disproportionate reward to the labor invested. Cattle and hogs came on space, with no other care than they were able to bestow upon themselves. Sheep, however, seem never to have thrived, and never have been able, even unto this day, to gain favor in the eyes of the people, owing probably to a mistaken notion that they bite and worry the dog! However, as I have already remarked, the wants of the people were few and they were happy. Money, that great corrupter of human morals, was not in all the land. The unit of currency, the dollar of the Arkansas daddies, so to speak, was the skin of the deer. Change was made in coin-skins and the aristocratic five and ten dollar bills were represented by the outward coverings of the bear and the beaver. Even taxes were paid in this currency. "Bug-juice" was obtained and used in moderation—on account of the malaria—and that custom is honored even unto this day.

I have spoken of the Boston Mountains in the northwestern part of the State. Whether these elevations on the fair face of the State were named for the "Athens of America" and the "Hub of the Universe," is not now to be even conjectured. One thing, however, is certain, the "Athens" of Arkansas and the seat of her only University of learning, the town of Fayetteville, is in the very heart of these mountains, and all the region round about boasts of the culture and refinement of her people. It is in these mountains that the scene of the story of the "Arkansas Traveler" is laid, a story from which it is said the general impression of the people of our State is almost wholly derived. This story has been in print and may be familiar to many of your readers; to many of the younger, however, it will be new. I have procured a copy from B. S. Alford, Esq., formerly of Little Rock, Ark., now with his brothers, A. & G. Alford, 22 S. Calvert street, Baltimore, Ark., gun dealer, who kindly gives permission to publish.

"Col. Sandy Faulkner, the original 'Arkansas Traveler,' was born in Georgetown, Scott County, Ky., March 2d, 1803. He came to Arkansas in 1829, and settled in Chicot County, on the Mississippi River, as a cotton planter. In 1833, Col. Faulkner (with his father, the late Nicholas Faulkner, a Virginian by birth) took up his residence in Little Rock, where he died August 4th, 1874, at the age of seventy-one years.

"It is well known throughout the Northwest that Col. Faulkner was the original personator of the 'Arkansas Traveler'; it was his pride to be known as such. The story, it is said, was founded on a little incident which occurred in the campaign of 1840, when he made the tour of the State in company with the Hon. A. H. Sover, Gov. Fulton, Chester Ashley and Gov. Yell. One day in the Boston Mountain, the party approached a squatter's for information of the route, and Col. 'Sandy' was made spokesman of the company, and it was upon his witty responses the tune and story were founded. On return to Little Rock, a grand banquet was given in the famous 'bar-room' which used to stand near the Anthony House, and Col. 'Sandy' was called upon to play the tune, and tell the story. Afterward it grew into a popularity. When he subsequently went to New Orleans, the fame of the 'Arkansas Traveler' had gone ahead of him, and at a banquet, amid clinking glasses and brilliant toasts, he was handed a violin by the then Governor of Louisiana, and requested to favor them with the favorite Arkansas tune. At the old St. Charles Hotel a special room was devoted to his use bearing in gilt letters over the door, 'Arkansas Traveler.'"

A lost and bewildered Arkansas traveler approaches the cabin of a squatter, about forty years ago, in search of lodgings, and the following dialogue ensues, the

squatter all the time fiddling the first bars of a tune over and over again, between each question and answer.—

Traveler.—Halloo, stranger.
Squatter.—Hello, yourself.
T.—Can I get a little light with you?
S.—No, sir; you can't get to—
S.—Have you any spirits?
S.—Lols av' 'em. But one last night, by that ar ole hollar gun, and it nearly skeered her to death.
You mistake my 'em, but Ole Boss he got in and lapped all av' it out'n the pot.
T.—You don't understand; I don't mean pot liquor. I'm wet and cold and want some whiskey. Have you got any?
S.—Oh yes—I drunk the last this mornin'.
T.—I'm hungry, but had a thing since morning; can't you give me something to eat?
S.—Hain't a durned thing in the house. Not a mouffull av' meat, nor a distil av' meal here.
T.—Well, can't you give me horse something?
S.—Got nothin' to feed him on.
T.—How far is it to the next house?
S.—Stranger! I don't know, I've never been 'thar.
T.—Do you know who lives here?
S.—Yes, air.
T.—As I'm so bold, then, what might be your name?
S.—It might be Dick, and it might be Tom; but it lacks right smart av' it.
T.—Sur I will tell you where this road goes to?
S.—It's never gone any whar since I've lived here. It's always thar when I git up in the mornin'.

T.—Well, how far is it to where it forks?
S.—It don't fork at all, but it splits up like the devil.
T.—As I'm not likely to get in any other place, can't you let me sleep in yours, and I'll tie my horse to a tree, and do without anything to eat or drink?
S.—My horse licks. As I'm the only one dry spot in it, and me and Sal sleeps on it. And that 'thar tree's the ole woman's persimmon; you can't tie to it, 'case she don't want 'em shuck off. She 'lows to make beer av' 'em.
T.—Why don't you finish covering your house and stop the leaks?
S.—It's been rainin' all day.
T.—Well, why don't you do it in dry weather?
S.—It don't leak then.
T.—As there seems to be nothing alive about your place but children, how do you live here anyhow?
S.—Putty well, I thank you. How do you do yourself?
T.—I mean what do you do for living here?
S.—Keep tavern and sell whiskey.
T.—Well, I told you I wanted some whiskey.
S.—Stranger, I bought a bar'n here, we only had a bit betwixt us, and Sal she don't want to use her'n fast, nor me mine. You see I had a spiggin in one end, and she in t'other. So she takes 'em out'n my hand and she takes the bit for it; then I'd take up an o'bern, and give her the bit. Well, we's getting long last-rate, till Dick, durned skink like she is, she took the whole of the bottom to shuck at, and the next time went to buy a drink, they went none thar.

T.—I'm sorry your whiskey's all gone; but my friend, why don't you play the balance of that tune?
S.—It's got no balance to it.
T.—I mean you don't play the whole of it.
S.—Stranger, can't you play the fiddler?
T.—Yes, a little, sometimes.
S.—You don't look like a fiddler, but if you think you can play any more onto that fiddle, you kin just try it.

(The traveler takes the fiddle and plays the whole of it.)
S.—Stranger, tuck a half a dozen cheers and got down. Sal, air yourself round like a six-horse team in a mud hold. Go round in the boiler whar I killed that buck this mornin', out off some of the best pieces, and fetch it here, and make us this gentile man, d'rectly. I raise up the board under the head of the bed, and git the ole black jug I hid from Dick, and gin us some whiskey; I know that's some left yit. Till drive ole Boss out in the bread-tin, then climb up the lofts, and get the rag that's got the sugar in it. Dick, carry the gentleman's horse round under the shead, give him some fodder and care, and make him kin eat.
T.—Lads, then, I'll be a buff for to set the table.
S.—What's big butcher, little butcher, ole case, cob-handle, granny's knife, and the one I hanged yesterday? That's nuff to set a gentleman's table, outer you're lost um. Durn me, stranger, if you can't stay as long as you please, and I'll give you plenty to eat and drink. Will you have coffee for supper?

T.—Yes, sir.
S.—I'll be glad if you do, tho', we don't have nothin' that way here, but I trust you'll make it out.
T.—Precious! Play away, stranger, you kin sleep on the dry spot to-night.

T.—(After about two hours' fiddling.) My friend, can't you tell me about the road I'm to travel to-morrow.

T.—To-morrow! Stranger, you won't git out'n these diggers for six weeks; but when it gits so, you kin start, you see that big ole over thar? Well, you kin get to git crost that; then you take the road up the bank, and in about a mile you'll come to a two-acre acorn't mound, and ride on. About a mile and a half or two miles from thar, you'll cum to the damdest summer you ever struck in your travels; it's boggins good to mire a saddle-blanket. Thar's a fiddle and a half a foot under thar.
T.—How am I to get at it?
S.—You can't git at it nary time, till the weather stiffens down sun. Well, about a mile beyond, you come to a place whar thar's no roads. You kin take the right hand if you want to; you'll foller it a mile or so, and come out in the lofts, and you kin back to you. You may know you're wrong, for they ain't any road thar. You'll then think you're mired here, and you kin mire a saddle-blanket to your house, whar you kin cum and play on that ar tune as long as you please.

Alas, times change and men change with them. The Arkansians of to-day would scarcely be recognized by those worthy old campaigners.

YELL.

A DAY IN THE WOODS.

FIRST PAPER.

It was late in mild October, and the long autumnal rain had left the summer harvest fields all green with grass again; the first sharp frosts had fallen, leaving all the woodlands gay with the hues of summer's rainbow or the meadow flowers of May.

Through a thin dry mist, that morning, the sun rose broad and red. At first a rayless disk of fire, he brightened as he sped; yet, even his noonday glow fell chastened and subdued. On the cornfields, old orchards and sordid pictured wood.

"And all that quiet afternoon, slow sloping to the night, He wove with golden shuttle the haze with yellow light; Staining through the painted beeches, he glorified the hill; And beneath it poured and onward lay, brighter, greener still."

The summer grains were harvested; the stubble fields lay dry. Where June winds rolled, in light and shade, the pale green waves of rice. But still, on gentle hill slopes, in valleys fringed with wood; Ungathered, bleaching in the sun, the heavy corn crop stood.

J. G. WHITMAN.

It was a few days later than America's poet has described, for the dim, smoky twilight of the last October evening was gradually settling down over hill and meadow; leaving but a thin shred of crimson visible above the horizon, as we drove up in front of Bill Simpson's cottage, situated upon one of the prettiest knolls and most picturesque pieces of rural scenery in Suffolk County.

Never shall I forget the first day my old friend Thorpe drove me from the railway station up hill and down dale, through cedar groves, and by the courses of purling

streams, and when, completely overflowing with sentiment, I could no longer suppress my thoughts of admiration, as the wagon swung suddenly around a wind in the road, and the old, shaggy, snowed coat met my eye. I faltered, for little indeed was my expectation, at the pace at which we were rattling along, of halting so abruptly, when, where should he (to fully express the idea), where should he "dump" me, but right down in front of this same little gate. It swings yet upon its rusty hinges at the same entrance which has so often welcomed us, and as often furnished us a means of exit for Pine Nock, or "Pain," or "Pain."

The byre, barns, corn-crib and out-houses, are overrun a little more with lichens; and the same lusty oaks nod dreamingly to the listless winds; the pond is just as full, and Tom's mill gings away far into the night the same as upon the evening of my first visit. Though some years ago, it seems but yesterday that we sat around the hearth in that ancient kitchen, revelling in great expectations, some of which were never realized.

Faithfully, indeed, do I remember that cool October evening. There were four of us; and we had come one hundred miles to shoot quail among the buckwheat heaps and corn shocks. Our host was awaiting our arrival, and after making the usual courtesies, grasping him by the hand, I know not how many times over, removing the baggage from the wagon and putting up the horses, we stalked in Indian file into the snug little dining-room to honor a repast, tight and savory whiffs of which would have tickled the cockles of the heart of an alderman. And honor it we did, for we had not supped for five long hours, and the drive (after leaving a miserable, creeping train) up through the beautiful country had sharpened our appetites amazingly.

As I recall that romantic event I sometimes think we did behave indecently, but then it was, there to be eaten, and that's all there was to it, and we've done the same thing repeatedly since. But, adjoining from the remaining fragments of what once bore the appellation of sheldrakes, a hunt was instituted for the pipes. And after that, again we repaired into the sitting-room before a tremendous mass of crackling logs, which filled a fireplace eight feet long, from whence issued a bright but quivering glow upon the objects in the room, not forgetting four or five of the guests.

The Wilson boys are coming up to-night and Oscar will be over directly. I told them you were coming down. But George Wilson has lost Major. He was shooting at some coots off shore from the bank—the day before yesterday, I think it was—and Majie jumped over his head just in time to meet the load out of the gun!—interrupted our host, in a low tone, as he came into the kitchen. This singular coincidence was the subject of various remarks, both humorous and sympathetic, for Major was a good dog, and his singular death was received, I am sure, with a feeling of regret.

"Bob" sang "May the Pipes and the Bowls never leave us," at the conclusion of which the door flew open its full swing, and in walked the trio who had been listening outside. Then there was a greeting.

"Repeat, and I'll add it to these fellow sit down, their look pulled, are there many quail, Oscar?"

"There more than this crowd could shoot in six months. I was almost tempted to try my hand to-day, but I don't know, somehow I didn't."

"That's good. I'm glad you did not. It would not pay any man, in my estimation, to break the law, even for the sake of one day, and then you might be caught, and then hauled."

"Be hauled up before Bisgood to pay for the privilege. Saucy penny now that's I, reckoon," said Will Wilson, as he drew further from the blazing fire.

"What's the penalty for shooting a dog?" chimed in Henry, derisively, over which there was a tremendous laugh at the expense of poor George, who laughed louder and longer than the rest. I do not really believe I ever met him but that he was laughing; and to be sure he repeated such a horsey way, though laughing all the while, that every one of us concluded that it was a sheer accident.

"I thought it was a ghost at first, when I saw the white thing fly over my head, but then I don't very often get scared at them."

"No, George, do not allow such things to make a false impression on your mind. There's no such thing as ghosts, although your hair would stand at the recital of some stories my father would tell to me when I was a mere boy, and many a night have I gone trembling with fear to bed while he would laugh at the ignorance of believing in such absurdities."

"There is one story in particular which would always strike terror into me. 'Twas about an old man named Nevill, whom, after his demise, would be seen walking around his domain, grim, gaunt and lean."

"Let's have it," was the unanimous request.

"Well, if I can tell it straight, though I cannot attempt to spin it as the old man can."

"Bob, give me some of that tobacco, and then I'll go on, and after that every mother's son to bed, if we mean quail in the morning."

"Well, to begin with, my father was born in a country famous for its poets, orators, statesmen, military heroes, and a race of men whose wit was blended nearly every nation on earth. (Applause.) My father was a farmer, but he had but the two sons, viz. Johnny and Willie. I'm named after the latter. He was a gardener and had all the gentlemen's gardens to keep in Dublin and adjacent towns. The dame died when the boys were quite young, and he having so much flora and horticulture to attend to, and desirous of giving the lads a good education as well as keeping them under the eyes of a whole-some professor, was determined to send them from home. As I said, their mother was dead, and to effect the scheme the old man sent the boys off to a Mr. Cox, who kept a grammar school in a place called Bansa, which was about twenty-four miles from their home, in Urlingford. They would come home about once a month. Sometimes they'd walk, or if they met any one coming to town they could easily get a ride for "two pence-happenny" (five cents). But one summer evening they started for home, four of them. The two brothers, a lad named Morrissey and another named Larry. They walked along the beautiful road, bedecked as it was with the cowslip and oxalis, discussing a problem from Hawney's "Mensuration," and never looked over nor heather until they got to the turnpike which led to Nevill's, though at that time they

knew very little of the place or the ghastly legends attached to it.

"In due time they came to the castle, with its unglazed, long, narrow windows and walls overrun with ivy; some of the turrets knocked off, and long crevices between the stones; together with the pond with its closely tangled, dappling bower that had grown and interwoven for years and given to the place a weird and lonesome appearance."

"Across the pond was the old fellow's mill, which, though the water was still running, had not given a grind for many a day. Around the whole was a high, crumbling wall over which in many places the ivy grew or straggled through a crevice; and around outside the wall were beautiful tall trees which over-arched the long avenue that environed the grounds."

"Jack Larry used to tell how he went to Nevill's one night to steal wood. And how he succeeded in getting the stick of timber nearly to the way over, and then wondering why it wouldn't slide over the wall, looked up and saw old Nevill disputing the theft at the other end—the brazen liar." "And was Nevill dead?" asked George Wilson. "Dead! Why man, he was dead forty years. But long after his death he used to be seen walking in his grounds or riding on his old gray horse inspecting the fox covert, the deer park, etc., but, the boys."

"People often pay dear to gratify their curiosity. Nothing should be but they must go into the old stone mill. Ned Flynn said he wouldn't go into that mill for a transport—to heaven. There it was, weird and vacant-looking, with all the indelible wear of time. The great stones for grinding; the hopper and all the equipments; the long, steep, winding stairs, and in one corner lay a great heap of old sacks which, no doubt, bountiful care had piled up, and which now the boys swore were filled with ghosts; and in short everything was there just as Garrett Nevill left them, for he worked the mill after his brother Robert's death."

"The moon began to rise, and the long, silvery shadows crept in through the tenantless lancet windows, casting here and there a flick of discernment upon a dusty object. Drowsiness came over them, and they dropped off the seats, another into the—I was going to say into the dreaming arms of Morpheus, but into no such benediction did they settle, not even into soothing oblivion."

"How long they had been asleep I never could find out, but Larry was the first one to wake, then Johnny. But they could not move hand nor foot, scarcely breathe, and to their terror everything was dark as a dungeon. The moon, whose fleck had thrown a little romance about the place, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The mill went on gaining in rapidity, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old machinery, and sure enough they were. In a twinkling the mill began to jig and hum at a most terrible gait. Natural History.

GIANT LIZARDS OF THE JURASSIC.

Far away to the westward, on the flanks of the Rocky Mountains, is the burial-place of a race of giants. Stretching along the base of the rugged and frowning mountains for miles upon miles, embracing in its wide extent every variety of country, lonely and rarely trodden by the foot of man, it is a fit resting-place for their huge race about which history and tradition are silent. The enormous buttes which at intervals rise in massive proportions above the level of the surrounding plain, might be taken for huge tumuli erected by savage race in memory of their dead, as the mounds of the Mississippi Valley were built to commemorate their departed, by the strange people who have left these works behind them as their only monuments.

And, indeed, the analogy less forced than might be imagined; for, if we dig into these buttes in the bad lands of the West, we often find them filled with the bones of this extinct and unknown tribe, just as in the mounds of Ohio we find the remains of the mound-builders. But how different are the relics which are uncovered. In the one case are brought to light a few crumbling human bones, some cinders and charred sticks, a dozen copper beads, with a few broken arrow-heads and perhaps some fragments of pottery; in the buttes of the Jurassic Rocky Mountain region, the bones that are unearthed are huge and black, and are turned to solid rock. So enormous are they in many cases that to lift one of them would tax the strength of the stoutest man, and some of them would weigh many hundred pounds. Great femora, six feet and more in length and eighteen inches in greatest diameter, vertebrae eighteen inches across and ten in length, pelvic bones as large as a table, and shoulder-blades four or five feet long and two feet across, are some of the *reliquiae* uncovered by the explorer. The remains of a single skeleton may weigh several tons, and the bones are frequently found in as perfect a state of preservation as though they had been covered up but yesterday. Sometimes, it is true, they are extensively cracked and broken by the enormous pressure to which they have been subjected by the superincumbent earth for so many millions of years; but even in such cases it is possible, by careful collecting, to piece them together so as to obtain not only an accurate idea of their form, but even their exact dimensions. With the enormous bones referred to are found others of more moderate dimensions; but, as a rule, the remains buried in these deposits belonged to creatures of great size.

Mesozoic time has been well called the age of reptiles, for it was during this period of the earth's history that reptiles were the dominant type, and flourished in marvelous profusion, being not less remarkable for their numbers than for the great variety of forms which then appeared. Among these reptiles perhaps no group was more strange—certainly none was more interesting—than the order termed the *Dinosauria*. They were strange on account of the great difference in size which existed between the various forms of the order, for certain of the genera are the largest animals known to have lived on land, while others were no larger than a cat, and they are of especial interest to the anatomist, because through them we are enabled to connect two at present widely separated classes—the birds and the living reptiles. Dinosaurs occur abundantly in Europe as well as in America, and many species have been described from the Mesozoic deposits of England and Germany. The bones of these animals have been found in considerable numbers in the cretaceous deposits of New Jersey, and in one instance in the so-called Jura-Trins of Massachusetts. Though the remains of Dinosaurs are very rare in the deposits of the Connecticut Valley, evidences of their presence are numerous. These consist of the footprints of the animals made in the sand or mud of the sea-beach or the shore of the estuary on which they lived, and these impressions having been covered up by subsequent deposits and hardened, have remained to this day indelible witnesses of the number and variety of the huge beasts that made them. Many of these tracks are three-toed, and bear some resemblance to the tracks of birds, and it was for a long time supposed that all the three-toed footprints were made by animals of this class; and as some of these footmarks were no less than twenty inches long, much speculation was indulged in as to the character and habits of the supposed enormous bird that made them. Recently, however, it has been shown that many of the Dinosaurs have three toes on their hind feet, and further, in connection with almost all the three-toed tracks, have found impressions of very small four or five-toed feet, showing that the three-toed tracks were made by animals that habitually walked on their hind legs, and only occasionally lowered their small fore feet to the ground. This state of things precisely agrees with what is known of the structure of the Dinosaurs; and hence, in the absence of any direct evidence that the tracks were made by birds, it is only fair to assume that they belong to Dinosaurs.

This order of reptiles has been divided by anatomists

into five groups. The sub-order *Sauropoda* includes animals of great bulk which habitually walked upon all four legs, as indicated by the nearly equal size of the fore and hind limbs, and in which the long bones were without any cavities for the marrow. The *Sauropoda* appear to have all been vegetable feeders, as shown by their teeth, and were great, slow-moving, unwieldy creatures of very low intelligence. The *Ornithopoda* were another group of herbivorous Dinosaurs, but differed widely from the *Sauropoda*. The fore limbs were much smaller than the hind limbs, and the latter present many points of resemblance to the legs of birds. The carnivorous Dinosaurs, of which *Megalosaurus* of England may be regarded as typical, constitute another division of this order. They were of smaller size than the *Sauropoda*, were more lightly built, and were thus more active and better fitted for capturing their prey. The fore limbs were much reduced in size, and the usual mode of progression appears to have been by walking or leaping on the hind limbs. The teeth were serrated and keen and trenchant, and the feet were armed with long, sharp claws. The carnivorous Dinosaurs, no doubt, preyed upon their larger but more sluggish herbivorous cotemporaries.

A fourth sub-order of Dinosaurs is the *Compsognathia*. These were animals of small size, and were in many respects very bird-like in structure. They had long necks, long, light heads, somewhat resembling a bird's, the jaws armed with teeth, and had the femur, or thigh bone, shorter than the tibia, or shin bone. The forelimbs were very small, and the hinder ones large. This sub-order has but few representatives, but it is probable that the American genus *Nanosaurus* belongs here.

Another very remarkable group of Dinosaurs were the *Stegosauria*. These were of great size, and had large fore and hind limbs, the latter, however, being the longest. The head was very small, the tail very large and long, and the animal was protected against the attacks of its enemies by an armor of huge bony plates and by great horn-covered spines, some of them over two feet in length.

It is difficult for us to understand, in the present state of our knowledge, just how these strange creatures, so different from anything that we now know, lived, and equally so for us to attempt to picture to ourselves their surroundings and their contemporaries. Life was abundant at this epoch, and extremely varied. Small mammals, almost the first of their kind, had appeared, but the largest of them scarcely exceeded in size the weasels of to-day, and all were probably marsupials. There were also crocodilians and turtles in great abundance, and strange fishes, of the genus *Ceratodus*, one representative of which still lives in Australia, inhabited the waters about the shores of which the Dinosaurs dwelt in such abundance. Vegetation was luxuriant and the climate was tropical in its warmth. It is very probable that in America pterodactyles were also abundant, as they certainly were in Europe. One fragment of a pterodactyle has, indeed, been described from the Jura of the Rocky Mountains, but the rock in which the Dinosaurs are found is not well adapted to the preservation of such delicate bones. It is also likely that birds were represented here, though of this we have as yet no evidence. But the presence in rocks of this age in Europe of the strange *Archaeopteryx* warrants us in supposing that the pterodactyles were not the only inhabitants of the air.

Such were some of the features of the animal life in this country during Jurassic time, though we have been able to touch only in the briefest manner on some of its most marvelous facts. In its abundance and variety it is even more interesting than in differences between the forms then living and those now upon the earth.

Many facts will be required before we can gain an adequate conception of the marvels of this long past age, but the hints which we already have indicate that the story, when told, will be a most interesting one.

NOTES.—We have recently received the *Monthly Journal* of the Virginia State Agricultural Society, which contains, together with a number of other interesting articles, a sketch on "The Beaver in Virginia," by Mr. Richard Irby, of Ashland, Va. The article though brief is interesting, and in view of the frequent queries by our correspondents as to the abundance of the beaver in the South, we do not hesitate to recommend it to them. So far as the author speaks of what he himself has observed the article is, of course, perfectly reliable and trustworthy, but we venture to suggest that the same cannot be said of his quotations. The statement by a recent writer in *Wide Awake* that the beavers, in the construction of their dams, transport mud from place to place upon their tails, "which are broad and flat," is especially open to criticism. We had supposed that this and its companion story, that these "ingenious and intelligent animals" use the tail as a trowel for pressing and smoothing the mud on their dams, had long since been relegated to the limbo of fable. We confess that the statement that the Northern beavers employ their dams as habitations is also new to us, and we are at a loss to know from what authority Mr. Irby quotes.

The explanation given of the reappearance of the

beaver in streams which flow into the Chesapeake is very interesting, and we are glad that the facts in regard to the point have been put on record.

Mr. H. W. Henshaw's ornithological report to Capt. George M. Wheeler upon collections made in portions of California, Nevada and Oregon, which is published in the report of the Chief of Engineers for 1879, is an extremely valuable pamphlet. The region examined by its author "amounted practically to a continuous line from Carson, near the western border of Nevada, and a little south of the Central Pacific Railroad, to the Dalles, on the Columbia River," and the work extended over the summers of 1877 and 1878.

A region so interesting, when explored by such an ornithologist as Mr. Henshaw, could scarcely fail to furnish very interesting results, and the annotated list of one hundred and eighty-four species which he has given us fully justifies our expectations. The notes on the habits of many little known species are very full, and add much to our knowledge of the bird life of the Sierra Nevada and Cascade ranges. For the important conclusions which the writer reaches, we must refer our readers to the pamphlet itself. It should be in the library of every ornithologist.

We wish to call the attention of the readers of this column to the very interesting report of the Commissioners of Fisheries of the State of Maine, to be noticed in our Fish Culture column. Messrs. Stillwell and Smith have set about their work with vigor, and their efforts are already bringing forth good fruit.

Professor A. E. Verrill, of Yale College, has recently published in "The Transactions of the Connecticut Academy" a portion of his most important and valuable paper on "The Cephalopods of the Northeastern Coast of America." So far as published (Part I.), it treats of The Gigantic Squids and their Allies. This part is illustrated by twelve plates.

The subject is a most interesting one, and the paper well worthy of the subject. It is our intention, if the demands upon our space will admit of it, to give some extracts from Prof. Verrill's article at an early day.

PARASITES IN A DUCK'S FLESH.—*Editor Forest and Stream*.—Through the kindness of a professional colleague I had the opportunity of examining a wild duck (mallard) a few days ago, which was, I think, of sufficient interest to warrant the begging of a few lines of your valuable space. The duck was infested with a large number of encysted parasites of the same general nature as the trichina found in the muscles of pigs, *i. e.*, an encysted form of entozoa. It had been bought in the market by a gentleman, but when his cook came to prepare it for the spit, she noticed an unusual appearance of the flesh of the breast, the skin being torn in one place, and called the master's attention to it, and it was by him submitted to my friend. The duck was infested out a piece cut from the heart to the Zoological Museum at Cambridge, was kind enough to send the bird to me, knowing that I was interested in everything pertaining to field sports. The muscles of the duck were crowded with the encysted parasites, more especially the pectorals, and they seemed to be more numerous at the surface, *i. e.*, just under the skin. The cysts were from 5-20 to 5-30 of an inch long by about 1-30 in width, being all very nearly of the same dimensions. They may be described as cylindrical, or rather bluntly rounded off ends, about the color of fat, or rather light-colored butter, and were imbedded in the muscles, between the fibers, with the long diameter parallel with the muscular fibers. I cannot think of any better well-known object to which to compare them than the pieces of that form of Italian paste which we call vermicelli. Their number may be appreciated, when I say that in the space of a square inch, on the breast, the skin of which had been stripped off, fifteen were seen on the surface. I have it at second hand, that Prof. Hagen, of the Museum at Cambridge, states that they are cysts of *Psorospermia*, the immature, encysted stage of the *Gregarina*, and that he has never before known of these entozoa being found in the muscles of birds. If these parasites are capable of development in the intestinal tract of men, it ought to be known, as from the semi-cooked state in which we eat our ducks, the cysts would be very apt to be ingested without having their vitality destroyed. On the other hand, if as large and as numerous as in the specimen I saw, nobody, with their eyes open, could fail to notice the presence of unusual bodies. My object in making this communication is twofold: First, to get any scientific knowledge on the subject, and second, to find out from the sportsmen whether the presence of these parasites has been previously noticed in ducks. So far I have not been able to hear of any similar case.

Boston, Feb. 25th.

MIC-MAC.

Through the courtesy of Dr. Hagen we have received the following notes with regard to these parasites, which will be read with interest by all sportsmen:—

CAMBRIDGE, Mass., March 20th.

Editor Forest and Stream.—

The flesh which I have seen from the mallard duck contained cysts filled with what is called *Psorospermia* in an exceedingly large number. So far as I know, such flesh is only disgusting, but not unhealthy. *Psorospermia* are very common in man—perhaps one in ten or even more—but never so large as in the duck.

I received yesterday bear flesh from the market. It contained in the cellular tissue next to the skin cysts containing thin white worms, four inches long and less than one-twelfth thick. This is a very interesting parasite, described in 1873 by Fr. Redi, Italy, and since seen by nobody. Rudolphi quotes it as *Strongylus ursi*, and Diering as *Nematodidum*, but both only after Redi's de-

DR. H. A. HAGEN.

A PRACTICAL FISH CULTURIST.

WASHINGTON, D. C., March 19th, 1880.

Sincerely yours,

SPENCER F. BAIRD, Commissioner.

SAMUEL N. NORTON,

Secretary Salmon Fishermen's Association of San Francisco.

UNITED STATES FISH COMMISSION.

CHARLESTOWN, N. H., March, 11th, 1830.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

--New Yorkers will find good trout fishing in the streams of Sullivan County. The man who goes to Isaac W. Bradley's, at Eldred, will be sure of a basketful that will repay him for the time and expense incurred. Deer are to be had there in season.

WAWAYANNA FISHING CLUB.—At a late meeting the following officers were elected:—President, Shepherd F. Knapp; Vice-Presidents, James A. Flack and Charles Banks; Secretary, Robert E. Van Wyck; Treasurer, William C. Connor. After the meeting the members were treated on a delicious feast. In an appropriate speech by Col. Lee, in behalf of the club, President Knapp was presented with a full-length portrait of himself, done in crayon by Ludovico, and measuring nearly five feet by four. The picture will remain at Case's until the opening, early in the summer, of the club-house on Crabtree Island, opposite Fire Island.

GRAYLING FISHING.—*Chitago, March 20th.*—Gentlemen who live in Ohio, Indiana and adjoining States, and who visit Michigan for some trout fishing, should stop off at the little town of Tustin, on the G. R. and J. R. R. Near this place is a small stream, called Pine River, that flows into the Chitago River, and is one of the best places for the great grayling stream of Northern Michigan, one may expect the streams connecting with it will also contain grayling. These fine fish are found in great numbers in this Pine River, which can be easily reached, because the road to the mouth of the river is only a few miles from the village, wagons can be secured at very reasonable rates, and guides will take you to the best fishing points on the stream. Camping parties would find good camping grounds, good fishing and obliging men to serve them. Should any desiderata of information let them write, or send a stamped envelope, to Mr. J. W. Mosher, of Tustin, Oscoda County, Mich., who will willingly give them all the information they require. Mr. Mosher is a fisherman, though a professional gentleman, and would secure guides for any one desiring to visit this stream. I have been fishing here for several years, and I can assure summer's fishing remember this place, and make preparations to take in some fine grayling.

VARNISHED FLY-RODS.

rather an uncertain subject, and opposite positions can be taken and seemingly maintained upon almost any question of either science, until the crucial test of practical experience proves their truth or falsity. The fact is that fish are not frightened by flashes of light or the reflections of bright objects, but, on the contrary, are attracted by them; any one who has ever fished by torch-light, or trolled with a bright metal spoon, can testify to this, and there is a method of fishing practiced by the natives of the coast of Japan, in which a board is attached to a boat at such a height that the light of the moon upon the water when the fish, attracted by this, jump upon the board as the boat is moved along. That fish are not much disturbed, if at all, by the flash-

Split bamboo rods must of necessity be varnished to preserve their elasticity and beauty. Think of a delicate split bamboo tip coated with sky-blue paint! The very thought is heresy, and an offense against the eternal fitness of things that would make even the spots on a brook trout blush more deeply crimson. American split bamboo rods are the finest made rods in the world, and the makers of them are the best. The following manufacturers fully attest this fact, and show, moreover, that they are duly appreciated abroad, as well as at home, highly varnished and flashing though they be. The coming Fishery Exposition at Berlin will prove the superiority of American rods beyond all peradventure.
